Of course on can. MagiC or MiNT plus HDDRIVER give you more than 23
partitions.

15-20 GB is not so big issue to partition.
But with some new disk you are forced to make some other partition
types than FAT16. Then we coming to FAT32, Ext2.

I partitioned 160GB drive to some 10 FAT16 and couple FAT32 parts.. It works flawless in Windows XP, but with Mint I had troubles. It looks that we have some limits around 32GB, but it depends from cluster size too. Above that limits different errors appear. Has someone positive experiences with verz large FAT32 partitions and Mint?

OK, it seems I didn't explain the problem correctly.
One can partition a disk in whatever the number one want and use
it without any problem either with MagiC! or MiNT. Mine worked
fine for a couple or years.
But then, for installing MiNT, I needed to convert a partition
to LNX, which is quite easy with HD-Driver : just select "Change
partition type" from the menu bar, then click on the drive you want
to work on, and it dispalys the current partitions scheme, total
disk, used and free space along with the drive name and model.
This indeed behaves this way for up to 15 partitions - I checked
yesterday -, but with more than 16 partitions it definitley makes
the system freeze, even if you only try to repartition the drive.
- if you simply want to repartition, the partition scheme is totally
  wrong, displaying an impressive number of partitions of random
  sizes, and erroneous data. For instance, when I divided a 4 GB -
  yes, I did wrote 4 GB, it isn't a typo! - into 17 partitions of
  235 MB, restarted the system, then tried to partition it again, It
  displayed 26748653 as the capacity, 16854851 used and 51816753
  free space, and more than 30 partitions of irrelevant sizes.
- if you try and change a partition size, after you select the drive,
  first it doens't display the correct drive name and model in the
  box which you select the partition in, but then, whatever you do,
  the system freezes and all you can do is restart your system.

So, yes, you can split an IDE drive in so many partitions you want,
and yes, it will work fine for as long as you don't try to change
anything regarding the partitions. But otherwise... :-/

Regards,

J.-Luc

Hi,

A first test from Jean-Luc C. (merci!!)
On a Falcon CT60 with 256 colors:

```
MACHINE=FalCT60 96 MHz / 25 MHz MiNT;
VDI=NVDI 5.3;
SPEEDO=Yes;
SCREEN=1024*768 8bits (8EC:0);
```

With the previous LDG:

```
OPENGL_SCREEN_PLEIN=221.060; (img/min)
OPENGL_SCREEN_FILAIRE=169.014; (img/min)
OPENGL_SCREEN_POINT=246.120; (img/min)

Pseudo OPENGL perf : 3.251 (video dependant)
```

With the new one:

```
OPENGL_SCREEN_PLEIN=371.463; (img/min) so + 68%
OPENGL_SCREEN_FILAIRE=244.508; (img/min) here + 44%
OPENGL_SCREEN_POINT=450.176; (img/min)    and there + 83%

Pseudo OPENGL perf : 5.133 (video dependant)
```

The results without screen don't change in OpenGL (a 3% variation, not more).

So I'm happy!
This routine given by Douglas Little for M_Player some years ago is really precious in 8 bit planes.

The routine in 4 bitplanes (16 colors) should be accelerated too, and maybe in true color some little improvment I hope.
Someone to test?

Guillaume.

From your description this sounds like a problem with hddrutil, and not
the driver itself. You should report this to Uwe Seimet.

    It's a dynamic library that provides routines ton convert any source
image into any destination image using an temporary 24 bits buffer.
    For example, you can have an image 1024*768 16 colors, interlaced bit
planes (the Atari encoding)
    You can display it into a 320x480 TC on a Falcon with that library
calling:
    1) 16 colors to 24 bits
    2) resize 24 bits to 320*480
    3) 24 bits to 16 bits falcon
    4) then display.

    Any other combination is possible.

    This library is used by Kronos (Atari Bench), by Eureka (Maths program)
and, in the future, in a clean VDI version of M_Player.

    Guillaume.

Hello
```

I just add, screen.ldg is most of time use to display 24 bits RVB picture to any video dependant format (from 1plane to 32 planes, at my known all video formats used in Atari world are support and even more). This is too a screen video format detection before I know the Eddi cookie exist!

It is used in MyAES and some other of my own softwares. As Guillaume said it's too possible transform from any dependant format to 24 bit a picture.

Notice that from 24bits to 8bits screen.ldg use the user palette of the VDI, and use all the 256 colors in it, I use it to display Cicon in MyAES because I transform Cicon from 16 colors to 24 bits truecolor to finally display it in 8 bits with no lost.

Screen should be able transform picture from independant format to dependant too but I'm not sure I have correct it, because I find it was buggy in MyAES and probably I not correct it after (I have to look for)

Olivier

I forget to said screen.ldg is able to display texture and picture
with the VDI

Olivier

Actually, my preference is for Jinnee.  The reason I was asking is
because, like the other products from ASH, Jinnee is no longer being
supported/updated, therefore I'm a bit concerned as to it's future
viability.

FOR SALE 2 STACYS
------------------------
```

I have 2 Stacys here.
One 4 meg unit with 20meg hard drive, works fine.
Loaded with software.

The 2nd one works, a 2meg unit, but needs a hard drive.
I have the second one apart and was going to replace the hard drive but haven't gotten around to it. It also needs the TrackBall replaced. Just the ball, the trackball unit works fine for it.

I have both working powersupply units that go with them

I am putting both up for sale right here, right now.
One can easily repair the 2nd Stacy, buy just added a hard drive and a track ball. The trackball got lost after taking it apart, but I may be able to find it. All other parts for the 2nd Unit are included, just need to be put back together. This unit worked when it was together except for the hard drive which is bad.

Or you can use the 2nd unit for parts, but both need to go.

If you needs pics, let me know and I'll grab my camera and take some snaps. Both are in good clean condition.

In the past I have searched for this program.
And have been told that it does not exist.
However, I have read references of people that have
used it.

I have Falcon with Expose', and to my knowledge,
ChromaStudio supported the Expose board.

So it would be of most interest to me, if I can obtain
this software.

I will pay reasonable amount, if need be.

Anyone know anthing about it?

1. Complete working 4meg Stacy with 20 meg Hard Drive.
Loaded up with Software, including working PowerSupply.

2. Second Atari Stacy with 2 megs and (bad) 20meg Hard Drive.
    This Stacy is currently apart ready for a replacement Hard Drive.
And for upgrading if you want.
You will need a replacement TrackBall, if I can't locate it.
Normally around $5-$10 last time I checked with Best Electronics.
Includes working PowerSupply. And all parts and etc to put back
together or use as a parts board. The Hard Drive Controller looks to
be the same one used in the MSTE or is very similar.
*Can be easily put back into a nice working STacy.

Both are carefully boxed and stored.

Would like to sell both STacys to one person.
But may split them up, If both sell.

Both have TOS 1.4 Socketed (2 chips).

Rare Machines and both are in very clean condition.
No Screen Scratches. And outer Case on both are in
nice condition. No cracks.

Pictures will be provided upon request.
For more info and to make a offer contact me at:
phantomm@suddenlink.net Put STacy in Subject or just reply to this post.
I'll be taken offers on these for a short time, so if seriously interested
do let me
know. Will Ship Overseas if you pay Shipping.
I will accept, Cashiers Check, Money Order and other if from OverSeas.

It's no problem to wrote a TSR which add some function, but I think it is impossible to add all.

I don't know if that helps you and other programmer.

I don't think the installer/configuration software is free. Also, there
are some ethernet-drivers (ISA and PCI NE2000) on this disk that are not
free.

>since MultiTOS in 1992, so I don't know how well it performs.

It doesn't.

Mint (and XaAES) utterly stopped working on 68000 quite some time ago. There was then made a once-only 'special' release of 68000- compatible mint kernel and XaAES that worked on 68000 again, and the release was accompanied with commentaries saying that some bugs had to be fixed in order to make the software work on 68000 but that the future support for the said CPU will be dropped and the 'special' reelase will not be developed further.

The implication, as I read between the linew, was that there were bugs that manifested only on 68000 and, by dropping the support for that processor, there was no need anymore to fix them.

regards;

Hey, thanks to you two for the info.  I feel what your saying about
the nostalgia value of firing up the old PC emulator and running Lotus
1 2 3.  Thanks for the link to the system disks.  Fortunately, I have
some copies that came with the setup.  I tested everything out and she
works pretty slick.  Unfortunately, I don't have the room to keep it
at this time.  I decided to throw it up on the Bay.  I've been a
Commodore guy for 20+ years, but I was pretty excited to mess around
with this ST for a bit.  Hopefully it will go to a good home (you
Atari guys are as fanatical as us Commodore guys, especially when it
comes to rare/oddball hardware.  You can check it out on ePay if you'd
like.  The item number is 140236618398.  Once again, thanks to those
that provided info.  deebee...

> Where can I find Dev-Pac DSP for the Falcon with manual?

I found mine on Ebay. However... apparently this package was crap (at
least that's what most DSP coders say).

There are free alternatives around, which are supposed to be much

better:
http://dhs.nu/files_code.php

The DevPac DSP manual doesn't really offer much, except a couple of
examples perhaps.

As I remember Chroma Studio later become Apex Media.

I should have copy of Chroma Studio at home...

Derryck and I were messing arround with it at the Cheshunt Computer
Club meet. Never thought anything more of it until Derryck asked.
Gave it a quick wizz to refresh myself before replying. Never thought

of it as a bug. My sincere apologies.

> Though here, the move will not be a "rename" (if same partition and TOS

OK.

I'll look out for the next version.

I dug out a ST 520 that I did not know I had the other week and saw that it was modified. The give away was a toggle switch on the left side of the system. I was thinking that it maybe had a TOS Selector in it so I opened it up and saw that it had a RAM Board, some kind of CPU plug in to the RAM board and wires running from each TOS chip to the toggle switch. I have no idea what the mods are except obviously the RAM Board. I can get the unit fired up and working with the toggle switch one way but pushed the other way I get a couple of BOMBS. I guess the switch is for Standard and Modified Modes. When it boots it comes up with 512K RAM and TOS 1.4 Rainbow TOS.

Here are some pictures of the system.
http://fmhcentral.freeservers.com/FMH_Central/Pics.html

Does anybody know besides the extra RAM what the CPU socket and wires to the TOS chips are for?

Thanks

I hate to admit it, but Le Coat may have a point.
Personally, I'm using a unix-ish setup, which means RPM:s are the
prefered way of doing things. It's great and easy to use. In a minimal
setup, i.e. without a "real" unix setup, I think a simple .ZIP would
be better. On the other hand, it's not like we release new kernels
every other day, which means this isn't really a big issue.

Personally I've had no issues with recent kernels, neither on my CT60
or my Hades. What kind of problems are we talking about?

That's a pity we can't find Julian F. Reschke. Spin 0.34 is a very
good CDROM driver I'm using on the Hades 60, very versatile.

We can find Spin in various ftp servers anyway.

Many thanks for your help.

Regards,

>

Well, you didn't ask me, but anytime you deal with virtual memory the computer has to both send data from memory to hard drive and retrieve data from hard drive to memory. However, the Falcon can only manage about 2 MB/s in a perfect world, and real world numbers are often about a tenth of that. Since CD quality audio runs about 150 KB/s, a Falcon will be hard pressed to record it via Outside, although it might barely work. Video at nearly any decent resolution is out of the question.

On the other hand, if you intend to use Outside to convert file formats, you should succeed, although the overhead will make your translations some 2 - 3 times longer.

Galen

Hi Fran=E7ois,

I hadn't thought of using an EeePC as an Atari. How practical is it?

Galen

Hi, I personally have installed Aranym on an EeePC (512Mb RAM, 4Go Hd) under WinXP.
I work in a window 640x480xTC. Good reactions of the system.

But someone has installed Aranym under Linux and it looks like its really more powerful (Tests made with Kronos from Olivier Landemarre).

So if you really need power with your atari applications, I recommend using Linux.

I had to install WinXP because I wanted to re-use some windows applications I have (most in mathmatics and programmation).

Have a look at the Kronos Page to view the results:

http://kronos.lutece.net/

Guillaume.

Reading the motherboard perfs result page (cleaned short version)

(a) PlayStation 3 Cell 3.2GHz ARAnyM 0.9.5 (no JIT)	259
(b) Dual-G4 1.25GHz ARAnyM 0.9.5 Mac OS X (no JIT)	304
(c) Hades 60 freeMiNT 1.15.12 + N.AES 2.0	670
(d) CT63 100MHz 16MHz bus	1194
(e) Coldfire Evaluation Board V4e 200MHz	1375
(f) EeePC Celeron 630MHz - WinXP - ARAnyM 0.9.6 JIT	1845
(g) EeePC 701 Celeron 630MHz Debian ARAnyM 0.9.6 JIT	2523
(h) EeePC Celeron 900MHz - WinXP - ARAnyM 0.9.6 JIT	2897
(i) MacBook Pro 2.4GHz ARAnyM 0.9.6 Mac OS X JIT	10735

Comments

(a) and (b) will there be a JIT for ARAnyM / PPC one day ?
(c) and (d) we are not speaking of the same display perfs !
(e) partially or fully ATARI compatible ?
(f) and (g) GNU / Linux is much better than WinXP ?
(h) no GNU / Linux comparison ? you must use EeePC at 900MHz !
(i) impressive and expensive ! the most powerful hardware / Linux

These result figures are cruels, but that's objective information.

ATARIstically yours =3D)

```

>
> Comments
>
> (a) and (b) will there be a JIT for ARAnyM / PPC one day ?
Perhaps yes, but you forget put an other interesting result
Athlon 2600+ Linux Aranym 0.9.5 (No JIT + MMU)   485
or better
MacBook 2.2 2.2GHz OSX Aranym 0.9.6 (No JIT) 734
that is far better than under Playstation or EeePC without JIT

> (c) and (d) we are not speaking of the same display perfs !

Yes this why there is 2 other tables for this look in web site.

> (e) partially or fully ATARI compatible ?

I not known any computer fully compatible with ATARI computer, Hades was not, Milan too like Aranym when use fVDI
but kronos work without any change on it. And this is the faster computer for the VDI! (I have to put results)

> (f) and (g) GNU / Linux is much better than WinXP ?

Linux looks really better than WinXP for run Aranym, this 2 systems can't be compare. Notice probably one was compil (linux version) for EeePC processor while WinXP Aranym version was generic version (for 386!) perhaps the problem is here for a part.

> (h) no GNU / Linux comparison ? you must use EeePC at 900MHz !

Why???? There is a test under EeePC at 630MHz with Linux and WinXP thats enough

> (i) impressive and expensive ! the most powerful hardware / Linux

Yes

>
> These result figures are cruels, but that's objective information.

Not cruels, in fact I use today Aranym without JIT and with MMU (I could use JIT but I have no really interest to go faster), this is not very very fast but it's quite enough to run Atari applications in good conditions, thanks to video speed under fVDI, and probably this is the most important. In my opinion Playstation 3 or EeePC are enough for run Aranym. Have fun.

Oups I have wrong here Tiny_gl.ldg and fpu.ldg was compil for V4e in
this case, V4e is not compatible with 68881 or even 68060 FPU
as for 68060 computer test we use the best lib for test.

I've ran into a weird problem with a Mega ST. Maybe someone who still reads this group may have seen something similar or knows more about the mega chips.

Upon boot up the internal drive will not read any disk (even a blank format).
The desktop will come up on screen and I can change resolutions.
However if I attach a 2nd Disk Drive, the Mega ST seems to try to format the drive(disk).

I can try to access the internal drive from the desktop, when doing so, the drive sounds like there is no disk in the drive to read.

I though that the Drive chip may be bad, but I know that other chips in the Mega also have something to do with Drive signals. I think the Sound Chip and maybe the Video Shifter relate drive signals, but not sure what part each control?

And does the keyboard have anything to do with the drives?

The Mega is a version 5.0xxx motherboard. with TOS 1.4.
Stock unit with 4megs. Used very little.

Found and bought an Atari ST (1024 FM) tonight for $3! Figured I should grab it up, years ago I bought a 520 FM and never was able to do much with it, considering its lack of memory and single-sided floppy drive.

This one is in good cosmetic shape, apart from the 'Backspace' key steam broken (nothing some crazy glue won't fix) and coming with a generic PC serial mouse with an AM/AT switch on bottom. Still, I'm now wondering if it's dead or alive...

Plugged into the RF connector to my TV set but all I get is a black screen. If I tap on the keyboard, I get a "beep" feedback sound through the TV's speakers if that means anything. I can hear the floppy drive trying to seek, looking for a disk for about a minute, but when it gives up, GEM does *not* load up. Shouldn't be in ROM? The power LED for the floppy stays lit up orange, it never goes out. Shouldn't I see some image on screen?

I tried an old Windows-based program called WDFCopy v0.09 to create a bootable disk, but after inserting it in the ST, it just gives up after a few brief seconds (not certain it

created a proper disk though, it's been years since I last
tried tinkering with an Atari ST).

Anyhow, I used the Apple IIGS back in the 80's, and
tinkered with the Amiga on and off in the 90's but never
had a chance to play with the Atari ST. Any chance of
getting this one working, or am I out of luck, again? :)

Mitchell Spector

Its not serial, its an Amiga/Atari mouse.
>

It is.

> The power LED for the floppy stays lit up orange, it never goes out.

This can occur if there is no disk in the drive and the desktop hasn't booted.

Shouldn't I see some image on screen?

Yup, a green desktop.
>
> I tried an old Windows-based program called WDFCopy v0.09 to create a bootable disk, but after inserting it in the ST, it just gives up after a few brief seconds (not certain it created a proper disk though, it's been years since I last tried tinkering with an Atari ST).

Just use a blank formatted DD disk. The Atari ST doesn't need a boot disk.
>
> Anyhow, I used the Apple IIGS back in the 80's, and tinkered with the Amiga on and off in the 90's but never had a chance to play with the Atari ST. Any chance of getting this one working, or am I out of luck, again? :)

I would build/buy a video cable to suit composite output. It is better than mucking around trying to tune the TV to as a monitor.

Something like this;

http://tinyurl.com/5fftyf

To make a composite cable you just use pins 1, 2 and 13. I will draw a schematic for you when I get a minute. Bugger it, here you go;

http://members.optusnet.com.au/~startreks/stcct.html

Good.

You may use an ATARI spreadsheet for charts like Texel, GemGraph,
3D-Calc, LDW Power, VIP, ATARI Works etc.

>> (a) PlayStation 3 Cell 3.2GHz ARAnyM 0.9.5 (no JIT)   259
>> (b) Dual-G4 1.25GHz ARAnyM 0.9.5 Mac OS X (no JIT)   304
>> (c) Hades60 60MHz freeMiNT 1.15.12 + N.AES 2.0   670

> or better
> MacBook 2.2 2.2GHz OSX Aranym 0.9.6 (No JIT) 734

> that is far better than under Playstation or EeePC without JIT

Of course yes. But the principle of a benchmark is not to compare
perfs of systems in the worst case. One tries to take the best we
can obtain from a computing configuration. Otherwise you don't mix
results, and you speak about "best case", "worst case" or even in
the "mean case" etc. You should compare what can be compared.

>> (c) and (d) we are not speaking of the same display perfs !
>=20
> Yes this why there is 2 other tables for this look in web site.

With ET4000 1Mb V-RAM graphic card Hades60 displays 800x608 64k colors.

>> (e) partially or fully ATARI compatible ?
>=20
> I not known any computer fully compatible with ATARI computer, Hades
> was not, Milan too like Aranym when use fVDI

68k family is *binary* compatible, Coldfire is not, not 68k compatible.

> but kronos work without any change on it. And this is the faster
> computer for the VDI! (I have to put results)

What kind of display system for the Coldfire Evaluation Board ?

>> (f) and (g) GNU / Linux is much better than WinXP ?
>=20
> Linux looks really better than WinXP for run Aranym, this 2 systems
> can't be compare. Notice probably one was compil (linux version) for
> EeePC processor while WinXP Aranym version was generic version (for
> 386!) perhaps the problem is here for a part.

Figures are there. We speak about what is published, not as it might be.

>> (h) no GNU / Linux comparison ? you must use EeePC at 900MHz !
>=20
> Why???? There is a test under EeePC at 630MHz with Linux and WinXP
> thats enough

We can't compare with EeePC at 900MHz / Linux. Maybe GNU / Linux
can't control the frequency of the CPU at 900MHz, eventually ?

>> (i) impressive and expensive ! the most powerful hardware / Linux
>=20
> Yes

We speak about an Intel Mac (Mac Book Pro) with a dual-boot x86-Linux
Ubuntu & Mac OS X Leopard, don't we ?

>> These result figures are cruels, but that's objective information.
>=20
> Not cruels, in fact I use today Aranym without JIT and with MMU (I

> most important. In my opinion Playstation 3 or EeePC are enough for
> run Aranym. Have fun.

Well, as you can see PlayStation 3 and Power Mac G4 are at the tail
of the performance list. I wouldn't mind if it was a little quicker ;-)

I do agree, it's great pleasure and gives great satisfaction indeed.

ATARIstically yours =3D)

Hey Barry! I know you've got a lot of other ST stuff lying around - how
about switching out the floppy drive with a known working one? At least
that way, you could rule out the drive, before you started chip-chasing.

The Mega models aren't too hard to take apart.

Hope this helps.

Bonsoir

Fixed the crash at launch under MiNT environment with Memory Protection, also for the following applications and utilitaries:

Cr�sus
Troll (*)
Joe et ses modules
Iphig�nie
Meg (*)
my utilz for fVDI (Configurator, Commander, Snap, RageCalm)

(*) like the Litchi, cannot test with both MiNT Memory Protection AND MiNTNet+gluestik.

Conclusion: near all of my programs and games have been fixed. Please refer to the date release wich begins at May 2008. If you encounter problems while running the programs, under MiNT + Memory Protection, please report to me.

Some programs (Blaise, Xport2 and GFAMenu) were not fixed. Considered as dead.

Voil�

Pierre

Already, switched out the internal drive, with a known working mech. And
got the same results.
Also tried an original Atari external disk drive and a GoldenImage which all
work fine on
my 1040STe. I replaced the powersupply and it's purring like a panther. I
mean kitten.

I've had the Mega apart, as I was going to do a few upgrades before this
problem came up.

Reason I ask about the keyboard, is I plugged in a TT keyboard before this
problem came up.
Unless all TT keyboards are the same, the one I used seems to be a non-US
version.
Due to what appears to be a Sign for the UK Pound on one of the number Keys.

I then tried a original Mega keyboard but get the same. I think it's a chip
problem.
Btw the mega acts, you'd think it has its NVRAM messed up. But the mega
doesn't
have NVRAM.

If a bad keyboard can mess up the drives then it's possible that I have 2
bad keyboards, I have another
Mega keyboard that I'm getting ready to try just to make sure. Then going
after the Yamaha chip.
Most of the chips in this mega are socketed, maybe ones loose.

Ahh, that's what the AM/AT stands for (AMiga/ATari).
At the very least it looked like a modified PC serial mouse,
underneath the switch I can see "MS" and "PC" embedded

in the plastic. Interesting, I have a similar Amiga mouse with
the same switch and never realized it was Atari compatible.

And if memory serves right, it should just come up on its
own after several seconds if there is no boot device found.
There's no special key press to boot GEM from firmware, right?

If I don't have one available, will it still boot into GEM?
(seems to me my 520 ST-FM did if I left it on long enough)

Thanks, that should be helpful, but that's assuming the
RF modulator is faulty (I've seen that before on other
computers, but usually you don't get picture OR sound--in
this case I can hear the "beeps" pressing keys which
tells me it is tuned in correctly).

>To make a composite cable you just use pins 1, 2 and 13. I will draw a
>schematic for you when I get a minute. Bugger it, here you go;

>
>http://members.optusnet.com.au/~startreks/stcct.html

Is pin #2 composite-video and pin #13 ground?
I have RGB monitors that work at NTSC/15.75 kHz
and could wire a cable, but I'm not likely to find that
non-standard DIN-13 connector.

Incidentally, I opened up the Atari ST today to have
a look inside. The motherboard is labeled "C070789-001
Revision D/Action D2". Most of the chips are soldered
in, but I tried pressing down on the socketed ones. Also
unplugged the keyboard and floppy--still just a black
screen and the "beep" (or "click") when I reconnect
the keyboard and tap keys. Actually it continuously beeps
if you have the keyboard disconnected.

Either the RF modulator is faulty or something else is
blown. Kind of reminds me of my C64's that won't boot
up and just show a black screen (in those cases, I think
they have bad RAM). Ah well, if I had a bootable Atari
disk I could at least see if it's a video problem or not.
I may just give it away or toss it eventually...

Yes it should, but it can take a while. Initially you should get a white
screen.
>

It'd be pretty rare on an Atari.

Its been a while since I've seen one.

The constant click is normal. There is a fix iirc using a single
resistor. I used to do that when I was fixing ST's, wasn't so annoying;-)

>
>   Either the RF modulator is faulty or something else is
> blown.

Possibly the video shifter? Tho I'll ask the obvious and ask if you have
tried tuning it?

Kind of reminds me of my C64's that won't boot
> up and just show a black screen (in those cases, I think

> they have bad RAM). Ah well, if I had a bootable Atari
> disk I could at least see if it's a video problem or not.
> I may just give it away or toss it eventually...

All disks are bootable as far as the Atari is concerned. just drop a
blank one in. Another problem is that the composite video is derived
from the RF modulator, so if it is faulty then composite won't work either.

Mark

?????
Why? for example Athlon 2600+ Linux Aranym 0.9.5 (No JIT + MMU)   485
is comparable with Playstation 3 values, in this 2 case there is no
JIT, that is the only differences of this 2 computers.

>
> >> (c) and (d) we are not speaking of the same display perfs !
>
> > Yes this why there is 2 other tables for this look in web site.
>
> With ET4000 1Mb V-RAM graphic card Hades60 displays 800x608 64k colors.

And??? Notice the only difference with 32 bit and 16 bit for the
second table is only the transform from 24 bit to this display and in
fact transform from 24 to 16 bits is a little bit faster than
transform 24 to 32 bits.

>

Like Playstation nor PC nor Mac Computer is not!
Now big diffrence beetween a specific hardware computer is it is very
easy to have native software under it that is not easy at all under
Aranym. I wan't compile for V4e Tiny_gl.ldg I just change compil
target and thats all as I do for 68060 in past, it run, I'm able to do
this under Aranym but I should add code in Aranym itself and create a

new ldg that call native one and have a translation of address in Atari world and host world, near 3 weeks of work to do this and probably Aranym team will not agree to add all sort of source code in there software!

>
> > but kronos work without any change on it. And this is the faster
> > computer for the VDI! (I have to put results)
>
> What kind of display system for the Coldfire Evaluation Board ?

This is an Radeon 7000 (128bit bus) on PCI with a lot of native primitive call, so it's really fast, this sort of graphic card could be put on your hades, result will be better than on the coldfire card I think because fVDI kernel was not compil natively and memory access on this evaluation board is slow in fact, this is not a real computer but interesting for us.

>

Oh no, you alway's transform results, even if it was not better on Linux than for this case(I don't think so but I'm going to ask to David to have this result for you), can you explain me why most user will not use Aranym JIT when they can?!!!!! And result is quite different:
EeePC Celeron 630MHz - WinXP - Aranym 0.9.6 (JIT) 1845
or
EeePC 701 Celeron 630MHz - Linux Debian - Aranym 0.9.6 (JIT)
2523
or
EeePC Celeron 900MHz - WinXP - Aranym 0.9.6 (JIT) 2897

Good reason? Compatibility is very good even with JIT (never be able to find a software running without JIT that not run under JIT this is possible probably but wich one?), speed is far better. I know only one reason not use JIT, it's for developper's only that wan't fix bugs using memory protection (like using NULL address under JIT not crash). Do you use your Aranym with MMU and full system memory protection? Me yes, but you not. For user there is no reason and if speed for you is the most important, so EeePC is better than Playstation 3 but I think we don't buy playstation or EeePC for Aranym only!

>

> >> (h) no GNU / Linux comparison ? you must use EeePC at 900MHz !

> of the performance list. I wouldn't mind if it was a little quicker ;-)

No
EeePC Celeron 630MHz - WinXP - Aranym 0.9.6 (JIT)   1845
or
EeePC 701 Celeron 630MHz - Linux Debian - Aranym 0.9.6 (JIT)
2523
or
EeePC Celeron 900MHz - WinXP - Aranym 0.9.6 (JIT)   2897
That is the true, and we wait for JIT PPC in Aranym that possible
change this reality, and I will be very happy to add this results on
my web page, if you have this send me!

Now I am going to be a bit malicious, have you try to report results
to processor frequency?

At the same speed frequency EeePC under WinXP, Aranym for 386! should
have a value of 477 And Playstation 3 have only 259. And I wait for
results with Linux compil for EeePC!
>
> I do agree, it's great pleasure and gives great satisfaction indeed.

Yes and that is most important, and EeePC user have the same
satisfaction, strange isn't it!

And now look at this:
http://leeenux.blogspot.com/2008/02/eeepc-et-mac-os-x.html

Good video! I don't know if you can do this on Playstation 3 and if your Apple computer can boot as fast as this. For an obsolete computer this not so bad!

Could be, sometimes just removing and resocket-ing them is enough.

Good luck.

Floppies are now little obsolete, maybe even by oldies. Anyway, I designed, built and tested today something new (at least I didn't see such solution anywhere): HD floppy adapter with hardware steprate fix. For Atari ST machines.

So, no need for any steprate setting program or patch. It works with all TOS versions well.

Of course, DD floppies work as without this adapter.

I plan to produce little add-on board, which can be placed on top of FDC chip. Of course, if there is still people interested for something like this...

I went back over the Mega ST PCB, and it has a problem with a chip or chips
that control
the reading/writing of a disk in the drive. I disconnected the power to the
internal drive and rebooted.
The Desktop comes up instantly without any drive Icons. I went a step futher
and added an
external disk drive (known to work) while leaving the power off the internal
drive.
And rebooted. Again as with the internal drive connected, it takes 1-2
minutes for the desktop

to come up. I can select items from the desktop, switch resolutions, add devices and etc.
But if I try to read a directory from drive B, then I get the ole error message that the disk maybe
damaged. I get the same results from the stock internal disk drive.

So, I'm positive that the internal drive is good. Just a matter of finding and replacing the correct
damaged chip. I think I have what I need here to track it down, just thought I'd ask in here to see
if anyone knows for sure which chip in the mega controls the reading/writing of a disk in the internal/
external drives?

Guess I'll have to dive into a few of my tech manuals for that.

I'd like to fix this Mega as it's a nice one, used very little and has the stock 4megs.
If someone reading this happens to have a Mega ST that they no longer want then I'd be
interested in it for parts. I don't have to have the keyboard or the case or the internal drive for that
matter, a working motherboard will do fine, version 5.0 if possible.

Send me a e-mail with details on the Mega ST that you have to get rid of or sale to me

Hello,

I have added the HD controler and a Vortex ATonce into my Mega STE.
Since that, I can't get my NOVA graphic card to work!

I have tested the ET4000 board into a PC, it works fine.
Is there something I have "moved", a jumper or else that can influence the VME?

I have made the tests again without the Vortex, nothing changes, the NOVA still is down.

Has someone experienced a conflict between those pieces of hardware?

Help!

Guillaume.

Hi Guillaume,

I have a Vortex ATonce in my Mega STE, the 386SX version with the optional Fast Ram. I'd like to find/get the 80387SX Co-Processor for it. Anyone have one?

I also have a NOVA Graphics Card (MSTE/TT) version, but have not installed it into my MegaSTE yet.

Thought that the NOVA was a different board from the ET4000?

I have a ET4000 board. But my NOVA is in a box case and without looking
I think it is a MACH board. Maybe both are one in the same?

Will take a look and let ya know what board is attached to my Nova VME MSTE adapter.

My MSTE is a factory 4meg, TOS 2.06, with internal hard drive. Also has the High Density
internal disk drive.
I've had no problems with it and the ATonce 386SX.

I was going to install the NOVA, but want to put a Ethernet VME board in it.
I'll try to order one, unless someone reading this has a working one for sale/trade.

My MegaST went bad which has put me off from upgrading the MSTE.
Currently, I am going through all my Ataris, and upgrading, modifying and cleaning
them.

As for your problem, Check all cables from your Graphics board to the VME for
damage or loose connection.
I don't recall if the Nova has a driver that must be installed without checking my
manual. If so, I'd re-install it and boot up with only the necessary AUTO and ACC
programs in case you have a software conflict.

Have you used NVDI in the past with your ET4000?

Also, what version is the ATonce, is it a 286 or 386?
Do you have the manual and software for it, if so what version is
the software you are using?

I'll check my manual and software version and get back to you.

You said, something about installing a HD Controller?
Did your MSTE not have one already, or do you mean something like
a Link 97?

phantomm@bellsouth.net

    There was no internal HD support (a Mega STE Open).

    Since yesterday, more problems came: now it can't see any of my ACSI
```

units! Booh... Is it dying?

Hello,

You could have some loose chips and possibly the memory chips. I would take off the cover and just press down on all of the chips and then try it again. I had one do the same thing and this worked for me.

Actually there are different boards, According to my Nova Manual.
Each has different amounts of memory and color/resolution capability.

>
>   The 386, I have the software, but not the manual.
>   I you have it, it could help!

Yes, I have the manual for the ATonce and the Nova
with the original software disks.

The manual would help with using the ATonce, but from what
you have written, it sounds like there is something else wrong.
When I get the time, I'll look thru my manual and see if I find
anything that can help.

>

>> a Link 97?
>
>   There was no internal HD support (a Mega STE Open).

I still do not fully understand what you mean here.
The Mega STE did not have the internal hard drive option and you
added a internal hard drive controller?
Or did you add a external hard drive controller, such as a ICD Link,
Link 97, or etc?

Since your problems started when you added the HD Controller and Vortex,
I would think that it has something to do with the HD Controller.

If I knew which one you added, it would help me understand your problem.
The MSTE internal hard drive controller can be alittle unstable if not
connected
firm and with good ribbon cables.
Also, the MSTE does have switches that effect the internal hard drive
controller

board if I remember correctly, there is a DIP that has to be in the right selection
to tell the Computer that the internal controller is connected.

I don't know if your MSTE came from the factory without the internal hard drive
connector or not? Some were made without it.
If you's did not come with one, and you added one, then you may need to set a
selector switch.
I have the info here somewhere, will look it up asap.
But need to know what type of HD controller you connected and are trying to use?
A internal unit connected to the motherboard?
Or one connected to the Hard Drive Port on the back of the Mega STE?

>
>   Since yesterday, more problems came: now it can't see any of my ACSI
> units! Booh... Is it dying?

Not good, I'll look up what info I have and see if I can find something to help.

That's it!

> Since your problems started when you added the HD Controller and Vortex,
> I would think that it has something to do with the HD Controller.

I tried without the HD, without the Vortex, and now it looks like something is broken... The NOVA don't seem to work.

> Also, the MSTE does have switches that effect the internal hard drive
> controller
> board if I remember correctly, there is a DIP that has to be in the right
> selection
> to tell the Computer that the internal controller is connected.

What is strange is that:
- before any change, the NOVA was Ok, then (with the same disk running the same programs) it didn't work
- the internal HD used to work, but then no ACSI/SCSI disk were detected.

It seems to "die" piece by piece.

> If you's did not come with one, and you added one, then you may need to
> set a
> selector switch.

I'd like to know wich one to save something in this machine... I have searched the internet but can't find the technical documentation for a Mega STE.

This one yes, internal unit from Atari.

Thanks for your help,

Guillaume.

While working with different files, i have discovered that the unix / linux command line tool /file/ is missing in the EasyMint distribution. /file/ determines a format of a file and give some user readable informations about it.

Get it at : http://ragnars-world.homelinux.org/atari/

    Nope! I did notice a small metal cage with a liftable top cover. Is there
a potentiometer under here that might help? So I just twist it a bit and see
if a picture appears, or is there more to it than that?

>All disks are bootable as far as the Atari is concerned. just drop a

    Well RF video would be passable enough to get started with, at least
to test things out. I tried pressing down on the socketed chips like
someone here mentioned (only two or three in this case) but that didn't
seem to do anything. Could the video shifter be the problem, or is bad
RAM more likely?

Easier than that, I mean tuning the TV;-)

```

Bad RAM in my experience is not that likely. I've only ever had one Atari with bad ram and that was a 130XE. Shifter would be my first thought if the audio was working. Then again there is plenty between the shifter and the modulator than could be at issue. The vast majority of faults I see with ele\ctrical gear is capacitors. But I'd try tuning the TV and/or an AV lead first. It'd be better to eliminate the obvious.

Hello

I have problem to update my Eiffel interface, I downloaded last version 1.10 Eiffel control panel. During the boot of my falcon with CT63 I have information on the screen
Eiffel 1.0.9 10/2004 and in the next line:
Press fire during power-on for old firmware.
What does it mean.

From this archive eiffel.lzh I loaded eiffel.hex and press program flash, when finished i closed this control panel and reboot my falcon, but no change during the run of falcon I see the same information like previously.

The second problem is in the joystick I observed that in few games (for example Goods) the fire is not active.

Does anybody know, what is a problem.

best regards
Piotr Mietniowski

Hello Newsgroup,

i just got a bunch of pictures of an interesting 19" Atari modification. The unit housing the atari itself is 3 units high, the one with the screen is 6 units high. It was used for music recording, a cubase dongle is still plugged in. Does anyone know what this thing realy is and what it is worth and where i can find someone that realy will appreciate this thingie? :)

Thanks!

Regards

sebastian

Hey Greg! I've still got these listed on a random logoff screen on my BBS.

ape.penguinpowered.com

bbs.coldwinterknights.net

ainside.no-ip.org

stguild-bbs.dyndns.org

Hmm, after trying I couldn't get any of these to work. Has anyone else
tried lately? Thanks.

Surely, I'm not the last Atari ST based BBS out there? :)

nice one but beware, this version isn't 100% bug-free. that's the
reason why I use ripped .ttp ice packer (by MugUK I believe?). I'm not
sure what kind of bug it is but I think it was in some readme file :)

OK, now I understand what you are using, I am checking on a few things,
as this is abit weird for it to all start going bad on you.

I think I may know what it is, but don't want to say until I'm sure.
I'm checking out a few things on my MSTE.
BTW, what type of monitor were you using with the NOVA before

you added the Vortex? If VGA was it a multi-sync?
And did you get the Vortex to run and display on the screen before things
went bad?

So, one could not use Geneva and FreeMint together?

Installing Mint is something I will do in a future project, I've got too much
going on to really devote my full attention to it. And if I am going to install
it. I want to do it right, by understanding it all first. I've not taken a good
look at Mint in a couple of years.

As for the USB, I don't see why one could not develop a Cartridge based
USB adapter. This has already been done on the Atari 8-bit. I have one
of the USB Cartridges. Looks really cool, too bad no one is writing drivers
for it much.

The EtherNat/Mint thing does bug me though.
If one could just plug in the board into say a Cart or Printer port, install a disk
of drivers in a folder on drive C or run it from Drive A: I'm sure we would have
alot more people interested. There still seems to be a demand for Atari
machines.

Despite the lack of support for it in some areas.

At some point the sockets functionality was moved from a device into the kernel itself. Then the relevant GEMDOS-functions has been added. However, I don't think the XIF-interface (the interface between the network device driver and inet4.xdd) has been changed, as I've used the same driver before and after this change without any problems. Also, this particular driver (DE620-driver by Elmar Hilgart) worked on both MiNTnet and MagiXnet simply by changing the filename suffix from xif to mif.

> API as has been stated is the problem??? Was something added to this

> particular driver for MINT that makes it not work the same for MagicNET??

I have no idea. Is the source code available? If so, it should be possible
to fix it unless it depends heavily on some MiNT-only feature(s).

> As I stated basically the same thing that you have to create a work
> around to get your idea to work. There may not be a direct feature so
> to speak that can be accessed but there is always a way to get anything
> to work on any device if you think about it long enough.

Thinking is the easy part. The actual development might not be so easy ;-)
Believe me, it's quite frustrating to draw the benefits of new features in
XaAES and then have to implement the same feature from scratch to be able
to run the application under N.AES or MagiC. It would be so much easier if
everybody just switched to XaAES (or MyAES, which is very up-to-date as
well).

> Jo Evan I can certainly help you out testing your stuff so that it works
> under Magic. Would you like me to beta test your stuff and get back to

I have beta-testers, but the problem now is that I have a particular
program that won't even start under MagiC. So I need to debug it under
MagiC. I have MagiC on my Falcon/AB, but no space to set up this Falcon so
I can't use it...

I've used Geneva 7 under FreeMiNT, but that's almost 10 years ago. I have
no idea how it would perform with the current version.

> As for the USB, I don't see why one could not develop a Cartridge based

Isn't there already such a thing?? The Netus-Bee?

There is no good and clean way of expanding TOS this way. You'll be
relying on TSR's, cookies and whatever. It's much easier to do stuff like
this under MiNT. MiNT is also developed and is fully open source, which
makes it possible to expand/modify the OS itself if necessary.

Floating windows. Extensions to appl_control (which again doesn't exist at all under MagiC). Menu-widget in windows. Automatic handling of keyboard shortcuts in forms when using form_keybd.

Well, I don't know if you're refering to network interface drivers or
to the USB stuff. The latter has nothing to do with MagiCNet, while
the former suffers from compatibility issues which are difficult to
solve since MagiCNet is nolonger developed, and the source code seems
to be closed (which is odd, because afaik it's based on MiNTNet which
is GPL).

>

Hello,

OK, then I'm not that dumb that I seem... ;-)
Most of my problems went from my HD, others however still occur that
seem to be SCSI-dependant. :-(
I managed to backup my 20 GB disk to a tape, then formatted a new 10
GB one with one LNX partition (lnx doesn't work, BTW!), tied it to
the IDE as Master, the old being Slave, and transfered data.
Then installed EasyMiNT and got it running in less than 2 hours. :-)
3 problems, however, so I must have done something wrong :
1- Everytime I reboot, I must use XaAES' setup to change to 256c,
   VGA, PAL, etc. It seems the config isn't saved. :-/
2- Didn't find how to properly shut down the computer : only get a
   "quit" option under XaAES, that asks whether to kill the still
   running accessories and reboots. :-/

3- The EtherNAT's LEDs light-up, the screen displays something about
   100 Mbps full duplex, but then, when I try to ping my gateway,
   nothing happens. :-/
   I searched to and fro on the net, but all I found was related to
   serial port connecting, not LAN.
   A page somwhere, on a website, that I could have missed, and that
   could explain the correct settings ?

All this makes that I'm currently using MagiC! and my EtherNec again,
until I can understand what I did wrong. :-(

Regards,

J.-Luc

>> Why cant this be done with this driver for MINT to work on MagicNET??

Hello,

Maybe because MagiC-Net is a very outdated hack of MiNT-Net, which
used to be compatible enough until MiNT-Net developpers added new
important features (not to blame the MiNT-Net developpers, is it?)
that allowed the stack to keep accurate.

>> There has to be someway of getting MagicNET to work with this driver in

> MagiC has proper support for device drivers, although it looks to me that it offloads a lot more work to the driver (and the developer!) than the API used in MiNT. It also has support for loadable filesystems similar to MiNT's, but I don't know the details. They're not binary compatible though, that's for sure.

Well, since it's not binary compatible then we're kind of screwed anyway. But I wouldn't mind getting my hands on the specifications for that stuff so I could port my joystick drivers for it (well, provided I get access to MagiC as well).

> Indeed! Using new features AND be compatible with MagiC means adding lots of code to emulate the new features under MagiC. This means wasted time and efforts, which we really can't afford with the small number of developers left.

And - (no offence non-coders) - non-coders tend to claim it's just a matter of "try a little harder". This is usually not the case, because it means you can't rely on a particular design but need to do a "one size fits all"-solution (which is often no way near as good as the original design).

> I'd like to test my stuff under MagiC, but will wait until some sends me a free copy of MagiC-Milan ;-) I already have a legal copy of MagiC 6.1, but that one doesn't work on the Milan.

Me too! In such case I would consider supporting it. As things look now I won't.

Well, and there we have it. My impression is that most of the active
coders (far from all though) are using FreeMiNT. Asking them to fix it
for MagiCNet won't get you far. There should be a few MagiC hackers
around, and perhaps they could fix it? The driver sources are - thank
god - GPL.

And btw - "programming is nothing more than hacking a computer" - I'm
not sure I agree with that. In the end ofcourse it's down to 1:s and
0:s, but frankly, it's more than that.

Yes, just checked it out. Good to see the cartridge port can be used
for something new for a change.

Sounds like Mint has just about replaced TOS, maybe burn it into a Chip and
have Flash upgrades.

OK, thanks.
But that wasn't enough.
Finally, I succeeded getting it working copying some data from my
MagiC-Net config.
So, it seems that for ethernet, the dialog box at installation
isn't enough to get it working straight after reboot. :-/
Now, I'm going to do some testings and read the hyp files to try
and solve the two other problems I described earlier. ;-)

Regards,

J.-Luc

Dear ggn, obviously your knowledge about Atari is not much better than knowledge about PC, WIndows. We need only driver for USB Pen drives. Filesystem is not so relevant. There is FAT16 support in TOS. There is FAT32, Ext2 support in Mint. There is BigDOS for large FAT16 partitions. We need to target only low level sector access, as it goes by mass storage.

I like some people here. I like something what is said. And not like something. But you will ever be one who just dislike everything around me. Really, talking with you makes bad influence on me. You are so stupid and uninformed, that I really start to feel as guru of knowledge :-)

Ok that can be the problem. Shall I set the unit ID on both the HD controler and the HD itself?

> You might try making a backup of the Vortex software disk and deleting the
> .CFG file
> and then run Install.prg.

Yes, this is another idea.
I'll try it.

> Both actually. I have alot of video hardware and software for the Ataris.

Okay, that's great.
Few people reports using M_Player as a video builder.
Have you seen that I added the CRAM (8 bits and 15 bits) compression?

If you want to know more, have a look at:

http://pagesperso-orange.fr/gtello/mplayere.htm to download the last version

http://pagesperso-orange.fr/gtello/makvide.htm to see my own installation
and an example of video I made with my Ataris.

http://pagesperso-orange.fr/gtello/tt_e.htm to see the program I made to use
the Vidi ST12 on the TT + NOVA.

Guillaume.

> 1- Everytime I reboot, I must use XaAES' setup to change to 256c,
> VGA, PAL, etc. It seems the config isn't saved. :-/

you must edit c:/mint/1-16-x/xaaes/xaaes.cnf manually with an editor,
be aware "newline" character must be the unix one, QED does this
automatically. Inside the file you have info about how to set the

resolution value.

> 2- Didn't find how to properly shut down the computer : only get a
> "quit" option under XaAES, that asks whether to kill the still
> running accessories and reboots. :-/

you can open a shell/bash terminal with toswin and type "shutdown"
you can use a taskbar like ztask(is free and open source), it has an option to shutdown the system.
Taskbar i think looks for SDMASTER an enviroment variable that you can put in xaaes.cnf like this:

```
setenv SDMASTER u:\sbin\shutdown
```

> 3- The EtherNAT's LEDs light-up, the screen displays something about

> could explain the correct settings ?
>

you need to edit these two files u:/etc/sysconfig/config.if and u:/etc/sysconfig/defaultroute

and u:/etc/resolv.conf if you want to do some internet.

also with these files be aware about unix "newline" character

> All this makes that I'm currently using MagiC! and my EtherNec again,

So as the Easymint author thanks for an email after someone uses his
software, you can send the email and explain what happend with the
ethernat and he can improve a little bit more the installer supporting
this card.

The HD must always be set to SCSI ID 0 in order to work with the Mega STE SCSI adapter.

This is not correct, FreeMiNT doesn't care if the linebreaks are

Atari/DOS or unix.

This is correct. Also, if you're using Teradesk it can shut down for you.
There is also shutdown.app which is included with EasyMiNT.

> also with these files be aware about unix "newline" character

Yes, these files must have unix linebreaks.

My hard drive was a Seagate 46/47 meg SCSI, it had no visable jumpers on
it.
The MSTE Hard Drive utilities Software, saw it as Unit 1 with the Vortex
board
installed. Now I could format and partition the drive with the system
software,
however it would not install a working driver. It would not see the drive to
install
the driver even though it would format and partition the drive.
I used HD Driver version 6.00 which saw the partitions created with the MSTE
Hard drive utilitie software, and installed a bootable driver.
This is the only way I could get it working with this drive.
I didn't try setting the ID on the controler. But did try setting the drive
to Unit 0
with jumpers. When I had it as Unit 0, I could not do anything with the
drive at all.
When selecting it to repartition, I would get a message that the drive
doesn't exist or
nothing to partition. (something like that). So I removed all the jumpers on
the drive
which sets it to Unit 1. At least with my MSTE setup. It was the only way I
could
do anything with the drive.

I started to remove the Vortex and see what Unit the drive would be without
it.
But got it working right before it came to that.

What had happen was, I had somehow messed up the boot sector on the hard
drive
with the Vortex installed.
Normally the internal hard drive would be setup working, before the Vortex
is installed.

Looking in the MSTE manual, the internal hard drive is Unit 0, so it's abit
backward.
Unless I run into problems, I'll leave it like that.

I'll have to check these out, been abit busy latey.
Let me know how you get along with the Vortex, it's a nice
board.

I don't think MiNT is suitable for this. It would have to be modified
quite a bit to work from ROM, and even then I don't see any benefits at
all.

Aren't these related to the NVRAM? As for XaAES itself, "video=27"
in "xaaes.cnf" will boot in 256 colours.

> 2- Didn't find how to properly shut down the computer : only get a

Ctrl+Alt+H will halt the system. The Task Manager also has a Quit button
that will shut down. The accessories in question are buggy and do not
react to a shutdown message. XaAES has to kill them but asks you
politely before. This is explained in "xaaes.cnf".

> 3- The EtherNAT's LEDs light-up, the screen displays something about

Looks like a simple config issue. Check that you have your nameservers
set in "/etc/resolv.conf".

video = 59 dit it fine. ;-)
Things must be examined one at a time, then it becomes easier. :-)

I had skipped some parts. :-(
Mea culpa. :-(

That's what I found comparing my MagiC-Net config and MiNT-Net one.
I first only focused on the files into /etc/sysconfig/, but then it
became obvious some other important files were missing.
After examining the content of /etc/ into MagiC! folders, I found
```

that both hosts and resolv.conf were missing. :-(And, after filling
them with correct info, all went working. :-)
I sent Marc Anton an e-mail.

Regards,

J.-Luc

Not quite sure, as I haven't used these for atleast 10 years now. IIRC
they require a Falcon, but I could be wrong.

Hi,

A few years ago I inherited the game 'Xchess' in the original box.
Unfortunately there are a few badsectors on the disk.
So I was wondering: anyone out there who has got this game and wants to
send me a copy?
Thanks in advance.
Oh I can proof by the way that I own the original game by sending a scan
of the manual or so.

Hello all. I just scored a neat little 1040STf system today. I ended
up with the computer, 2 monitors (one Atari 1224 color and one 124
Monochrome), an SF 354 disk drive, and some software. The computer
has the Michron PC-Speed PC emulator hardware installed. I couldn't
find much info on this online. Any idea as to the rarity of this
emulator or what it may be worth? Thanks in advance, deebee...

There's been a version built with FPU support, instead of the DSP
support, as you can see at <http://aranym.org/scrshot/apex2.png> so
that it could run on TT030 as well. But I guess it was never released.

I personally bought and registered the Falcon030 version of APEX
Media, and would have been very pleased if it also run on Hades060 !

In any case you can have a look at the following FLI/C viewer

<http://www-ftp.lip6.fr/pub/atari/Falcon/Graphics/flictc47.lzh>

rather slow but very helpful, I tested myself.

I hope it can help.

Regards,

Hello,

I've been using MiNT for a few hours now, and so I think it's time
for reporting. I must admit that, having read many posts in which
MiNT users praised all the advantages of MiNT vs MagiC!, I always
thought all my problems would be solved when switching to MiNT.
It took me 4 years before I mad up my mind and, so far, I must say
I never saw my system crash so many times in so few time.
I own a CT60'ed Falcon running at 96 MHz, but the crashes occur at
72 MHz too, doing things so easy that typing under QED.
Last night, I counted more than 30 crashes in 1 hour. Some times
XaAES decided to hang, some other times it happened when opening
QED, or HighWire, Troll, Litchi, Arcview or even a drive.
Each time, no way to resume, had to reset.
I deleted every program or accessory that I read was known to make
the system unstable - as Bubble Gem, for instance - and the only
one that I know still being active is Xcontrol, which I have no
other to replace with.
I hate those crashes that happen with no reason, and that disappear
just as they came, without letting us find what happened. :-(
As I'm there, I've got some questions I'd like an answer to or, even
better, a link to explanations - I've been reading so many things in
so few time, that I *must* have missed something - :
1- despites the keytable.tbl that i built and put at the same place
   as MINT.CNF, my PC keyboard behaves like an original ST one. :-(
2- TTP's and TOS' don't launch anymore, despites XAAES.CNF containing
   the following lines :

```
   ------------------ START ------------------
   setenv TOSEXT  TOS,TTP
   setenv TOSRUN  u:\opt\toswin2\tw-call.prg
   launcher = u:\opt\toswin2\tw-call.prg
```

run u:\opt\toswin2\toswin2.prg
------------------- END -------------------
As a consequence, I can't (un)pack archives, build guides, aso.
3- Kobold seems to have problems too, that I will try and define
so i can describe them correctly.
4- the Home folder seems not to be used.
What is the "usehome=yes" line for ?
Wouldn't there be a line like "setenv HOME <path-to-homefolder>"
somewhere in the cnf ?

Yes, I know, that's a bit long, but I didn't find answers to those
questions - even on http://xaaes.atariforge.net/index.php - so far.

Regards,

J.-Luc

Then something is wrong with your setup. Could you post a complete (unsorted) list of your AUTO- and CPX-folder? And also a copy of your current mint.cnf and xaaes.cnf? MiNT runs very fine on CT60, I know several people that are using MiNT on the CT60-Falcons. Also, both the main developers of FreeMiNT (Frank Naumann) and XaAES (Odd Skancke) own and use CT60-Falcons.

> the system unstable - as Bubble Gem, for instance - and the only
> one that I know still being active is Xcontrol, which I have no
> other to replace with.

I use COPS on my Milan. Haven't used XControl since around 1996.

> I hate those crashes that happen with no reason, and that disappear
> just as they came, without letting us find what happened. :-(

Do you have TosWin2 running and with the console window open? Is there any debug output from MiNT or XaAES when this happens?

> 1- despites the keytable.tbl that i built and put at the same place
>   as MINT.CNF, my PC keyboard behaves like an original ST one. :-(

It's keyboard.tbl, not keytable.tbl, and I see that I've got it wrong in the docs for KeyEdit. You can use KeyEdit to edit the keytable, it's available for download on my web-page (http://atari.nvg.org/).

> 2- TTP's and TOS' don't launch anymore, despites XAAES.CNF containing
>   the following lines :
>   ------------------ START ------------------
>   setenv TOSEXT TOS,TTP
>   setenv TOSRUN u:\opt\toswin2\tw-call.prg
>   launcher = u:\opt\toswin2\tw-call.prg
>   run u:\opt\toswin2\toswin2.prg

Looks correct, as long as the paths are correct. It could also be a problem with the settings in your desktop. What desktop do you use?

> 3- Kobold seems to have problems too, that I will try and define

What kind of problems? Kobold doesn't understand anything but plain FAT16, on any other kind of partitions it falls back to GEMDOS.

> 4- the Home folder seems not to be used.
>   What is the "usehome=yes" line for ?

It tells XaAES to include $HOME in the search path used by shel_find().

>   Wouldn't there be a line like "setenv HOME <path-to-homefolder>"
>   somewhere in the cnf ?

Either in xaaes.cnf or mint.cnf.

    FLC/FLH should be playable with M_Player, see on my page.

    Guillaume.

BubbleGEM runs fine here. Anyway, something is very wrong with your
setup. Are you sure you are running the 060 versions of mint.prg and
xaaes.km? No mix up? Also, have you removed the MagiC patches? I
remember there were a lot of those when I received my Falcon.

In addition to all the above I found that installing NVDI greatly
improves stability on my CT63 Falcon. Probably because it disables the
blitter.

Make sure, you have execute right both on "u:\opt
\toswin2\toswin2.prg" and "u:\opt\toswin2\tw-call.prg". Easymint
installs them without granting execute rights.

> the docs for KeyEdit. You can use KeyEdit to edit the keytable, it's
> available for download on my web-page (http://atari.nvg.org/).

Well, this is taken from KeyEdit Hyp :

```
   -------------------------- START QUOTE --------------------------
   FreeMiNT >= 1.16 will look for a file called keytable.tbl
   in the current system directory. To use your edited keytable, save
   it inn the MiNT directory and name it keytable.tbl.
   FreeMiNT will then load this keytable and use it at the next boot.
   -------------------------- END QUOTE ---------------------------
```

Seems to work better, now that I renamed it the correct way. ;-)

OK, I wondered why it wasn't mentioned...

Thanks for your help,

Regards,

J.-Luc

As my MiNT setup isn't stable yet, I'm very happy I still can switch
to MagiC! when I need to (un)pack files or run any TOS/TTP program,
that don't under MiNT.
So any stuff related to MaciC! is still there, but deactivated thanks
to Menu6 when booting.

it looks like tw-call.prg doesn't have the execute rights enable, you
can set them from THING, select the file and right click with the
mouse on it, then in the popup menu select "show info" or "zeige info"
in german and select "atributte"....

Hi J.-Luc,

Sorry to hear about your problems! I looked quickly at your list and have a few comments for you. Hopefully you'll find the source of the problems, since this is indeed a very stable system and it really flies on a 060 machine.

> =A0 =A0 3719 May 25 10:32 ct60xbio.prg

AFAIK you shouldn't run this on a freemint setup.

> =A0 315800 May 25 10:32 mint040.prg
> =A0 320850 May 25 10:32 nvdi.prg

Not sure, but I think NVDI should go before the mint kernel.

> exec c:\mint\68882.prg

Hmm... I know I need this on the Hades, but I don't think this should be executed on the CT60 since this stuff is available in the CT60 TOS. Can anyone confirm this?

> >> =A0 =A0Wouldn't there be a line like "setenv HOME <path-to-homefolder>"=

> >> =A0 =A0somewhere in the cnf ?

Which kind of EasyMiNT install did you make? I have a "login" install on both my machines, i.e. I have to enter user and pw when I start the machine, then I start XaAES manually from the command line. In this case the home folder should be handled automatically (note however that since XaAES is a kernel module, you'll need to start it using sudo unless you're a root user)

I assure you I run ttp/tos programs on daily basis and I use just standard easymint configuration... strange that execute permission isn't set, I had never problems with that. the same for $HOME variable, are you sure you're looking into right place? (<your ext2 partition>/root) I never set this variable manually...

Your second problem (instability):

1. Use NVDI. I don't know why exactly but it seems original VDI uses blitter -> XaAES uses VDI -> XaAES crash as soon as some blitter access occurs.

2. mint.prg should be the last program in auto folder. and please, remove that mupfel.ttp, this is asking even for more problems :)

> =A0 =A0running accessories and reboots. :-/

There are several ways to shutdown the system
- Task manager (control+alt+escape) IIRC
- Command prompt (type "shutdown")
- Some desktops
- Some taskbars (i.e. "Taskbar")

> 3- The EtherNAT's LEDs light-up, the screen displays something about

You're 100% sure that your TCP/IP configuration is correct?
Also, did you put enter a mac ID for the card in ethernat.inf?

Is this necessary on the CT60? I'm not familiar with the CT60 firmware, but I had the impression that the FPU-emulator is installed by the CT60 booter. Do you have to run 68882.prg when using TOS or MagiC?

> exec u:\usr\sbin\gluestik

It's worth commenting out this one unless you're actually using STiK/STiNG-clients.

> > Do you have TosWin2 running and with the console window open? Is there any

Ok, so no error message in the console window?

Yes, as I said, I got it wrong in the KeyEdit docs...

Exactly. If you want USB pen support, start coding. Don't give me the
"uuh I don't know how to code"-thing, because I didn't either a few
years ago. Don't wait for others to fix it for you.

You're right, NVDI must run before MiNT.

> setenv PCONVERT PATH,HOME,SHELL

HOME is set, but doesn't contain a value. That's why it's not used. I suggest setting it in xaaes.cnf, and use a DOS/TOS-style directory. E.g.

setenv HOME d:\home\

You can use the same HOME as under MagiC, then you'll keep your settings between MagiC and MiNT.

Control+Alt+L

You can also halt the system with Control+Alt+H.

>  - Command prompt (type "shutdown")
>  - Some desktops

Teradesk will shutdown correctly, and also power down when running on a
CT60.

>  - Some taskbars (i.e. "Taskbar")

Taskbar just runs the program pointed to by $SDMASTER. So in order to be
able to shut down from Taskbar (and other programs evaluating this
environment variable) SHUTDOWN must point to a shutdown program.

It's automatically started. It's an option at instal time.

Thanks,

J.-Luc

How do I do that? All I can do is set the TV to channel 3 or 4 (and of course the 3/4 switch on the Atari itself).There's an auto-tuner built in to my TV set, no fine tuning dial like on sets you'd have in the 1970's. I'm using a coaxial cable with coax-to-RCA adapter to give the least RF video noise. Also tried an old fashioned RF switcher box from my Atari 2600...no difference.

Quick question: what is the video shifter and where can I find it? :)

> went bad?

Yes but for the Vortex test, I didn't use the NOVA, it was plugged in the VME port, but I put a standard SM124 monochrom monitor in the video output.

Does the TT/MSTE Nova have a separate 12V lead like the Falcon-version
does? If so, it's possible that you've disturbed the 12V feed to the Nova
when you installed the ATonce.

Atari got delisted from NASDAQ last week.  I guess the $40 million
worldwide ad campaign promised from the 90's is kaput.

Yes Ed, I got on the WebSite. Also, I told Roger on the phone and he updated
his old link I have to his Current Web address! Thanx! =-=Ben=-=

Hi Sebastian Pohl,

> i just got a bunch of pictures of an interesting 19" Atari modification.
> ... Does anyone know what this thing realy is ...

As i read 19" Atari i remember a project from a german electronic magazin
ELRAD (from 1992) which rebuild a Mega ST to a 19" version.

>   http://www.twisted-artwork.de/pics/atari1.JPG
>   http://www.twisted-artwork.de/pics/atari2.JPG
>   http://www.twisted-artwork.de/pics/atari3.JPG

Your pictures show a atari with housing. Because the ELRAD project did only
show the 3 cards, i did not see, if your project was based on the ELRAD
project.

Best regards
Michael Bernstein

Hehehehe, how it must irk you, that us Atarians are still around...

Do you badger the Amiga newsgroups as well, I wonder... :)

FamilyNet International Newsgate

Ok, Penguin powered is the Atarimax BBS, which has NEVER worked for me since 1999. Cold Winterknights was a great BBS, gone for about two years. Ainside is Marius's 8-bit BBS, gone about a year, and the ST Guild seems to come and go.

I was thinking the Grove BBS was back up, but misplaced the tlenet address for that. Trying to update the BBS list on the Prison Board. :D

Hello,

As suggested in the subject : is there any way to have an usb
flashdisk working on the EtherNat ?

Regards,

J.-Luc

Sorry J.-Luc, I can't help you out...but I do agree that we atarians
are in dire need of usb drivers, else what's the point of the usb
ports on the ethernat?  If someone could come up the drivers for usb
mice, flash drives, printers, cameras, etc, it would make the ethernat
that much more desireable.  Too bad the usb drivers from Linux can't
be used afaik.

First one has to be a lucky boy to own an Ethernat. I do not,
unfortunately.

I hope that the USB driver situation will be a bit more planned and
organised compared to the TCP/IP-stack-world ... worlds.

So, once again, we've been fooled! :-(
We bought a device that reveals totally unuseable for non-MiNT users
and partly useable only for MiNT ones... :-(
I think I'll never trust anymore anyone else than Rodolphe for anything to be added to the Falcon. At least, he ensured his products
would work fine on every common OS people run.

In my opinion, any device that relies on using another OS such as Mint,
will not advance the Atari platform. This only makes the number of users
of advance hardware smaller.

I think anyone who wants to develop hardware and or software, should develop
for the whole or most of the platform. So that new users can pick it up
easy.
Most people simply don't have or don't want to take the time to install
another
OS so that they can run a piece of hardware.
We needed USB support for along time now as well as other things to keep
the platform going.
If possible, stick with developing items that will work with TOS and the
whole
platform will benefit.

Greetings everyone!

Here is the lucky and proud winner of the May 2008 prize
at The DarkForce! BBS:

May 2008
1. ST Magazine - Twilitezoner wins the free 3 mag. subscription

Congratulations to our winner!

Also, here is June's prize:

June 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

:)

I have found some time to look at the Vortex and Nova.
Here is some info on the Vortex 386SX that may help.

To start the Vortex 386SX with the default values you have to start the
program ATONCE.PRG from GEM. You should see a boot-message,
that gives you some info about the system configuration and you'll be asked
to insert a DOS system Disk.
You will get the usual DOS promp "A>" and you then know that it's working.

The Default settings are as follows...

One 3.5 DOS floppy drive (=internal floppy drive with then name "A".
No Hard disk.
VGA-monochrome-graphics video-emulation.
640KB DOS-Base memory.
Extended memory is 0KB.
Expanded memory is 0KB.
Atari-Mouse as Serial-Microsoft-Mouse (together with a Microsoft-compatible driver, e.g. MOUSE.SYS, version 6.10) on COM 1.
Serial interface on COM 2.
Parallel interface on LPT1.

Returning to GEM
Press the key "G" during the boot process to return to GEM Desktop.
If DOS is already loaded you can leave the AT-emulation with GEMDOS.EXE and return to the GEM DeskTop.
If DOS is already loaded press the "Left Shift","Alternate", and "Undo" keys together,
and you will return to the GEM Desktop.

Reset the system with the (Control, Alternate, and Delete) keys at the same time.

Skip the memory test of the 386SX by pressing the ESC key.

The INSTALL.PRG is started from the GEM Desktop. It allows the setting of all
operating parameters. To use the existing components of the (ATARI) computer system, it has to be configured, this is done using the (install.prg on the Vortex
system disk).

The settings are saved and stored in the (ATONCE.CFG)
There are quite a few options to select.
*Setting up the hard drive correctly is one of the most important!
(Too many details to go into here.)

*However you should be able to run the basic system using just a
Floppy Disk.
There are 3 different boot- settings, (Floppy Boot, Floppy/Hard disk
Boot, and Hard disk Boot).

There are several types of Floppy Disks supported...

1.44MB-2 sides-80-tracks- 3.5-format.
720KB-2 sides-80-tracks- 3.5/5.25 format.
360KB-2 sides-40-tracks- 3.5/5.25 format.
360KB-1 sides-80-tracks- 3.5/5.25 format.

With the program (INSTALL.PRG) you can determine the assignment of
the Atari Floppy Drives A and B to the DOS-floppy drives A and B.

According to the manual Windows 3.0 will run in Enhanced Mode.
If you ever try to run Windows, Never Invert the EGA-Screen with the

SHIFT+UNDO as it will cause Data Loss.

* When you are setting the configuration of your ATonce 386SX emulator with the INSTALL.PRG, you must not install Expanded Memory (set it to 0KB !).
Assign all free memory or your (ATARI) to EXTENDED Memory!
Also the EMM.SYS driver you will find on your ATonce 386SX SystemDisk is NOT needed! (IT's is there only for compatibility reasons to other vortex emulator-products).
(I'm not sure which products, but that's what the manual states).

All settings that have been done with the INSTALL.PRG will be stored in the emulator-
file ATONCE.PRG as well as in the configuration-file ATONCE.CFG.
If Install.prg is used another time and if changes have been made, Install.prg automatically
generates a new ATONCE.CFG file. The old one will be renamed in ATONCE.OLD.

According to the manual DOS versions larger or equal 3.2 should be used mainly because
of the support of 80 track floppy disks. If DOS 4.1 is to be used the 80286 varaition is
available.
Also according to the manual MSDOS 5.0 can be used with the Vortex 386SX.
But I am sure one could probably use DOS 6.XX or better.
On my FalconSpeed 286 board, I ran Win 3.1/DOS 6.22 with no problems.

FalconSpeed is alot like the Vortex 386SX, except there seems to be some difference
in the way Hard disks and partitions are used.

I also have 2 SuperCharges, I haven't used for along time, It ran off a hard drive and I still
have the system, just not connected up.

I like what you did with your SuperCharger, I found a CO-Processor in an old 286-12mhz NEC that I put in my SuperCharger a few months back.
The 286 is also socketed, and could be used for projects.

The MEGA STE

I looked for info on the dip settings, I have some info on it here somewhere.
But for now all I could find is a diagram of the settings which to my knowledge
is how they are suppose to be set with an internal hard drive.

The Blue 8 selector switch settings located on the right front foward corner,
All Switches are down toward the front of the Mega STE except for (7)
which is up toward the back.

The NOVA Graphics Card

I don't know if you have the manual or not.
But it stresses the importance of installing the card correctly
or damage to the card and system can occur.
Pretty much the same as with the Vortex 386SX.

Here is the order of the drivers and according to the manual
they must run before anything else.
EMULATOR.PRG
MENU.PRG
STA_VDI.PRG
STA_VDI.BIB and EMULATOR.BIB need no
particular order.
An auto folder organizer such as XBOOT, MouseBoot is very useful.

A two monitor system is very useful since you can observe the process of
booting up and the possible errors.
On a MSTE, you can have your SM124 monitor still plugged into
your monitor port.

When starting the NOVA Graphics Card, Hold down the two Shift
buttons while booting up and you'll get the NOVA MENU.
When at this Menu, its very important to set SubMenu "a" and "b".

I hope this info helps in some way.
I will check on a few other things, asap.

BTW, Mplayer is really helpful.

Yeah, that copying mint.prg into auto folder and mint directory to c:
is really time expensive operation...

I understand your concern, it would be definitely better to have
drivers for both sting and mintnet but remember, there are only
limited resources (in manner of atari programmers). It's not HW
developers' fault MagiCNet is dead and author disappeared. So if you
want to use your Ethernat, I recommend you either do that "time
expensive" copy operation or code driver by yourself.

USB stack is another story but honestly -- in case they decide to
develop something as huge as this, would you be willing to accept the
waiting for the Ethernat another 3-4 years? Me definitely not.

Ahah? Just doing this would allow MagiC! users to use MiNT-Net
drivers ?
I wonder why such an important news hasn't been unveiled so far...

I'm not sure if I understand you correctly but yes, copying one prg
```

and one directory is enough for installing whole FreeMiNT (if you
aren't interested in unix stuff) and Ethernat drivers.

> I wonder why such an important news hasn't been unveiled so far...

What about reading README in FreeMiNT release? There's such clear (and
exhaustive for each situation) explanation I can't imagine what else
you could be looking for.

!?!?!?!?!?

I'm sure 99.9% users believe (just like me) that using MiNT-Net
requires whole MiNT stuff installation - not only a prg in auto
folder and some drivers to and fro -. :-/
Now, you mean that any MagiC! user could benefit MiNT-Net facilities
just at a glance ?
Once again, I always thought that installing MiNT-Net and other

related stuff, one would need some "make" commands that can only
be brought by MiNT itself, MiNT-Net beeing closely MiNT-dependant
in my mind - and more than surely in most non-MiNT users' one -.
>

Er... unless I didn't understand anything at all, it doesn't seem
possible to boot MagiC! and let it launch the kernel by putting it
in the START folder (just the way we do for MagxNet).
On the other hand, if my understanding isn't that much bad, I could
benefit multitasking and lfn just copying some files, and so wouldn't
need MagiC! anymore, that's right ?
By the way, I think the CT60 doesn't need the prg in auto folder...
Well, if it doesn't affect my config - ie, if I still can run Thing
and such other stuff - and can use my EtherNat, I think I will give
it a try and, then, maybe write a french "How To" for french users.

Please, tell me if I'm wrong somewhere...

Regards,

J.-Luc

No, you are not wrong.
you can have a multitasking userless GEM capable of lfn (and/or ext2
and/or Minixfs) by following the instructions in the above mentioned
readme (simple installation). Both N.AES and XaAES can start Thing
for you if you tell them to do so in their cnf files.

Though I cant tell if such a setup is enough for the ethernat.
If software expects certain users, this simple setup is not enough.

This is possible. But once again, yes, this is everything you need, no unix stuff, no ext2 partitions, no command line stuff.

Hey, wait here. You can't of course boot MagiC! -- it's separate OS, just like FreeMiNT is. So you can't mix up these two. Either you have to boot into MagiC or into FreeMiNT. But as Henk says, all your settings (Thing, ACCs, ...) are preserved and you can use them.

About Ethernat: I admit, it's a little bit tricky. There are some files which are present in standard unix environment (configuration stuff -- like /etc/resolv.conf) and you have to copy it into some TOS partition and cut the name (e.g. d:\etc\resolv.cnf). Hell, I can't remember where I've seen this. Some guy posted his configuration for ethernat boot... yes, I know! It was on dhs forum. I'll try to search for that and post it here. It was really something like zipped 5 files which you copy to C: and here you are.

I've had Mint installed before, Installing the basic is simple enough.
You can do that with Geneva.
However, I don't like having to run a certain OS to get Ethernat.
It sounds rather PC ish.
I'm not knocking Mint, but why must it be used for this hardware
to work properly?

Finding people to code anything on an Atari now days is rare indeed.

I think I have duplicated your problem on my MSTE, I had a similar problem
the other day when I got my MSTE out of storage.

To make a long story short...
You may have to reconfigure your internal hard drive.

With the Vortex installed, the internal hard drive is seen as Unit 1 not
Unit 0.

I had all kinds of trouble with that for awhile.
Also, be sure that the Vortex is seated in the socket firmly.

I could reformat and partiton my hard drive only as Unit 1. But still the
original system disks would not install the hard drive driver.
I tried a couple versions of HD Driver, and the only one that worked for
me was version 6. It saw the drive and the partitons after running the
driver in the auto folder on the floppy disk. I then went on an configured
the hard drive. Works great now.
Also, you may have to use 4 partitons, not sure on that, but I tried 2
custom ones with the MegaSTE advanced hard drive Utilities disk
with no luck. I had to select a preset partition setup from the menu.

It took me awhile to get it working as the Atari Hard Drive Utilities would
not install the driver due to the drive being Unit 1 instead of Unit 0.
I tried setting jumpers on the drive with no luck.
The drive is the stock 46 meg Seagate.

So, I used the original Atari MSTE Hard Drive Utilitie Disk to
format and partition the drive, and HD Driver 6 to install a working

driver so that the hard drive would boot up upon start up.
I copied over the MSTE System Disk all except the shdriver.sys
and the Newdesk.inf

And it works just fine.

One nice suprise was the system Clock. It had kept the correct
time and date after all these years!
Was a suprise after seeing the trouble with other Atari system clocks.
date was shown correctly as 05/19/08.

Then stuck a VIDI ST 12 cartridge in and had some fun.

OK, let's sum-up...
I spent over 3 hours yesternight trying to have it run properly :
- copied mint.prg in my auto folder,
- copied mint folder including 1-16-1 and xaaes at the root of c:\,
- edited both mint and xaaes cfg to match my system,
- rebooted and deactivated (thanks menu6) all magic! related stuff,
- kept my fingers crossed... and
 despites I correctly set up (I think) the env (home, etc, usr,
  Thing, video, ...) variables, I could only get monochrom ;
 I tried to set the mintnet stack to match my settings - it seemed
  easy, while my magxnet config is based upon mintnet -, but, once
  again, I couldn't even get the leds of my ethernec blink.
  I then tried with the ethernat, and there again nothing, while
  with magic at least it lit, even if it made the system crash.
  With mintnet, it looks like it weren't seen by the system.
Today, as my work let me a little free time, I went browsing the net
and found that :
http://atari.st-katharina-apotheke.de/home.php?lang=en&headline=Mfl&texte=mfd
From what I understood (or, rather, what I think I understood), it
seems that the best is to run a total install. Though this site is
somewhat outdated, and maybe things changed a lot since then...
Now, just a question : I read that I would have to format a partition
as either minix or whatsoever.
Suppose I download easymint, find a free partition on my disk, format
it to ext2 and run easymint... will I be able to tell him to install
on the right partition, or will it put all stuff where he wants and
destroy my system ?
This is very important, as I can't backup my files anymore due to
problems with my scsi bus...

Regards,

J.-Luc - somewhat dummy there, I confess...

In fact, the real problem is that some developpers earned money
selling (at the time) powerful software that people bought trusting
it would last a little longer than pc stuff, then those developpers
retired without releasing their sources and because, in most cases,
the software has still commercial status, nobody can make further
development on its basis.
I mean about MagiC!, CAB, NVDI, and some others that we bought and
are still sold rather expensively though quite outdated.
For instance, I own legal copies of all three, and none of them has
evolved for 5 years at least.
That make me fell somehow a little disappointed...
And we must rely on free stuff made by people that don't earn
anything to have our machines run...

>

To install EasyMiNT, which is at version 1.70 I think, follow these simple steps:

- read the doc. If you don't, don't go any further and just watch TV or have a beer. Really. I'm not kidding. Don't try to install if you haven't read the doc;
- don't format *anything*. *Set* a partition as type LNX with Hddriver (option Change Partition Type);
- launch the Easymint installer which will find the LNX partition and format it;
- select Falcon 040 for a CT60.
- register as a happy user to the author of EasyMiNT who is asking nothing more for his work.

You'll then have a complete up to date MiNT setup. It is, really, quite simple to install. I'm not just saying that it is. It really is. Go install Windows after that and you'll see what I mean.

Cheers,
JFL

So, mr. self-appointed guru of knowledge.... what file systems should
we target for reading usb sticks? ext2? fat32? fat16? What O/S? Plain
TOS? Magic? Mint? Something else maybe?

If you don't like what people say here, why keep reading this
newsgroup?

Problem is it doesn't work like that. The FreeMiNT kernel has proper support for device drivers, whereas TOS and MagiC has not. This, and the fact that it's a good idea to keep APIs etc. similar to that of the unix-world in general, means the preferred way of writing device drivers for FreeMiNT differs significantly from that of the other two.

This doesn't mean there can't be compatibility. A good example is the STiK API vs. MiNTNet, where compatibility has been solved by means of a wrapper daemon.

An aspect that people seem to forget is that while all these OS:s sport the same user application compatibility, they don't share the same functionality or features internally. The FreeMiNT kernel and recent AES:s has functionality not found in legacy systems like TOS/MagiC, and it is sometimes difficult to write stuff without using this functionality. What complicates things even more is that MagiC costs cash (still), which means you can't even test your stuff without having to pay for something which is A: essentially dead and B: you don't want to use anyway. As a user however, you have the option to support the ongoing development by using stuff that is being actively developed, including the OS.

This is cool :-) The beginnings of a good old-fashioned OS war with some personal attacks thrown in. Just like in the good old days. Usenet was so much more fun ten years ago.

Second that. I installed EasyMiNT last year, until then I used the same KGMD-setup that I had used on various computers (Falcon, Falcon+AB040, TT and Milan) since about 1996. The quality of EasyMiNT is nothing but amazing. I don't use anything else on my Milan, except for the rare occasions where I need to test something under TOS. As long as you have 10Mb or more of RAM, I don't see any benefit in using MagiC instead of MiNT/XaAES/EasyMiNT.

MagiC has proper support for device drivers, although it looks to me that it offloads a lot more work to the driver (and the developer!) than the API used in MiNT. It also has support for loadable filesystems similar to MiNT's, but I don't know the details. They're not binary compatible though, that's for sure.

MiNT-Net and MagiXnet-drivers used to be binary compatible though. I'm not sure why they're not compatible now, as the XIF-interface doesn't appear to have changed in MiNT-net. There might be some other reason why this particular driver doesn't work with MagiC.

> same functionality or features internally. The FreeMiNT kernel and
> recent AES:s has functionality not found in legacy systems like TOS/

Indeed! Using new features AND be compatible with MagiC means adding lots of code to emulate the new features under MagiC. This means wasted time and efforts, which we really can't afford with the small number of developers left.

> cash (still), which means you can't even test your stuff without
> having to pay for something which is A: essentially dead and B: you

I'd like to test my stuff under MagiC, but will wait until some sends me a
free copy of MagiC-Milan ;-) I already have a legal copy of MagiC 6.1, but
that one doesn't work on the Milan.

    Hi again,

I could run again my Mega STE from the Hard Drive, connectors were not correctly plugged I think.

With the Vortex:
- I can't run Install.PRG, two bombs! But, the same program from the same floppy runs well on the TT. But it's useless as I want to set the Hard drive... And partitions on the TT are not the same as on the Mega STE.

With the NOVA:
- still not working. When I unplug the board from the Atari, I have to pull using the connectors. I suspect this may have damaged some connectors. I'll try to re-solder them.

> BTW, Mplayer is really helpful.

Thanks!
What do you use it for? Playing videos or creating ones?

Guillaume.

I have installed a earlier version of Mint years ago, right when all this
Mint stuff got
started. I used Geneva for Multi-Tasking at the time and still do.
For me at the time, going down the path of Mint just didn't make much sense.
All my hardware and software worked with Geneva, some work even better.
Yes you can install Mint with Geneva to get true Multi-tasking, but I really
haven't
tried a full installation of Mint as it is today.

Question, does Mint Today, run on machines with TOS 1.4, 1.62, 2.06?
Mint Today, Good name for the software? 8-)

Question: Will hardware such as graphics boards, CPU accelerators, Cartridge
based
hardware like VideoMaster Falcon, Replay 16, Vidi ST/12 work under Mint
Today?

If it doesn't, work with the existing good hardware that we have, then I
really can't
make use of it, other than to install it on a spare Falcon I have and use it
that way.

I have Magic an original version 4.xx, and Ease, never tried them.

I have stuck with Geneva or using the original TOS simply because I know it
works, and isn't a hassle, even though Geneva hasn't been upgraded in
sometime,
it beats using just plain TOS if you want to run more than one program at a

time.

I blame Multi-TOS for starting the trouble. It was released before it was really useable. Everyone went Multi-tasking Crazy and thus brings us to were we are.

MiNT does not depend on TOS. However, I have not used MiNT on a 68000 since MultiTOS in 1992, so I don't know how well it performs. And 4Mb is not much.

> Question: Will hardware such as graphics boards, CPU accelerators, Cartridge

I've used a Nova, an Eclipse and an Afterburner on my Falcon running MiNT since 1996.

> based
> hardware like VideoMaster Falcon, Replay 16, Vidi ST/12 work under Mint

I don't know about these as I don't own any of them.

I agree, Geneva is very good. I've used it a lot myself, and IMO it's the
best OS on a 4Mb Atari. It's still very limited compared to FreeMiNT/XaAES
and MagiC > 3 though.

> I blame Multi-TOS for starting the trouble. It was released before it was
> really
> useable. Everyone went Multi-tasking Crazy and thus brings us to were we

IMO MiNT has been the superior OS for Ataris with more than 4Mb RAM ever
since N.AES 2 was released.

Hello lp,
   Long time NO talk! Well the old Magic and MINT battle. I am sure
this is all true since you are a coder and all and well aware of what
the ins and outs are of both OS's. But lets be reasonable here. If I
had the 1/2 the knowledge that anyone else that claims they could have
written a work around for this MagicNET on EtherNAT thing it would have
been done by now and no one would be writing on this newsgroup about not
have a driver for this card.

>
> Then a coder comes along who happens to use MiNT, and for whatever reason

> can write the magic driver. But do they? ;-))

Sure this is true but really what is programming. Me being a programmer
on the 8-bit line of Atari computers I know that programming is nothing
more than hacking a computer to do what you want. Where there is a will
there is a way.

>

No none of it is hard when using the EasyMINT installation. But here lies the problem. MINT does not allow the usage of some programs that were MAGIC only like Emailer, Fiffi some other ASH products. Those are great programs and I still use them to this day. So anyone wanting to use MINT has to do what? There are some cool things in Magic that I have not been able to find for MINT and vice versa. But I am not willing to dump Magic for MINT entirely, because of the lack of some of these applications. That is why I currently have the availibility to run three OS's TOS, Magic and MINT on my CT60'ed Falcon. I would like to get 2 systems running, one with MINT and one with MAGIC so that I can use both over my network.

The hand install of MINT is crazy since EasyMINT is available. I certainly would not recommend that for any beginner. Start out with EasyMINT and if you have a working setup and do not want to get rid of your existing setup you can install MINT on your current HD and partition before beginning the installation. This will all be covered in my MINT Tutorial coming soon.

Why cant this be done with this driver for MINT to work on MagicNET??
There has to be someway of getting MagicNET to work with this driver in
some fashion.

I am more than willing to help in anyway I can. I have Magic with Jinnee setup and ready to test any programs that anyone is willing to throw at me. Call me a beta tester to the programmers. For a living I write procedures for my work place in a very structural manner so desciptions of problems that are happening will be very detailed in deed. Anyone willing to work on this I have some money on the line for the project and I am sure there is several others that would join me in paying a few bucks for the effort so that it does not go unrecognized.
Anyone else with me??

Hello Jo Evan,
That is interesting to know.

That is VERY interesting to know. What was coded differently in the versions of MINT or MINTNET that would have caused a problem with the API as has been stated is the problem??? Was something added to this particular driver for MINT that makes it not work the same for MagicNET??

As I stated basically the same thing that you have to create a work around to get your idea to work. There may not be a direct feature so to speak that can be accessed but there is always a way to get anything to work on any device if you think about it long enough.

Jo Evan I can certainly help you out testing your stuff so that it works under Magic. Would you like me to beta test your stuff and get back to you on it?? Anything in particular you wish me to start with?? I wished I had the Milan version as I only have the regular Atari version.

> - I can't run Install.PRG, two bombs! But, the same program from the same floppy runs well on the TT. But it's useless as I want to set the Hard drive... And partitions on the TT are not the same as on the Mega STE.

2 Bombs means a Bus Error. It could be that you have a hardware problem that needs fixed on the MSTE.

Or it could be that your internal hard drive is set to unit 0 and the MSTE
is seeing
the Vortex as Unit 0 also. This will cause problems. I had this problem just
a few days ago and had to set my internal HD to Unit 1 and reconfigure it.

How big are your internal hard drive partitions on the MSTE?

I don't know if your Vortex software is the original disk and configuration
or not.
The default configuration is for NO Hard Drive, so that you can boot off a
Floppy
before setting up the hard drive.

If someone saved a non-default configuration to the software disk, then this
could
cause you problems.
You might try making a backup of the Vortex software disk and deleting the
.CFG file
and then run Install.prg.

>
>   Thanks!
>   What do you use it for? Playing videos or creating ones?

Both actually. I have alot of video hardware and software for the Ataris.
I'm really suprised at how good VIDI ST 12 is on the MSTE.
Full Screen Video is possible, and the Still Grabs are really nice.
No Audio digitising like on the VideoMaster though 8-(

Part of the Vidi ST 12 software works in GEM which is a suprise.
I wonder how the Nova would work with it, something to look into.
Also want to try the Toki Line software. It was suppose to be
Professional Software, went Freeware years ago.

Hi Didier!

DM>This update works under MiNT and also under MagiC (screenshots are
DM>under MagiC) since fork call are removed, but I cannot use get a
DM>connection with MagiCNet.

That's kinda strange. It doesn't work for me, either.
Here are two snippets of MANITOR logs, one with WGET and one with =
links. WGET is succesful, links fails. But why?

```

Bonsoir

As always, download on my webpage, or directly in the folder:
http://rajah.atari.org/files/ -> kkcmd10b_uk.zip (90KB)

If you don't know about this program, it's a shell �-la-total-commander, very very basic. Can run in ST monoTOS 320*200, or under MagiC with long filenames.

News:
- MiNT Memory Protection compatibility (no more crash at start, at least. remove of RESERVE at initialization)

- remove of LPEEK for TOS detection (use of GEMDOS version)
- some minor changes in the RSC for ergonomic purposes
- mouse button right click = click on the "~" button

So it seems i have found how to produce .prg MiNT MP compliant. Please
tell me if it works correctly under you hard-core user mint computer.
And i will fix/update my other programs.

Voil�

Mark was looking at this program at the last club meeting; he tried the "move" option to move a file from one window to the other, but the original file remained after the operation. This would have been with the previous version, and using MagiC on a souped-up Falcon.

Hello,
I now have some Dallas DS12887 Falcon NVRAM/Clock chips in stock, you can find them on the hardware page of my website at http://www.sgmelectrosoft.co.uk.
Price is �7 each including postage and a socket (chip and socket together may not fit in standard Falcon case), I am selling to UK and Europe only as I suspect that with additional postage cost and the exchange rate US Falcon owners can find them cheaper locally, if not e-mail at the address on the website for prices.
If you are an Atari dealer and want to buy in quantity e-mail me using the address on my website for prices.

Note: People belonging to Cheshunt Computer Club should contact Mark Branson in the first instance as he has already secured a quantity of clock chips for club members.

A register verion of the Falcon STOS extension by Anthony Jacques can be download from the software page of my website.

Stephen Moss

Perhaps the "atari" way:
- dragging a file makes a copy
- dragging a file, with key Control pressed, makes a move

I tried to reuse the key shortcuts/behavior of the TOSdesk and Magxdesk,
not those on PC.

Regards

Pierre

The MagiCNet developer - did he loose the source code? I mean,
couldn't it be updated to match 7+ years of development? :) (well - or
- patched to keep up sort of :-).

> i think it isn't much work (better said, it's more dull than much
> work), question is, if it's really worth that troubles... much better

> letting users to discover this world (which has some future...)

Indeed. Too bad if people are discouraged because they *think* it's
difficult to use freemint just because of slightly trickier
installation procedures.

Try to ask Falcon / TT / Aranym / Hades / Milan / CT60 users how many of them are using TeraDesk and how many of them are still using Thing/Jinnee...

Good point. Why else would you want a high-end machine if not to take advantage of its features?

> Summary of this my crappy post is there's no point in discourage coders from creating new cool desktop. I really can't do this, I have so many atari projects open... this would be suicide ;)... but someone else... may be still hiding and we're going to see some surprises ;-)

All development is good for the platform. It's better to have "something" instead of "nothing". Then again, I might think differently when people want to re-invent the whole concept and write a new OS or something, but that's another story. We need applications, desktops included.

I am no programmer for the Falcon I have to admit or I would do it
myself and release the sources to all for further development. I
might be interested in learning. But time does not permit me to do
this very often. Really what is needed to do what is being asked??
Really all Magic users are not asking for the world here. Just to be
able to keep using there machines as they were.

I have tried and tried and tried contacting him over and over for the
last 2 years or so and have not gotten any response. I am sure all is
possible but with a software developer that is not able to be reached
it is impossible to get this done.

I am currently running 3 OS'es Magic, Mint and TOS. So this is not
the issue. I want to remain able to use all my hardware and software
without having to change everything around to be able to use Multiple
OS's.

> you're right Peter, no way. however, i've got strange idea when i was reading this -- what about tracking cvs changelog for mintlib and to look, where those changes occured? then it would be (in theory) possible to do 2 things:
>
> - disassemble magicnet and to find that bad offsets and replace it with the right ones (better, but harder solution)
> - compile ethernat.xif against this archaic mintlib and run under magicnet (easier but not good for future development)

Honestly how hard is either of these to do?? I would be willing to learn if someone can teach me all of this. And at some point I could take this MagicNET even further. Is anyone up to the challenge to teach a novice. I do have 8-bit atari programming experience. This would certainly be a learning experience and as small as the MagicNET driver is at 3-4 KB might be the exact thing needed to get my feet wet into programming on the Falcon. What kind of tools are needed to get this job done?? Let me know and I will keep up my end of the deal by downloading necessary tools and programs needed to get the ball rolling. Who knows if I catch on maybe some cool new stuff may come out of my computer for everyone's enjoyment.

Thanks,
Falcon060

I think this is most a "communication" problem : at the time orders
were made, it was that the MiNT driver would work on MagiCNet, just
the way the driver for the EtherNec did.
Unfortunately, MintNet was updated while MagiCNet didn't.
I never read on Nature's site that the only supported environment
would be MintNet. I think, if that had been, people wouldn't have
stood still, and maybe a solution - else than "use MintNet and shut
up!" - would at least have been on its way, unless found.
Yes, since 2 or 3 days, I know that had been discussed on dhs forum.
But I didn't knew about it before, and as most of the buyers, I would
have expected some relay on nature's site. :-(
The reason why I'm not angry - despites whatever you could imagine -
is that I understand it's an amateur (opposite to commercial) project,
that they brought on their free time - and I know too well what free
time is worth! -.
But, once again, something like "Hey! guys, there's a problem with
MagiCNet! who can try and see it ?" on the main groups would for sure
have helped everyone to save time.
As for switching to another OS : I disagree with obliging people to
use another OS that the one they did so far. This already happened
years ago - did one forget this ? - with Micro$oft.
In my case, installing FreeMiNT or whatever other distrib wouldn't
be a real problem : I have a second 20 GB HD just for that purpose.
But, I have been used to store data, programs and system where *I*
want, and not let the OS do it's soup on his own.
With the MagiC installation that I'm currently running, the system
is on C:\, except some parts (the fonts and drivers, for instance)
that I placed on E:\, which contains data, while the programs are
located on D:\, some other parts being stored on other partitions.
This way, I'm almost sure corrupted data won't lead in the loss of
my whole data. Does MiNT allow this ? I read it used to mix everything in one place... :-/
Sorry for being so long, but I thought the problem had to be analyzed
in a way that would help things to go on with no hurt.
I hope I did success. :-)

Regards,

J.-Luc

I don't have any issue with Mint. I have a completely functional Mint
setup on my Falcon. But there are times when I would love to be able
to hop into Magic and not have to reboot back to Mint to say surf the
internet. It would be nice to be able to bounce back and forth and
all the hardware and most software (except Mint specific and Magic
specific) would just work. I am willing to learn and I think this

maybe the perfect project to try and revive. Anyone willing to go in with me and help me learn or teach I am up for the challenge.

Offer is open ended.

it isn't necessary very *hard*... but you need a lot of experiences,
both in debugging and development area, especially in 68k asm and C
languages coding... so for sure task not for any novice...

i agree it would be nice to have it under magicnet but you know --
even when I (or someone else) find the source of problem (bad offset,
changed binary format, ...) there's no guarantee it will work
immediately. OK, ethernec is working but ... you know, you can be
never sure. so it may be completely waste of time.

I agree this could have been handled better with some official statement. On the other hand, MagiCNet *was* supposed to be compatible with MiNTNet. It's not always easy to forsee these things... The thing is, they did release the source code for the driver, but as of yet no MagiC programmer has picked it up.

> As for switching to another OS : I disagree with obliging people to

> years ago - did one forget this ? - with Micro$oft.

I think get your point, but I don't agree with the Microsoft analogy at all. This scenario is completely different.
Developers are faced with one dead OS, and one that's being updated and supported. Writing software for the latter means supporting ongoing OS development, hence it's a natural choice. It's not about forcing users to upgrade for commercial purposes.

Nah, it's not like that at all. MiNT is very flexible in this aspect. You can have your data anywhere you like, and on filesystems which are much more secure than FAT & Co. The only fixed path is the MINT-directory, where you keep the kernel and device/filsystem drivers.

> Sorry for being so long, but I thought the problem had to be analyzed

FA: Steinberg / SoundPool Falcon Digital Interface (FDI)

This is from my studio. Having recently sold my Falcon here in the group, I no longer need this little red box, so it's up for auction on ebay:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=320246299007

My complete Cubase Audio Falcon 16 software package is also still on ebay. It'll be ending in a little over a day. If you're interested, here's the link to that:
http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=320243939563&ssPageName=STRK:MESE:IT&ih=011

Thanks!

FA: MIDIman Mini Macman MIDI Interface (Falcon & Mac)

Here's another item from my studio that I used with my now sold Falcon. This little MIDI interface works with serail port equiped Macs, but also with the Falcon using the LAN port, and a special Cubase Audio Falcon MROS driver.

It's a cheap way to give your Falcon an extra 16 MIDI channels.

I'll supply the winner with the MROS driver too.

Here's the link:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=320246364034

Thank you.

For auction - an Atari Falcon in a PC style Tower case. Includes an integrated SCSI CD-R drive, 14M RAM and HD. This is a very tidy re-case with all the Falcon's rear connectors accessible at the rear via a custom panel, and the 2 x MIDI and 2 x JOYSTICK ports accessible via additional sockets. The ROM port is accessible internally.

I am very willing to learn most certainly. But if nothing comes of it maybe I can help lend some support in other ways to try and at least make a runnable version of MagicXNET. I can offer testing if no one else wants to mess up there there setup. Certainly if it is not hard I wonder why no one has looked at the code for MagicXNET and seen if there was anything obvious. It would seem to me that nothing has changed with MagicXNET for years and someone somewhere knows what has been changed by MINT developers so the same logic could then be applied to the MagicXNET driver then. I mean if it comes down to money I would certainly be willing for someone to come up with a working driver for MagicXNET so all people that are running Magic could benefit from this. Any further discussions with any programmer would be entertained. Get in contact with me in this group or via private e-mail and lets talk.

Talk to you all later,

Carey

I'm under the impression that most MagiC users use another network stack than MagiCnet.

Yes, this is very positive, but, as you mention it...

> ...but as of yet no MagiC programmer has picked it up.

Unfortunately. :-(
Would it happen to be no MagiC-understanding programmer over there ?
Or, rather, no MagxNet-understanding one ?
I'm sorry I have no knowledge in MagiC, MagxNet, MiNT or so. :-(
The only thing I can do, is testing.
>
> .../...
>
> I think get your point, but I don't agree with the Microsoft analogy

Yes, it was a rather straight shortcut... ;-)
(Hope it means what I think it does...)

> .../...
>
> Nah, it's not like that at all. MiNT is very flexible in this aspect.
> You can have your data anywhere you like, and on filesystems which are

Ahah!? That seems rather good - for me, at least - ; but what for the
remaining MagiC users that may not have the possibility to do so ?

BTW, if some programmer reads this - I did mention it already, but
it may have been unnoticed - : the MiNT EtherNec driver is seen by
the file-info utility as an executable (ie fastload, TT-Ram and Run
in TT-Ram flags can be (un)set), while the one for the EtherNat is
not.
Maybe it could help... ;-)

Regards,

J-Luc

>Did you try these key combos, Mark?

Yes I did.

I've found out what the matter was. You can't click on a file/folder
before you hit the Control key. With my Magic/Jinnee setup you can.

Also you can't use the radio buttons to change your action so it seems
silly to have them.

Hi,

May I suggest you to listen to the following Pandora podcast

<http://www.filedropper.com/blues>

It teach us about Blues Music, and has a surprise for our ears :-)

It's a pity <http://www.pandora.com/> is restricted from abroad :-(

ATARIstically yours =3D)

So as silly to keep it for oneself and not bugreport it... coz it's a bug : forgot to read what radio button was selected. next update.

Though here, the move will not be a "rename" (if same partition and TOS >= 1.4), but a copy and delete of the old files (even if same partition and TOS >= 1.4).

Regards

Pierre

Hi,

If I trust what's written in the freeMiNT mailing-list at

<http://tinyurl.com/59efu7>

by Frank Naumann, there is a very recent tagged version in the
freeMiNT & XaAES developments' CVS.

What I would like to know is about a binary release of kernel,
AES and tools. It use to be released binary at unofficial WEB

<http://xaaes.atari.org/>

but it's not. Not either on official sparemint atariforge
or <ftp://sparemint.org/pub/sparemint/mint/kernel>, strange.

Is there a public announce currently pending ? Is there a
binary package prepared for those who can't build the binaries
themselves ? Any good news about freeMiNT & XaAES release ?

We're looking forward to get binaries, not RPM please but in
an ATARI readable format, if you care for "old school" users.

Best regards,

Hello,

How can I confugure Aranym to get the Falcon video emulation?
I want to get exactly the 640x480x16bits. I know it's slow ti emulate this
hardware, but I need it.

Thanks!

Guillaume.

Strange questions to ask on CSAT, particularly if you're reading the
MiNT mailing list.

[...]

> We're looking forward to get binaries, not RPM please but in

RPM is as much an Atari readable format as anything else readable on an
Atari but anyway I fail to see how a new FreeMiNT kernel could be of
any use to "old school" users but that's just me.

I'm not. I'm time to time reading the mailing-list archive.
Sorry, but I can't look after everything going on everywhere.

RPM meaning Red Hat Package Manager is a Linux format i.e. not
readable by an "old school" ATARI user. When I get a RPM package
I must use `rpm2cpio` then unarchive it under GNU / Linux on
my Mandriva Vaio, and then transfer it to my ATARI machine.

Do you better understand my question ?

Thanks,

Regards,

What's wrong with RPM? IMHO, RPM is as much readable as anything else on a MiNT based system.

Anyway if you really want a for you readble format get the RPM's and extract it. Then you can make a gzip or whatever for you suitable format.

```
rpm2cpio foo_bar.rpm | cpio -ivd
```

-i extract the files
-v show name and size of every file in the rpm
-d create the needed dirs

Kind regards,
Martin

Hi Martin,

Thanks for your answer. My question is about freeMiNT & XaAES release.

`rpm2cpio` can't be done under Mac OS X with my configuration.

```
Last login: Fri May  2 09:10:01 on console
Welcome to Darwin!
[albatros:~] admin% which rpm2cpio
rpm2cpio: Command not found.
```

This is specific to Red Hat Linux like distributions.

Regards,

Who cares about Mac OS X? You asked about an Atari readable format, not
a Mac OS X one.

> [albatros:~] admin% which rpm2cpio
> rpm2cpio: Command not found.
>
> This is specific to Red Hat Linux like distributions.

No, it's specific to operating systems making use of the RPM packaging
tools as a convenient way of handling software installation.

rpm2cpio is available for freeMiNT/XaAES. And as we are talking about freeMiNT I can't see the point.

> This is specific to Red Hat Linux like distributions.

RPM runs very happy on a MiNT based system too.

HTH,
Martin

Well, even if it is tagged, there has been no official release.
Hence there is no reason to upload anything anywhere in any format yet
from what I can tell.

Hi Martin,

Martin Byttebier writes :
> What's wrong with RPM? IMHO, RPM is as much readable as anything else o=
n a
> MiNT based system.

I'm working with a minimal ATARI disk image that doesn't include
a command shell. I really can't install RPM packages. If I could
install packages, that'd mean I would have installed a peculiar
freeMiNT distribution, what I haven't done ... It's a simple
"old school" ATARI installation, looking like what was installed
with my Falcon30 in 1993 when Multitos was provided with it.

The minimal installation disk image I'm working on is located at

<http://eureka.atari.org/xa-my-aes.zip>

The command line shell is not strictly required for an ATARI OS.

This is also the case of my Hades 60 that boots with freeMiNT 1.15.12
and N.AES 2.0, because I had so many troubles with recent kernels. RPM
packages are useless for me, and I won't change that. I already tried
to install recent kernels, but I was forced to reformat my hard disk
and reinstall from CDROM backup, from scratch, really painful indeed.

So, because I can't handle RPM with freeMiNT, I must do it with
`rpm2cpio` with a Linux Red Hat like distribution (Mandriva).

It would be very simple for peoples like me to release kernel,
AES and tools (not all the freeMiNT distribution) like it always
used to be done :

    <ftp://sparemint.org/pub/sparemint/mint/kernel>

It's about four years there's no such a release I'm afraid.

Best regards,

Before my Hades broke down I was running the latest kernel (1.16.x) which
I compiled from cvs and latest XaAES also compiled from cvs without any
problem. On my Hades XaAES proved to be more stable then N_AES.
Although I had a working N_AES 2.0 system I prefered XaAES for daily use.
The only thing I didn't use was memory protection because some programs I
used on daily base, like Okami mail/newsreader, couldn't handle MP that
well.

There are some snapshots of my (dead) system on:
<URL:http://xaaes.atariforge.net/screenshots.php>

Ok, I get your point now.

CU,
Martin

Bonjour

Download on my website or directly in the folder :
http://rajah.atari.org/files/ -> litchi11b_uk.zip (100 KB)

News for this FTP client (STinG or compatible):

- bugfixes:
   - no more crash at launch under MiNT with Memory Protection (*).
   - removed bad TOS version detection (LPEEK)

+ shell capability in the local files window. Just programs launches.
+ the none-executable fichiers can be opened if an AV_SERVER is present.
+ Control is detected after drag'n'drop, for files moves
+ Alternate + mouse click : several items selected if one was.
+ mouse selection if an item was not selected (adding files with shift
   is allowed, but while the rubberbox is active)

(*) could not test with both MiNT Memory Protection AND MiNTNet. If
someone could do it and tell, thanks.

Voil�

reBonjour

Download on my website, or directly in the folder:
http://rajah.atari.org/files/ -> kkcmd10c_uk.zip

Changes (thanks Olivier Landemarre & Mark Branson):

- removed unnecessary code
- if right-click on unselected file, select it. If a selection alrealdy exists, no effects.
- mouse selection with rubberbox (initiate it on an unselected file).
- Control key detected also at the end of drag'n'drop (for files moves)
- Alternate key detected with mouse click (select one file, then select another + Alt key pressed)
- radio buttons correctly read in the confirmation dialogbox for copying/moving files.

Voil�

I will work this week-end on my gem games to work with MiNT Memory Protection, without recompiling yourself.

Regards

Pierre

Martin Byttebier a écrit :
>(if MiNT MP, please recompile it with a compatible GFA lib).

Sorry, forgot to fix the doc: no need to recompile it since 1.0B
version. The archive already provides a PRG compatible with MiNT MP.

Regards

Pierre

Good move, because recompiling oneself can be very painful. I tried it
once and it hurt like mad.

Bonsoir

Download directly in the folder http://rajah.atari.org/files/ but I strongly advise you to get the files from the webpage (link at the end of this post). All updated files are dated on the May 3th-4th 2008.

These releases are bugfixes for MiNT setup with Memory Protection mode:
no more crash at launch. If you'll never use MiNT, you need not to get them.

I had a lot to fix, verify, archive and upload, so please tell me if
there's something i forgot (ie some global malloc forgotten for bubbles
or stguide or other utilz).

List of games and toys fixed for MiNT MP:

- DGEM (and its level editor)
- Rosemary Racoon's Strip Game
- Manga Puzzle (1)
- Teenage Queen Reloaded
- Sygne
- MyJester
- Tramiel Quizz
- VDI_FX

(1) found a bug on the image conversion 256c -> TC32 (MagiCMacX), may
correct it or not...

Next step: same fixes for my applications and utilitaries... Please be
patient, there's really a lot to correct, test, zip, upload.

Voil�

Pierre

Hi,

Thanks for the answer. The one you gave is correct.

I updated the ATARI Search Engine <http://eureka.atari.org/atari.html>
erasing persistent invalid links. For the following link

 >> <http://www.atariactive.com/>www.atari-forum.com

I modified it with <http://www.atari-forum.com/> because it is valid.
The other bookmarks seem to have disappeared from the WEB unfortunately.

I will test missing ones later ... Just in case.

Best regards,

Hi Lonny,

lp writes :
>> <http://www.atariactive.com/> www.atari-forum.com
>=20
> This one is back to the older url <http://www.atari-forum.com/>

That's what I discovered just after submitting the post. There's
```

no problem with this ATARI-Forum listed in my personal bookmarks

     <http://eureka.atari.org/atari.html>

> Ever heard of Google ?

Of course yes ... If one looks at the ATARI Search Engine given above,
you'll see I'm using *Google Co-op* for my own *Custom Search Engine*
I created this ATARI Search Engine with the ~600 bookmarks listed there.

May I advise you to use it for your ATARI searches ? Just put its code
in one of WEB pages where you'd like to provide dedicated ATARI search ?

Best regards,

The last sentence/question is in fact the important one. What an artist likes is irelevant. What is relevant is that the interface is convenient -to the user-. Icons or whatever other symbols are used to communicate with a computer should be simple, quickly readable by the user, standardized and possibly human-language idependent. Use of gradients, blurs or transparencies seems to me to be counter-productive in that context. The "icons" need not be the likenesses of anything- just easily recognizable, difficult to misinterpret, graphic shapes. A set of highly-stylised Chinese-like or Egyptian-like pictograms comes to mind.

OT: for a long time we were taught (more-less) that pictographic writing was used mostly by "primitive" societies early in human history, and that it was made obsolete by the invention of phonetic alphabets. Lately, we are seeing a significant revival of the use of pictograms, which prove to be more convenient when it is necessary to convey instantly-readable messages, or communicate across language barriers. On the other hand, increased use of pictograms, together with increased graphic power of computers and telecommunications devices, seems to indicate the onset of wide-spread, computer induced iliteracy- fewer and fewer people will want to actually read or write anything and a richness of words will be gradually lost.
I am not sure that humanity will benefit from such development.

Very true. Icons have indeed evolved from actual pictograms to small, pretty pictures mostly used for decoration.

It could be done already now if you're using N.AES, which has a clean way of installing a separate fileselector. The file-browser could then be used as a fileselector as well. I'm not so sure that you'll gain much in terms of memory, as there probably will be some overhead in the code to handle the two modes. But if it's properly designed it will enhance the user experience.

This is only your opinion, and it is not that of, say, Apple, which is
held nowadays as the be all and end all of interface design -- a view I
don't share myself.

What I meant to say is that by allowing true colour icons you allow the
guy/gal who will actually do the drawing full control over it's
creativity. By limiting the display to 256 colours you don't. Liking or
not liking what he/she does with the 16700000 colours at his/her
disposal is just a matter of opinion.

Hi guys,

Firstly, sorry for going off topic like this, but I figured some of
you might wish to help a fellow atari user out! ;)

Me and some of my buddies from work joined a competition between
different work places in our town. The whole fun consist of ppl
normally not being musicians performing a set of 3 songs. Now, we did
not make it to the final directly, but with some (a lot of it,
actually!) help we might have a shot of winning an online voting -
which would give us a wild card to the finals :)

And voting ends on April 30th....

Feel like helping us out? Please..? :)

If so, go to this page and scroll down to the bottom of the page and
select "First Clas" in the submit form, and then press the button
named "R=F6sta".

URL: http://www.pitea-tidningen.se/tavlingar/kompledig.aspx

Now, vote away! And by all means, tell your friends (and their
friends) to lend a hand too!

Thanks in advance!

Regards,

/Joakim

Well, since my Falcon is no longer in my posession, I decided to sell my Cuabse Audio Falcon. It's complete, everything is there, and I'll include a backup CD-R of the software itself (including the last updated version Steinberg released), just in case there are any issues with reading the disks.

Here's the link if interested:

An interesting role playing / adventure game for the Falcon.
Since I no longer have my Falcon, it's up for auction.

Paper in my manual shows V2.02 update . I don't recall ever getting any
updates, after purchase, for it. That was long before internet access for me
so no idea if ti was the last or not.

N.Fsel hooks into N.AES using a clean interface. I'm not sure if it's
documented anywhere though.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Hello,

Is there someone running MagiC! / MagiC-Net who could set up his
files so the EtherNat can run ?
Despites everything I tried, the best I could obtain are 3 bombs
and computer hang when accessing the board at boot.
What I did : copied Ethernat.xif to Ethernat.mif into the Xtension
folder, created the inf file with the mac adress of an isa board
in the same folder.
Unfortunately, that doesn't work. :-(
Must I add something into the inf file ? I assumed it would use
the magx_rc.net file, but... would I happen to be wrong ?

Regards,

J.-Luc

Dear Atari users,

once again, we have some nice stuff for our beloved machines. We've got tired by fixing old Atari mices, "spamming" recent Atari dealers / hardware makers if they really are out of stock with Atari mices and/or converters for connecting some recent (PS/2, USB) ones.

Fortunately (for you ;) we have made a decision to produce own batch of hardware. What is this all about? Yes, we're going to produce completely new batch of PS/2 adapters for every Atari 16/32-bit computer! You can use any PS/2 mouse and connect it to your Atari. No need for soldering or changing the original case -- everything fits into nice little box connected by thin cable directly to your mouse port.

In case you already owns our previous piece of hardware -- SatanDisk -- you're aware of the fact we mean it seriously, you can count on quality, good support and communication and mainly -- damn fair prize! One PS/2 converter (we call it P2AM -- as PS/2 to Atari Mouse) will cost you only 15 Euros! Compare that prize to PeST or any other PS/2 converter...

But we're not done! Not only you can use this device for your Atari but in case you own also our enemy from the past (read: Amiga ;) you can use it here, too!

And finally, you can ofcourse buy (nearly) any of that fancy USB->PS/2 converters and connect USB mouse to your Atari in this way!

Since the SatanDisk production we gained also a lot of experiences and got quite a feedback from you, users, we've completely remade our "business websystem", you're going to be damn surprised how friendly and professional looking is now ;)

One last note: there wont be pre-order phase. So please take a very good look, when is the deadline for payment shipping. After this date we can't guarantee you will be able to buy anything. And of course, please, tell all your Atari/Amiga friends about this, you wouldn't believe how very late we received some requests for SatanDisk availability... be careful this time! ;)

Hello J.-Luc,

I have a full working MagXNet system complete with Iconnect, Gluestik/Sting, Draconis and of course MintNet. While I am of course not the programmer of this very nice internet stack that brought everything together from years of multi internet stack programs. I am somewhat of an expert in setting this stuff up. My EtherNat's are on their way (yes I bought two). First thing I see, while I am not sure that it matters, is that you renamed Ethernat.xif to Ethernat.mif. Not sure that it is critical of the name of the first part of the filename but you never know. Mine is named ENEC6.MIF. Try rename it from Ethernat.mif to ENEC6.MIF and of course make sure it is in the XTENSION folder under Gemsys/Magic directory.

What is this inf files name that you speak of??? If it is the magx_rc.net file that you speak of. Then it needs to be in the Gemsys/Magic/Start folder not in its current location which you speak of which is xtension directory. If its some other file that you have created I am wondering for what purpose when it is not required any other files than what came with the MagXNet files. Now I think there may need to be some tweaking of this Magx_rc.net file, since it makes reference to en0 when (correct me if I am wrong MINT users) Mint uses NE0 as references to the ethernet adapter. Have to read up on it and see if this is the case. Just my two cents hope it works!! Then we can have a MagicNet setup working on EtherNEC.

Enec6.mif is the driver currently used by my EtherNec.
On their site, Nature provide an archive containing the driver for

MintNet, which has a xif extension, so I renamed it mif, as I did for the EtherNec's one.
But, what was working for the EtherNec doesn't for the EtherNat. :-(
Moreover, I can't figure in what changing the name from Ethernat.mif to Enec6.mif could help making things better : the important is that the driver, whatever its name, is at the correct place, isn't it ?
Anyway, I tried to check the bits of the driver (fastload, etc.), and found that it isn't recognized as an executable... :-/

Have to read up on it and see if this is the case. Just my two cents hope it works!! Then we can have a MagicNet setup working on EtherNEC.

In the readme into the zip file, they say to create a file at the root of the system disk with a mac adress, and rename it to ethernat.inf - what I did -.
They say too that the board must be referred to as en0 - just like the good old EtherNec! -, and that the cable must be plugged at startup in order of the board to work.
I don't really mind to run Mint, except it might slightly slow down my machine. :-/

Regards,

J.-Luc

Was not sure that that would work.  Right now you are trying out
everything that I would be attempting to do if I had my EtherNAT.  So
until I get mine I am hoping that I stumble onto something with you that
causes the EtherNAT to work.

Root of the system disk hmmmmmm..... Would that not be C:/ drive???
Not in the same directory as the Ethernet.mif???? Well then the en0
thing is rather encouraging. That means that all the files that MagXNet
uses will not have to be changed to refer to anything other than en0.
Let me pull the documentation off of their web site for the EtherNAT and
see what I can see.

Hope I can help with this.

Hello,
I forgot to ask this but I guess I also assumed that your MagicNET
setup works fine under Magic with the EtherNEC??? The only thing
obvious that I see without looking further at your setup is that you may
have put the ethernat.inf file in the wrong place. I hope this helps
you (and me as well).

Hello Carey,

Yes, my EtherNec config works fine. :-)
About the EtherNat.inf, I tried with it at different places, including
Xtension, Home, and C:\, and always the same behaviour. :-(

Regards,

J.-Luc

Well my next suggestion would lead me to believe that there must be a
way of telling MagXNet that the MAC address has changed.  I would say
that we need to investigate all files with MagXNet and figure out how
and where it is looking for the MAC address.  Since it is probably
looking for the EtherNEC instead of the EtherNAT.  At least this is
what I am hoping.  I am not in front of my computer at the moment.
But I will look tonight and see what I can see and report back any
suspicious areas that may help us to get this to work.

Hi,

Now Links can load and use externel SpeedoGDOS fonts, it's faster, for
more informations for activate it:
http://aniplay.atari.org/links/index-e.htm
http://links2.atari.org is created but actually not active.

Direct link for the archive (sources, rsc and prg):
http://didier.mequignon.free.fr/files/links-2.1pre33.m68kgdos.tgz

This update works under MiNT and also under MagiC (screenshots are under
MagiC) since fork call are removed, but I cannot use get a connection
with MagiCNet.
VA protocol and drag & drop are supported.
Background window redraw faster.
"connection would bock" problems are fixed.
Icon bar redraws on multiple windows fixed.

Regards,

Didier.

I don't think it works this way.
In fact, I'm quite sure it depends upon the driver to tell the
system to use a device hokked to the rom port or the expansion
one.
In the case of the EtherNec, the driver is built to act through
the ROM port, while the EtherNat's one tries to access the
expansion port.
So, it would be of no use to try and tweak anything regarding
the MagxNet config.
The solution would be, since MintNet was updated unlike Magx-Net,
that someone installs a Mint/MintNet config up-to-date at the time
Magx-Net was brand new, and recompile the driver so it could work
with our outdated Magx-Net setups. :-/
Or, even better, if someone could get hold of Magx-Net sources and
update the system - dreaming is free, isn't it ? -. ;-)
BTW : the EtherNat has resurrected the "plug'n'pray" days. :-(

It would appear that the pickup tag I received in my mail last night
is from Sweden!!!!  So that means hopefully my EtherNat's are here and
in good order.  Just out of curiosity have you checked all files
located inside of the etc folder???

Hi Peter,

P Slegg writes :
> LE COAT Francois wrote:
>> I first typed it (hex code) with my fingers on a Sinclair ZX in 1981.
>=20
> Yes me too. The code was in a magazine in GB, probably "Your Computer".=

> I might still have it somewhere.

For me it was in the "L'Ordinateur Individuel" still existing as a
French computer magazine, so long time since this good old year 1981.

I still have the Sinclair ZX that I bought, but it is broken and
doesn't boot anymore, with its 16Kb RAM extension. I also keep plenty
of recorded tapes with the programs I've written at this time (from
1981 to 1986). It will become unreadable one day if I don't care
for these ... But I don't have the corresponding tape recorder (UHER)
unfortunately. It'll surely disappear from the magnetic tracks.

Thanks to the Breakout Game, I learned the Z80 assembly machine language =

(almost similar to 8085 I discovered later on with HP computers) with
the book of Rodnay Zaks <http://en.wikipedia.org/wiki/Rodnay_Zaks>

So I first started enjoying computing thanks to Sir Clive Sinclair, with
the game that was originally created by Steve Jobs and Steve Wozniak
when they were both working for ATARI Corporation.

It is noticeable I didn't start with "10 PRINT BONJOUR" but with
"10 REM C64A59B22D ..." or something like that ... Pretty complicated !
Because ZX81's thermal printer was almost unreadable in the magazine.

Do you know if any ZX81 emulator would have ported this Breakout Game ?

Best ATARIan regards,

Thanks alot. I will appreciate the support and I do love the program. Works
great....

What kind of Atari are we talking about? I would either go with a DaynaPort
SCSI Ethernet adapter (hard to find) or else the NEC2000 which is an ISA card
that hooks up using the Atari's cartridge port (what I use right now).

I browsed the sources myself, looking for a possibility to do just
this, but it seems I don't have to worry about that now! Thanks agan
Didier, can't wait to try it out!

Yeah man! Speed increase is dramatic!

It does get the hickups here and there and blocks the system, but it's
only a matter of waiting a couple of seconds and then it's fine again.
While it doesn't quite rival Highwire in speed yet, it's not that far
behind either.

Again, great work, Didier.

Guys,

Afaik the driver doesn't work under MagiCNet.

Check this: http://bbs.dhs.nu/ct60/index.php?request=8444

What interface?

When I look quickly over a disassembling, I see that it install a new AES trap
for fsel_input and fsel_exinput. Maybe it do more, which I saw not.

> I'm not sure if it's documented anywhere though.

And you have more information? If yes can I have them, I add them to the tos.hyp.

Gerhard

I could be wrong, but I remember some talk about this interface and the advantages of it. However, when I look in the docs for N.AES and N.Fsel now I can't find anything about it. SO I'm probably wrong :-)

Thanks a lot for your efforts Didier. I am glad to have a browser on my ATARI that is capable of Javascript and SSL. Unfortunately on my Afterburner equipped Falcon with NOVA graphics card (1280x1024x256 resolution) both versions of Links are very slow. Especially rerendering when changing the window resolution takes a lot of time.

Perhaps I did something wrong or is it just the fact that the Afterburner is so much slower compared to ct60?

Regards,

Frank

Thanks a lot !

I see inside the sources some parts of code where display background pictures exist but seens not a priority by the authors. There are also 2 empty fonctions inside img.c never called because the html parcer force to filling.
And I think it's too hard for me to add this.
I have send a complete french translation to the main author and also asked about my GEM port and patches, but actually without answer.

Didier.

Hi Uwe,

IIRC, I have version 3.20, I'm not at my software storage ATM so that
may be the wrong version number.
I'm actually outside at the moment. 8-)

Anyhow, When using OutSide on a Stock Atari such as a 1040STe or
Falcon 030, will the software keep up with software/hardware packages,
that allow Video and/or Sound Digitising?

That's the main reason I'd like to use it, so that I can Grab very long
Video and
Audio Clips.

I found what I think will work.

I had forgotten that I bought several adapter boards a few years back.
Found them while looking at my Panther Graphic board adapters.

Which now I believe were made for the MegaST, due to the long
68000 empty socket on them with pins for a long 68000 socket
on the other side.

Adapter Boards...
On one side is a socket for the long 68000, and on the other are
pins configured just like a square 68000.
2 of these boards are from Compo and the other 2 are GE Soft from
Germany. All of them look the same except for the color.

I have a Fast Tech. 16mhz upgrade (long 68000). That's switchable
between 8mhz/16mhz. But it does require a power source. Think it was
made for a Mega ST.
So hopefully, I just have to plug them all together in my 1040STe.

I suppose this is what these boards are for.
Does anyone recall any other hardware upgrades for the MegaST or etc.,
that connected over, or in place of a long 68000?

Maybe using one of the adapter boards I could get a Panther working
in a 1040STe which would be nice. Of course the shielding would have
to be modified, but I think it will all squeeze in there.

I had my MegaST4 socketed so it would accept an ICD AdSpeed and a TEC card to add TOS 2.06. Connected the TEC card so TOS was switchable. Geeze that was a long time ago. Seems like the AdSpeed was on the original CPU and I didn't go to the socket until adding the TEC card.

I had a PC Ditto2 on the CPU for a while too. I was one of the lucky ones that got it working. Unfortunately lost interest after discovering it was only 4 color.

AFAIK everything was made to fit the CPU so they could be used on the standard ST too. Megabus connector is still a virgin.

Could the boards be an adapter to use a square CPU in the MegaST/ST? Seems like an adapter like that was made. Don't recall details or even for sure.

Was wondering if anyone has attempted to upgrade or modified this software.

I would like to have a Converter program, that will convert the Video and
Audio
files made with the VideoMaster Falcon cartridge and also the ST/STe/Falcon
VideoMaster Cartridge into popular modern video/audio formats, or at least
one or two of the older formats like .AVI

Also a Converter for Video made with Vidi ST and Vidi ST 12.

It would probably be possible to do that with these boards, but they would
have to
be modified/ fitted with a couple rows of pins and a socket for a square
CPU.

As is there is just a plain socket for the Long CPU and very small pins for
the
Square CPU. It looks like one leaves the Square CPU in place and inserts
this
board into the socket overtop the original CPU.
There are no componets on the boards, not even a resistor.

According to the dates, they were made in 91/92.
Maybe they are just various project boards?

This depends a lot on how this software actually works, you should give
it a try.

If I remember well what I've done... M_Player is able to load a Video Master film an replay it... Now, I can't remember if I added the support for disassembling such videos into images files that you can then re-assemble into AVI, MOV.

M_PLAYER is also able to convert a video on the fly: but with a very ugly way that only a basic TOS can support.

Guillaume.

Hi,

Here is a screenshot comparing

- Hades 60 (freeMiNT 1.15.12 + N.AES 2.0)
- G4 MDD 1.25GHz (Mac OS X Panther)
- PlayStation 3 (GNU / Gentoo - Linux liveCD)
- EeePC (WinXP)

<http://www.filedropper.com/hihihi>

The first three machines are mine. The last three ones run ARAnyM.

Regards,

you're right Peter, no way. however, i've got strange idea when i was reading this -- what about tracking cvs changelog for mintlib and to look, where those changes occured? then it would be (in theory) possible to do 2 things:

- disassemble magicnet and to find that bad offsets and replace it with the right ones (better, but harder solution)
- compile ethernat.xif against this archaic mintlib and run under magicnet (easier but not good for future development)

i think it isn't much work (better said, it's more dull than much work), question is, if it's really worth that troubles... much better would be to code super-user-friendly GUI installer for FreeMiNT for letting users to discover this world (which has some future...)

For the best compatibility, make sure you are using Rainbow TOS (TOS 1.4) and at least a DSDD 720K drive, like the 314. TOS 1.2 will do PC compatible disks but had a few glitches. With Rainbow TOS, you can format the disk in the Atari and directly read it in the PC. I have transferred many files between the PC and the Atari this way with no problems.

Hmm... Weird. Could it be that your kernel is compiled without AKP
support? Try searching mint.prg for "keyboard.tbl".

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

> For the best compatibility, make sure you are using Rainbow TOS (TOS 1.4) and at least a DSDD 720K drive, like the 314. TOS 1.2 will do PC compatible disks but had a few glitches. With Rainbow TOS, you can format the disk in the Atari and directly read it in the PC. I have transferred many files between the PC and the Atari this way with no problems.

But be careful with the disk format: if you use DD floppies, no problem on both machines. But if you format a HD disk on the Atari in 720k, most PC will detect the high density and expect a 1.44 disk! So you have to fill the HD hole on the disk to make it act like a DD.

Guillaume.

Month ago I have bought a new IDE disk (Seagete 20GB). On this disk I wanted to install EasyMiNT. I made a several partition form C to J (for TOS system below 1 GB, next partition is LNX for MiNT (8 GB) and the last two partiotion for Magic system FAT32 about 3 GB.
On the LNX partitions I installed easymint (1.72) with the NAES+Thing, but I dont know why, system shows only half of disk partitions (4 GB).

Best regards
Piotr M.

What hard disk driver are you using? And on what system you get less
partitions? Mint? Magic? PlainTOS?

Hi Peter & Ekkehard, I have tried Links with different MiNTLib under MagiC:
0.56.1, 0.57.3 and 0.57.6 and I get always exception socket from select().
The main problem with MagiC was fork used for dns, Links can works without fork or thread with NO_ASYNC_LOOP but the program is just locked a bit if the dns cache is empty. So this problem is fixed.

I get (under MiNT now ;-)) sometimes a problem with the MiNTLIB and non-blocking sockets, select() return data on read or write but when I use read() or write() theses functions return EAGAIN, and sometimes during and infinite loop (with infinite retries for not get "operation would block"). I have found a solution, I change the socket to blocking mode when select() returns data on read or write and now it's OK.

I have also fixed a redraw bug on the GEM icons bar on multiple windows.

About the compiler, I use always GCC 3.3 on my Falcon/CT60.
About MiNT I thinks I havn't a lastest version because it's an 1.16.1
BETA.

Now I think we have a great browser, I test again a little bit and
update a tgz archive.

Didier.

There is a simpler solution if you still have the Atari, and the
diskettes are standard 80 tracks and 9 sectors/track: There is a
PD program called DISKMOD.TOS (7187 bytes) that needs BLOCK0.DAT
(512 bytes) in the same directory. If you put the old Atari disk
in the drive (with write-protection off) and then run DISKMOD.TOS,
it writes a new IBM-style boot sector (from BLOCK0.DAT) to the
disk *without affecting anything else on the disk*. You can then
run the disk on the PC.

I suggest for the first disk or two you make a back-up first on
the Atari, but I have never known it to fail (although there may
be problems with 'skewed' formats, but the older Ataris did not
produce that).

If you have problems locating the programs, send me your email
addrress and I'll forward them to you.

Regards, /Peter/

Ok, but on what system can you not see all the partitions? Or is that
for all of them?

When you made the 1gb partitions, how many mb did you typed? From my
personal experience, 1gb is 1023mb in hddriver, NOT 1024. 1024 will
cross some limits. (although my system is partitioned with 2gb
-2047mb- bgm partitions, working fine)

I'd say you made a mistake when you entered that numbers ;-)

Try to run HD Driver again, go to partitioning and look if your
partitions are really such big.

I type 1000 MB And I have not any problem with this partitions in TOS
and other systems.

best regards
Piotrek

Greetings,

Question...

Did all 1040STe Computers have the Square 68000 chip?

And is there a adapter board that will allow hardware boards produced
for the long 68000 chip in older STs to connect to the 1040STe 68000
square socket?

If so, anyone know where I might locate one?

Thanks,

Hello,

Can anybody comment me this assembly source?
It's a DMA transfer but I'd like to understand every register used.

Thanks by advance,

Guillaume.

As far as I know. Yes. The only differences I know of between STEs is that some had SIMM memory and other SIPP depending on availability at the time of manufacture...

I don't think there is room under the shields. I think also the leads would need to be reasoanbly short...

FamilyNet International Newsgate

A long time & stable Dallas BBS, The Prison Board, has offered to provide a "Favorites page" for the Atari BBS users. Other users (like Tcropper) and I provided an up to date BBS list of the active Atari sites out there, and Rueben (PB Sysop) created a place you can go to, bring up an Atari telnet menu, and go directly to that Atari BBS. icon_smile.gif   (Recently a Commodore BBS list has been added too.)

Ever been curious to see the online world of Atari computers? Come check out the Prison Board BBS:

972-329-0781 (this number good for people want to try out Atari modems, and dialup means.)
216.62.20.217 (This IP number is great for Lantronix users, and has not changed for a considerable time.)   [IP Still accurate April 13, 2008] (also telnet://rdfig.net)

Trying to dial in with a stock Atari 300/1200 baud modem? You poor soul! But this has been less painful with a new feature. When you log in and the BBS asks for your log in name type "*[First name] [last name] [password]" and you'll skip over the log in screens and get taken directly to the main menu.

Never has the online Atari world been so easy to access from your Atari computer. Simply call up the above system, get to the main menu, X for the internet menu, and then A for the Atari menu. From there, it is simply a matter of hitting 1 through 9 for the Atari BBS's. Atari BBS's in many cases run on real Atari computers like the one you're calling with. Both chats are there, and one BBS is listed that you will not see anywhere else.

And the Prison board makes a great E-mail service too. icon_smile.gif You can E-mail the outside world with a real E-mail account, and if you wanted to surf the web on your Atari computer (especially 8-bits) there are telnetable locations with Lynx browsers you can hit from the Prison Board's telnet out feature.

Let me know here if you have any questions, and many thanks to The Prison Board BBS for this awesome service.

Naturally a BBS sysop loves more users, but seldom have I seen a sysop that have bent over backward for his users that he would be a pretzel at this point. Changes that Rueben has added as of April 13, 2008 for the retro computer community, and all I had to do was ask nicely and give feedback that you've given on how to make it better:

1) Added the Atari BBS list
2) Opened up 300 baud support. (this is turned off on modern BBS's) 3) Paid for the licences to add more lines. I think he started with 3-5 lines. Traffic increased when we started this, and so more lines were needed.
4) Added the Commodore BBS list
5) Added links to the Atari chats on both atarinews and the IRC chat.
6) Added the ability to skip all log-in screens. (this added with 300 baud users in mind).

Hi,

You may be interested by the Breakout Game stunning story.

"
History and development

Breakout, a discrete logic (non-microprocessor) game, was conceptualized by Nolan Bushnell and Steve Bristow, after the latter had "rejoined" Atari after the merge of Atari subsidiary Kee Games.

They had an idea to turn Pong into a single player game, where the player would use a ball to deplete a wall of bricks without missing the ball on its rebound. Bushnell was certain the game would be popular, and the two partnered to produce a concept. Al Alcorn was assigned as the project manager, and began development with Cyan Engineering in 1975. The same year, Alcorn assigned Steve Jobs to design a prototype. Jobs was offered USD$750, with an extra $100 each time a chip was eliminated from the prospected design. Jobs promised to complete a prototype within four days.
"

... continued at <http://en.wikipedia.org/wiki/Breakout>

I first typed it (hex code) with my fingers on a Sinclair ZX in 1981.

ATARIstically yours =)

I almost owned one of these arcade units in the 90s. I got a lead of a guy who had one in storage. I called the guy and talked to him for a while about it and and he said I could have it for $50 and it was working too in decent shape! I set up an appointment to get it a week or so later. I show up and the guy says he threw it out as it was taking up too much room. Besides almost choking him I almost cried. Damn $50 for a working Breakout in good shape. Needless to say I never dealt with him again.

Great work! I've been using it for a couple of days now, and I'm
extremely satisfied. Really like the new options, and it seems more
stable than the previous version.

...no surprise though, since I used the v4 beta prior to this one :)

I'm not an expert on this, and I don't have enough time atm to
research this. I'd recommend you read http://dev-docs.atariforge.org/files/A=
CSI_DMA_Guide_6-28-1991.pdf
and http://www.atari-forum.com/wiki/index.php/Atari_ST/STe/MSTe/TT/F030_Hard=
ware_Register_Listing.
I think that all will be answered in these 2 docs.

Good luck,
George

P.S. If you still have questions after reading these 2, I'll try to
help you.

Yes, all 4.0-bugs that were reported to me are fixed. There are most likely a few bugs to discover though. One side-effect of the dwindling user base is that it's hard to get enough beta-testers to test new software. When I released Taskbar back in 1997, each beta was downloaded almost 1000 times the first day after it was announced. 4.10b was announced about a week ago, and it has been download 49 times...

So a big THANK YOU to the beta-testers that are still with me :-)

This is a long shot, but I can't think of anything else atm:

In mint.cnf there's a section called NEWFATFS, perhaps your partitions are not listed there?

Waow, thanks a lot!
The first document in precious, I'll try to understand it all by my self...

>P.S. If you still have questions after reading these 2, I'll try to

>help you.

...but if I miss something, I'll ask you for more.

Many thanks!

Guillaume.

Yes, You had right, toswin and other desktop like Jinnee show good
capacity. Thanks a lot

best regards
Piotrek

Which suggests that your kernel should read this file. MiNT prints a
string with some information about the .tbl-file when loading it, does
this appear on your set-up?

I'd like to buy a working, double-sided double density disk drive for
my atari ST.

If you have one for sale, let me know in this newsgroup, or send me an
email.

Thanks,

beta_zero@spiritone.com

I don't think the lack of acitivty here does reflect the number of users, what is does reflect is a move from newsgroups to web forums because people using newsgroups became annoyed at the endless flame wars and spam that you can get in newsgroups bacause the posts and users are not controlled by mederators.

Hello,

I have the Atari's "HARD DISK CONTROLLER C103561-001 REV.3".
On what machine can it be used?
What are the 3 dip switches for?

Thanks,

Guillaume.

MegaSTE or Stacy, iirc the dip switches are for ID selection.

Mark

PS if you ever want to sell it;-)

I'm 99%T sure that this is a Stacy/MSTE SCSI adapter. It will plug straight into a Stacy or MSTE, and can be used on all machines with a ACSI connector if you fabricate a cable.

> What are the 3 dip switches for?

To set the card's ACSI ID.

Be aware that there are several restrictions on this card:

- Does not have parity, so the SCSI drive must be able to work without.
- Only one SCSI unit can be connected, this must have SCSI ID 0.
- Can not access more than 1Gb.
- SCSI is not buffered, so you must use short cables and NOT terminate the SCSI drive.

Most of these limitations can be worked around by hacking the hardware, but IMO it's easier to buy a better adapter.

Thanks to both of you!

Mark: sorry but I have an Open Mste and it NEEDS that adapter.

So I put it in the machine, and I'm experiencing some problems with the floppy disk:

The HD is a 40Mb Apple (quantum), yet formated for Atari with ICD drivers on it.

- either the floppy is ok but I can't boot from the HD (then HD drivers says: no parition found, I can make a sector test, but no data access)
- either it boots from the HD but then "A: unit does not exist" from the desktop.

What's happening???

Guillaume.

I haven't used ICD drivers for 15 years or so, so I can't really help on
this. If you have four partitions or less you can try AHDI or the
demo-version of HD-driver instead of the ICD driver. If that doesn't help
try re-partitioning the drive with HDX.

    I'd like to use it with a CD-Rom + ZIP. Wich version of HD driver works
with it?

    Guillaume.

Any more or less recent version works, but you need a CD-ROM driver,
e.g. ExtenDOS pro, in order to access the CD-ROM.

Hi all,

I had originally planned to wait until this summers NAS (www.sak.nu/nas/) before releasing a
new version av AtarICQ. However, after a rather hard hitting bug was recently discovered and
fixed I instead decided to get a new release out as soon as possible.

The biggest noticeable addition to aICQ 0.172 is the ability to view GIF images as background
in the contact list. This was made possible through a cooperation with PeP, who has been kind
enough to supply a very, very nice OVL that decodes and processes the GIF data. Cheers for that!

A somewhat thorough complete list of changes:

* Implemented support for loading graphics via external load modules in form
of dedicated overlays. (Look into the preferences dialog to set this feature up properly)

* Caching of background images implemented. By default AtarICQ will use a
subdir (/cache) in its own workdirectory for storing the data. To change
this, you need to tweak the cache dir within preferences dialog.

* After loading the GFXGIF.OVL the CPU cache will now be flushed before the client
calls any functions within the OVL. Applies also to aicq.ovl!

* When put in compact mode (F10) the contact list will now use the native
sliders of the AES, including a SIZER widget.

* Clicking the CLOSER widget on contact list while holding ALT-key, will trigger aICQ
to remove the window TITLE.

* More optimised redraws of the TABs, resulting in much less flickering when
toggling between open TABs.

* Cookie jar is now read utilizing Ssystem() under MiNT. Under TOS/MagiC, the
old method is still used.

* Under large gfx resolutions the scrollback setting could easily be defaulting to a much too small value, in case the message window height was increased. A check for this is now added after reading the config file. This problem could be noticed as a very serious scrolling problem, causing aICQ to lock up pretty good.

* In case COLOR_SELECT is not specified in the environment, AtarICQ looks if COLSEL.PRG is present in its workdir. (This prg is included in the zip file as of the 0.172 release)

Find the new release on the official AtarICQ website:

http://www.ataricq.org/

Enjoy the new AtarICQ, and please share any thoughts on the new release with me either here or on the AtarICQ webforum at: http://www.atariforums.com/list.php?25

Regards,

/Joakim

Hi. I'm currently using v8.15, I believe. It works fine with my setup,
Hard drives, CD-ROMs, EZ135 removeable, etc. I think you'll still have
to have CD-ROM software, and I'd highly recommend Anoydyne Software's
ExtenDOS PRO.

Read what Uwe said though, he's da man. :)

Hi all,

I just received very sad news which definitely kills all hopes for
Jinnee in open source version. Its author send me this answer:

--

Hi,

sorry, I don't have the sources for jinnee anymore. They are lost.

Mani

--

So it seems only hope is to "wake up" Thomas Binder (Thing author) or
to make decent (not as limited as Teradesk) desktop from scratch...

Sad news, I know :-/

Personally I find TeraDesk to be an excellent desktop, but I agree that
it's a bit "visually challenged" compared to the eye-candy in Jinnee.
However, I don't think a new desktop is what we need now, there's a much
more urgent need for some decent and usefull *applications*. Personally I
miss the following apps for my Milan:

- An updated and robust emailer.
- A free word processor.
- A good personal organizer.
- Proper SMB support (printer- and filesharing with Windows and unix/Samba).

A good desktop is ofcourse essential, but we already have several that's better than what we find on most other platforms.

If anyone wants to develop a new desktop though, I suggest that it's made modular. Split it into small applications, each doing a well-defined task really well and tie it together using the AV-protocol or similar. This will make maintenance much easier, and it will also be easier to personalize and tune the desktop.

On the subject of Desktops on the Ataris,
I think we already have several good desktops that could be improved.
Geneva and NeoDesk for example would be a good place to start if the author

would not mind allowing someone to do some improvements.

There are many really good pieces of software for the ST-Falcon that could
be brought up to date and or improved upon without having to start from
nothing
to work with. If the author(s) and or owner(s) do not mind.

Hi Dave,

Of course there isn't room for most hardware under the 1040STe shielding,
for most earlier hardware. However I don't let shielding get in the way
of projects.

But I do recall that TOAD Computers use to sell a 16mhz upgrade for the
1040STE, anyone know if this was just a simple 16mhz 68000 square chip
that you just plugged in?

My 1040STE happens to have a Socketed 68000 which was a nice suprise.
Also the chip under the PowerSupply is also socketed.
I've studied the Falcons motherboard, but only recently took a good look
at the 1040STe MB.

I suppose most 1040STe's have these socketed chips, Sure makes it
easier when switching processors.

Too bad about Jinnee, even though I personally prefer Thing. Teradesk
works really well, though as Jo Even pointed out, the visuals aren't
```

exactly stunning. Neodesk is most probably a no-go, since its' functionality is too entangled with Geneva (which is very outdated by todays standards).

Exactly, Neodesk relies heavily on Geneva, and if ran on anything else, it kickstarts a module with AES-functions from Geneva. At the end of the day the author has decided not to part with any of his products - so both Geneva and Neodesk will not have their sources released.

As Jo Even and PeP already said, Teradesk seems stable and all, but it

is getting clear it will never strive to be more than a replacement
for the TOS-desktop. We have to keep on hoping someone will initiate
an open source desktop project, with the aim to produce a modern
desktop.

Regards,

/Joakim

We could have another option.....Direct desktop by Eric Reboux, i have
never used it, but in the screenshots that i saw together with MyAES
it looked very good.

I remember Zorro author of Zview trying to buy Jinee sources to make
them open source, i read he was very close. I think this happend
before the sources were lost.

Isn't a friendly fork of Teradesk the most viable solution, particularly now that it appears to be clear that both Thing (for whatever reason) and Jinnee are a dead end? As Jo Even says, it's already quite a decent desktop, even compared to the flashy propositions I see on other systems.

If I had a second body and more experience I would port Teradesk to GCC, make it FreeMiNT-only for simplicity's sake (and get rid of legacy code along the way) and implement a plug-in system so that anyone could add functionality with any language they feel more at ease with.

Unfortunately...

CAT can maybe this. It is open source. There is an newgroup "Maus.Tausch.CAT" it is normally in german, but I think is no problem if someone ask in english.

From what I remember many updates came in two versions, one for the DIL and one for the square socket. I know Marius Becroft (hope I have spelt that right) did two versions of his AT disk adapor. I the the AT Speed 286 chip also was done in a similar way. Not sure about the Toad. You need to twek the mother board to double the CPU chip speed, but keep other clocks at 8Mhz so I would expect that there are multiple mods...

I have never seen a soldered one. On the other hand the DMA chips, that
often need replacing, are soldered :-(

The task of a desktop is to provide functions.
Please leave the fancy stuff to the AES. In casu XaAES.

Personally I consider 3D buttons already despicable bloat.

I prefer Ataris as simple as possible.
Single tasking, ROM AES, as little colour as possible only a light green
background. No 3D. Books arent 3D either.
I use Teradesk because it has better functionality than
the ROM desktop. Thats all.

I worked on XaAES because I wanted something interesting to do.
When I realized that I wouldnt use it myself very much I quitted.

If I want bloat, I start up my Linux box.
I have no urge to prove anything using a 20 year old computer.

Hmmm, while writing this, My TT could run Multics. Even better,
Mulics with a GUI :-)

This is what I wanted to do in 2003 when I revived Teradesk.
I also wrote in an interview that I would encourage people who
wanted something more modern to fork Teradesk as much as would
be needed.

I still believe that the name "Teradesk" should remain being
associable with a simple and compact desktop as it is now.

If you want more, the code is GPL, feel free but call it different.
XA_desk sounds like a good idee.

Djordje, do you agree?

No, you didnt. I did.

I wanted to express my opinion in this thread.
Replying to your contribution is not meant as a
criticism to you personally. I just needed to
hang in somewhere. I should have removed your
part. Apologies.

Late in the thread... hopefully I've attributed the words to the right
poster. It would have to be more than just a chip. If the system clock is
8Mhz, that is what the processor is going to run at regardless of what it is
rated for.

That would be a good idea if someone wants to improve on the existing
desktop, but I don't think TeraDesk is a suitable starting point for a
modular desktop. I've had a look at the code, and the various potential
modules are still too entangled with each other.

If you break down the functionality of a desktop into different modules, each module becomes a very manageable project, and I think it would be best to start from scratch (or perhaps use parts of TeraDesk's code where applicable):

- Desktop: Manage desktop background. Icons on desktop. General set-up. Icon assignment, document type assignments.

- Desktop server: AV-server. Icon server. Put icons and icon assignments in shared memory so each of the components doesn't have to keep and maintain their own copies.

- File explorer: Display a window with a specified directory. Pass the user actions (copy, move, delete etc) to the AV-server.

- File info: Display and change information about a specific file or folder.

- File copy: Copy/move files, using the File info module to do any renaming if necessary.

- Search: Search for file/foldernames or contents. Search result is passed to File explorer for viewing. Possibility to save search criterias/filters, thus allowing "search folders" in File explorer.

Each of these modules would be separate applications communicating with each other through the AV-protocol. The AV-server would then act as a "hub", handing out and passing tasks to the appropriate module.

The AV-protocol is quite suitable for this kind of modularization, and since it's a well known protocol it would be possible to replace a module with an existing or new program if you want to.

The downside of the AV-protocol is the use of pointers to global (if we're lucky!) memory. This causes problems for MiNT's memory protection, not to mention what happens if the calling application crashes after the message is sent but before the called application is finished processing the string pointed to! A solution would be to replace the string pointer with a shared memory block or a pipe, falling back to the string pointer for legacy applications.

I think that this approach to a desktop has several advantages over a monolithic desktop in a multitasking environment:

- Less bloat. Separating functionality into modules allows simpler code. And stuff you never use is never loaded.

- Expandable. If the desktop server is correctly designed, the desktop environment can be expanded almost indefinitely by configuring the server and adding a new module.

- A better user experience. A lengthy search or copy-operation would never block the rest of the desktop.

- Freedom of choice. Don't like the existing File explorer? Write a new one with ftp-support or whatever.

- And for the programmer: Easier development :-)

I'm not very fond of CAT. I've only tested it briefly, but found the GUI confusing. Too many options for my taste, and too much stuff going on. In many ways it reminded me of Okami wich I used for a while.

I liked aMail, with an integrated editor and a proper address-book it would have been perfect for my needs. Unfortunately it was too buggy to be reliable.

```

I completely get Henks point of view, even though I don't share it 100%.

I'm getting quite of topic here, you'll have to excuse me.

I'm a tech writer by occupation. The typical technical reader does not want to take part of information, but rather just get on with the task at hand. Sometimes the information itself is pure crap, and I can't do much about it, and sometimes the information is adequate. A big part of the job involves changing the reader's opinion as to increase the likelihood of him/her taking part of the information. If the information was crap, at least he/she read what little there is. If the information was good, the work put into writing it wasn't in vain. I think this could apply to software as well.

What constitutes bloat? Personally I don't think 3D buttons is bloat. It's part of any GUI as to make it more obvious what is buttons and what is not. I don't consider background images bloat either, as it may have a positive psychological impact on the user (an example of this effect is the swedish WW2 command bunkers, where they ended up making fake windows with a painted scenery on the walls. They also adjusted the lighting conditions during the day to reflect that of a typical day outside. As a result, people found it a lot easier to cope with being underground.)

I think a good example bloat-less eye candy is GokMasEs great AtarICQ client. The user interface has always been pretty, yet at the same time very usable and quick. The latest version adds the possibility of having a GIF background image to the contact list (I admit having a certain bias here for certain reasons). On a low spec machine, the process of unpacking GIF images is quite extensive. To cover that situation, GokMasE added the possibility of caching the image in raw (device dependent) format. It is also possible to disable the function altogether. Personally I think that's a good example of providing "modern" candy effects, while still sustaining usability and speed on low spec machines.

Ok, enough of that hippie bullshit. It's in the dreads, you know. As a coder, I already know how things work, and hence I do prefer a fast slick interface. On my Hades however, that slick user interface can just as well be fairly pretty, since the eye candy has very little impact on the overall performance of the machine. Maybe bloat level should be judged in relation to the target system, I don't know.

And now for something completely different...

That depends on what you mean by "fancy stuff" ;-) If you talk about
background images I disagree. The desktop owns the desktop window and is
responsible for redrawing it. I don't want the AES overriding this.

If you talk about semi-transparent icons and fancy icon-titles (yes, I'm
referring to Jinnee here) then I agree. This should be the responsibility
of the AES.

I must admit that I've never heard of this desktop before. Anyone know
where I can download it? Googling for it resulted in a lot of dead links.

But Thing still has problems with long filenames and large partitions.

Hi All,

I am trying to resurrect a Falcon 030 that has been in my attic for a long time. The HD is toast (click of death). I saw somewhere how a person used a compact flash card to replace his Falcon HD. I bought an IDE --> CF adapter on Ebay and I have an old 128MB card I was using in a camera. My next step is to format & partition the card.

Another search of my attic, and the only such software I found was for my old Link (used with my even older Atari ST). It's ICD software (v6.2.4 IIRC) but works ONLY with Adaptec host controllers. It sees the CF card as "unrecognized unit" on ID #15, then it hangs.

Some online searching and I see the well-regarded HDDRIVER software, however the demo won't format. Since I am really doing all this for curiosity's sake and may not even use this Falcon (actualy it's not even

```
mine), I am wondering if there is any free/shareware options anywhere
for making this CF card work.  TIA!

I think it was provided with older versions of MyAES. You might also ask
Olivier Landemarre, MyAES's author.

Go to http://www.atari.org/services/systemdisks.php. It has almost all Atari system disks available to download, including the Falcon HDD drivers disks. This should get you started.

True, it doesn't work with any of my email providers (usually SSL is
needed)

Btw. there has recently been an inquiry by a user about a possibility
of compiling TeraDesk so that it could be burned into ROM (Flash EPROM,
to be more exact). He built a circuit containing TOS in the Flash,
there is more than enough free space above TOS at $E00000, and the
Flash can be simply reprogrammed with any update...

>Djordje, do you agree?

Yes, completely.

Regarding the simplicity- or otherwise:

An important part of my concept when I first took part in TeraDesk project was that it should remain compact and simple. Many times there arose a situation where I had to weight the benefits of adding some option against the increase of code size and memory usage, and increased complexity of use. It seems that people using more capable machines tend to forget that there is also a number of users with feebler Atari machines who find that TeraDesk, as it is now, exactly satisfies their needs. They would have no use of marvellous desktops needing X megabytes of RAM and XX megabytes of disk space. As there were already two other desktops targeted at capable machines, I think it was a good decision to provide a new one having in mind primarily the feeble and the poor :) - therefore it was clearly said, when TeraDesk 3 was released, that it was not intended as a replacement for Thing and Jinnee.

I would also like to point that the (good-natured) objections raised here against TeraDesk appear to concern the cosmetic side mostly- not the functionality. There seems to be a general agreement that TeraDesk does what it is supposed to do, reliably. And yes, I agree that the code has become tightly connected and there are some legacy segments in it, but it is all in the function of fulfilling its purpose and design concept.

Btw. some things should remain simple. I think that there are rising issues of visual appearance of GUIs, icons etc. (on any operating system) that will have to be discussed soon. How standardized should they be? How complex can a display become before it becomes umanangeable by human users, whose brains do not double their processing power every couple of years, as CPUs do?

Imagine that one is driving a fast car and comes to a traffic sign warning of a dangerous bend ahead (a simple three-colour triangular icon). Would the message be better and more quickly understood by the driver if, instead of the traffic sign, there was a magnificent truecolor photograph, in 8000x4000 resolution, of a pile of crashed cars, on which one could read evey number on license plates, recognize the members of salvage teams caught in the scene, and read the logos and advertisements on cars of media people present?

(a question: why would anyone need a truecolour desktop icon?)

Regarding the naming of names:

In order to avoid confusion, it would indeed be better to create a new name for any significantly different new fork, and leave "TeraDesk" name (btw. I never found out what was this supposed to mean) to the current fork.

About development of a new desktop:

It is all very nice, but I would like to say a few words of warning:
I joined TeraDesk project several months after Henk revived it. It took us almost a year to overhaul it significantly and create TeraDesk 3. Since then, a number of things were added, problems fixed and it took more than four years to get it to its present status (and there are still some improvements to make- a new bugfix release is due soon). I am afraid that if a new desktop project is started, by the time it reaches a really usable state there will hardly be any users left (or even left alive).
We have an example of "Direct" desktop with nice visual effects but relatively poor functionality that was abandoned soon after initial release.
We have painfully slow advances e.g. in Highwire (is it still developed at all?) and even in XaAES (when was the last relase?).

There was a general once, who said something about having good ideas today, against excellent ideas tomorrow...

regards;

Djordje

> some improvements to make- a new bugfix release is due soon). I am afraid that if a new desktop project is started, by the time it reaches a really usable state there will hardly be any users left (or even left alive).

I understand your point of view but I tend to disagree here with you. I think it's all about motivation. For example: I really missed some good GEM, clean, opensource music player. I didn't know one single thing about GEM programming. After 3 months I was able to release the first version and I really don't think it was some unusable alpha, it wass fully working one and I think it looks and behaves good and has many cool features never seen on other atari player. After that there was one bugfix release and... since then, I don't need more (meaning bugfixes, new features can be always added ;).

I want to say, desktop is clearly more complex project but not impossible to code. With my current experiences, the first version with the same (plus minus) functionality as Jinnee/Thing could be done under 6 months of intensive development. After one year well used, bugfixed one.

I think this kind of desktop will also use much much more users than TeraDesk since users want nice GUI, "useless" features, truecolor icons etc... Try to ask Falcon / TT / Aranym / Hades / Milan / CT60 users how many of them are using TeraDesk and how many of them are still using Thing/Jinnee...

Summary of this my crappy post is there's no point in discourage coders from creating new cool desktop. I really can't do this, I have so many atari projects open... this would be suicide ;)... but someone else... may be still hiding and we're going to see some surprises ;-)

Are you talking about 1.29? I've been using this for several years, and filenames > 32 characters are still ignored.

> (a question: why would anyone need a truecolour desktop icon?)

Because an icon designed in a modern graphics application with gradients, Gaussian blurs or transparency looks like crap when converted in 256 colours, let alone 16. I know that from experience. It removes much of the fun of creating new icons. Drawing pixel by pixel in Interface may be courageous, but not everyone is a masochist.

So, the user may not *need* a true colour icon, but the artist *wants* them because they make it's work easier. Now don't ask me why would anyone need gradients in an icon :-)

Greetings,

Anyone had any experience using the program Outside, vitural memory manager
with a CT2B Falcon?

I know that some programs don't work well with the FastRam of a CT2B and
want to make
sure that the Outside program is compatible before setting it up.

The CT2 use the MMU to map FastRAM, so I doubt that Outside will work.

I'm pretty sure I got it working on my CT2B. I'll have a look tonight
and see if its still installed. I have 64MB fast ram anyway, so never
use it;-) All that's required is a 030 or better iirc.

It depends on the translation tables. If the mapping is similar to the
one used by the TT TOS it might also work for the CT2.

This appears quite reasonable. I would like, however, to raise one more issue related to this division of labour. It concerns the fileselector. Generally, it is embedded in the AES or else a discrete application substituting the one in the AES. It is expected that a good fileselector has provisions for diverse formatting and displaying all kinds of file and folder names, masking or sorting them by diverse criteria, calculating total and selected sizes, scrolling file lists, possibly handling drag & drop, etc. Some selectors can also perform file operations like deleting or copying (let's ignore for the moment whether they should do so)...

Now, this functionality requires a considerable amount of code. A desktop needs all that code anyway, for the file explore/copy/info part, but fileselector is not a part of the desktop but of the AES - and an AES needs very similar code only for the sake of the fileselector- and then it is likely that its behaviour and appearance will not be identical to that in the selected desktop. This duplication seems to me to be a terrible waste of effort and memory (both in the human and the machine). It would be good if a solution were found to have the relevant processing provisions only once in the system, to be used by whatever needs them.

(generalized, a fileselector appears to be in fact a directory window, with provisions added to manually enter a filename).

This is too optimistic, IMO. Development time for a new desktop would probably be similar to what it was with previous desktops (Thing, Jinnee, TeraDesk...) and other large projects like AESes, web browsers, etc. They are all created by human beings who can only do so much in 24 hours, and who, no matter how motivated, also have a life beside coding new software. So, my estimate of development time for a good new desktop is at least a couple of years.

>Summary of this my crappy post is there's no point in discourage
>coders from creating new cool desktop.

I did not want to discourage anyone. On the contrary, I want to encourage anyone to produce something better, but I am trying to be realistic. Myself, I would like to see a new open-source deskop appearing, if only to compare design approaches with what I am doing. I will probably still be around a couple of years from now. And if it happens that such a new desktop suits my needs better then TeraDesk, I would be willing to switch.

>I really can't do this,
>[...]
>but someone else...

This is an illustration of the problem. We all see that things can be better, but we also have other projects, other interests, other obligations... If only someone else could produce in a flash what we imagine...

E.g. I would really like to rewrite large parts of TeraDesk- some legacy routines are so entangled that it is difficult to comprehend all that is happening inside them, and why they were designed that way and not differently. I would also like to adjust the code so that it is "compilable" both in PureC and GCC. The idea of modularity is also a very interesting one. But I probably can not afford so much time and effort.

>I think this kind of desktop will also use much much more users than
>TeraDesk since users want nice GUI, "useless" features, truecolor
>icons etc... Try to ask Falcon / TT / Aranym / Hades / Milan / CT60
>users how many of them are using TeraDesk and how many of them are
>still using Thing/Jinnee...

Yes, I suppose that a majority of such users are using Thing or Jinnee, but most probably a majority of users working on low-end Atari machines are -not- really using those desktops. Now, we are all striving to keep alive and usable a 20-year old computer family, let's say as a part of the technical and cultural heritage of the informatic society (and also because it is fun). In that context, a usable 520 ST is as important as a Falcon or a Milan. They need not run same software, but they should all run good software.

Be sure that I do not encourage anyone to switch to TeraDesk from Jinnee or Thing. Those are nice desktops (Thing appears somewhat limited and chaotic to me, though), and whoever finds them suitable should continue using them.

Hi,

I have compiled and build GEM interface to Links, you need a fast atari
020-060 with FPU with/without graphic card, under MiNT.

My archive is here (binay and sources):

http://didier.mequignon.free.fr/files/links-2.1pre33.m68kmint.tgz

More infos about Links here :

http://links.twibright.com/

Good tests !

Regards,

Didier.

Nice! I tested it briefly under ARAnyM just to confirm that it works. I'm
looking forward to test it on my Milan later.

Hi Didier!

DM>I have compiled and build GEM interface to Links, you need a fast
DM>atari 020-060 with FPU with/without graphic card, under MiNT.

Okay, testet it on my CT2A-F030 running quite recent FreeMiNT and
N.AES 2. Works, but very slow and often gives an alert "connection
will block" or the like, even on sources from the local network.

Under MagiC, it will just issue an "68000 exception, error #-69" and
quit.

With best regards
Ekkehard

Try to increase "Retries", inside the network configuration box.
I had also sometimes this problems under MiNT Net, and never with a server on my Mac. I have fix it with Retries at 10, after some hours of try to debug network access. Maybe this problem arrives because I have hacked the select() function and replace with a loop by step of 10 mS timeout with evnt_multi (for GEM events) and 10 mS for select (for network events). Another method was to create a true thread just for GEM events but it's another story.

> Under MagiC, it will just issue an "68000 exception, error #-69" and

I'haven't tried to test it under MagiC, because this program is build for the Unix world, I'am already happy that is't OK under MiNT/GEM.

Regards,

Didier.

Hi Didier!

DM>Try to increase "Retries", inside the network configuration box.

Tried that. Accepts a max. of 16 or so, but that didn't help much.

Doing so I encoutered other problems: Sometimes it would hang the
system immediately after start. Mouse still moving, clock ticking,
but no response at all to mouseclicks. ctrl-alt-del issues an
immediate cold boot.

And then there have been several occurences of "illegal AES call
21827". And I wasn't able to get to remote servers at all, possibly
a resolve issue.

DM>Maybe this problem arrives because I have hacked the select() function
DM>and replace with a loop by step of 10 mS timeout with evnt_multi (for
DM>GEM events) and 10 mS for select (for network events).

So any network evemt during the GEM slot might get lost? Doesn't
sound very stable to me :-(

DM>I'haven't tried to test it under MagiC, because this program is build
DM>for the Unix world, I'am already happy that is't OK under MiNT/GEM.

Okay, but I've got to reboot into MiNT every time to test it, as
MagiC is my main system. And faster, too.

It would be good to get it going, even under MiNT, though, as some
equipment in my LAN requires active JavaSript for configuration. I
could use the WinXP Notebook, but the Ataris are still my main
machines :-)

With best regards
Ekkehard

If you want to run unix or mint stuff, you'll need mint. It's as
simple as that.

Thanks a lot Peter :-)

4 week-ends of work.
Sure the menus and interface are from the Lynx world, but I cannot
rewrite the program. Now I wait the CTPCI for use it in 16M colors.

Didier.

I use just some basic AES calls, and colors ICONs on the buttons bar if
ilinks.rsc is found. Else the stack is set to 128 KB normally is enough.

??? No It's the system (here MiNT who handle frames), programs use
socket, select() just tell to the program than message is received (or
send) else there are a timeout (here 10 mS).

I don't know the level compatibility between MagiC and the mintlib, for
exemple with select().

Regards,

Didier.

Under MagIC I can use the interface, enter an url lock the program (not
the system) => no error 69 for me.
The GEM button not totally replace the space of the Lynx buttons because
the border of the MagiC 3D buttons is not the same.
I have also tried file:///d/mysite/index.html but if think MagiC know
only DOS path format, file is not found.

Like Peter said, it's a program for the Unix world.
In 256 colors, the packed to planes conversion slow down the system, so
it's better to use a graphic card or 65K colors.

Didier.

Hi Peter!

P>If you want to run unix or mint stuff, you'll need mint. It's as simple
P>as that.

Not neccesarily. MagiC-Net is quite compatible with MiNT-Net, so
console apps like wget will work just fine. MagiC is lacking some
calls and stuff, true, but most of these the MiNT-Lib should take
care of, mapping them to what's available.

With best regards
Ekkehard

Hi Didier!

DM>Under MagIC I can use the interface, enter an url lock the
DM>program (not the system) => no error 69 for me.

Strange. See my other post with the Manitor trace.

DM>I have also tried file:///d/mysite/index.html but if think MagiC know
DM>only DOS path format, file is not found.

Normally, MiNT-Lib should be able to take care of this. I've had
trouble with this earlier, TAR creating files named '/foo/bar'
instead file 'bar' inside folder 'foo/', but that's been awhile.

DM>In 256 colors, the packed to planes conversion slow down the system,
DM>so it's better to use a graphic card or 65K colors.

I'll try it on my Milan next week, then.

With best regards
Ekkehard

Hi Didier!

DM>I use just some basic AES calls, and colors ICONs on the buttons bar
DM>if ilinks.rsc is found. Else the stack is set to 128 KB normally is
DM>enough.

Sounds not that bad, then. I've tried it with Manitor running, and
it comes as far as this:

```
Program start:
1600: [links.prg]                 Mshrink(zero =3D 0, buf =3D 23130848,=

A RPM package with joe for SpareMiNT already was available on the
sparemint site.

Other editors that are available for SpareMiNT: vi/vim, pico (as part of
the pine package), nano, microemacs, nedit ...

Yes, there is _but_ a very very old one. This one is the latest official release.

bye
Bernd

Hi, I'm Ben here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,

because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

With a define DOS_FS, now it's OK I can load the local copy of my site.
Wonderfull. About buttons, there are a way for get 3D button size, so
the problem can be fixed.

> Normally, MiNT-Lib should be able to take care of this. I've had

Maybe we get problems under MagiC because I use the latest MiNTLIB since
I need the SSL library for Links.
What means "fk" under MagiC, fork ? When the program is locked, when
press un URL (other than file:// ;-)), with CTRL-ALT-ESC I see also a
copy of links without name (2 x 9.4MB humm...), like my CPX CT60CONF who
use a MagiC thread (shel_write).
It's strange because there are always one process under MiNT.

Hi Didier!

DM>With a define DOS_FS, now it's OK I can load the local copy of my
DM>site. Wonderfull.

Indeed :-)

DM>About buttons, there are a way for get 3D button size, so the problem
DM>can be fixed.

That's cosmetics anyway, isn't it?

DM>When the program is locked, when press un URL (other than file://
DM>;-)), with CTRL-ALT-ESC I see also a copy of links without name (2 x
DM>9.4MB humm...),

This will be no problem on my Milan, as that one has got 128MB of RAM. Even here on the Falcon, 2 times 9.4MB should fit easily:

```
ST-RAM:
=======
MemAvail: 11677744
MaxAvail: 11661090

TT-RAM:

But that's one of the reasons for me preferring MagiC: That CTRL-ALT-ESC task manager, which is almost always available. With N.AES or XaAES, the graphical interface may be blocked (perhaps some deadlock), and I can't selectively kill the offending process because the mouse won't do anything apart from moving the pointer around...

With best regards
Ekkehard

Since I've never used MagiC I may be wrong but what you describe can be
achieved with XaAES. I've been able to kill off frozen apps even when I
thought the system had crashed.

Indeed. CTRL+ALT+L will bring up the task manager in XaAES even if the
crashed/frozen app locks the screen manager.

That might be true, but I have seen a lot of times the task manager
being inactive because a program has stolen window foucs, so you can't
actually click anything on it (task manager)

Hello,

Did people that belong to the list of those about to get their ethernats
since the beginning or march receive them already ?
Or do I have to bother about it ?

Regards,

J.-Luc

Hi Ekkehard,

I's not a memory problem, fork was used for dns, there are also a flag
for not use it NO_ASYNC_LOOKUP. I have also put others flags DISABLE_SMB
and NO_FORK_ON_EXIT for same reason. It's a great program, all is
possible, I have also tried with HAVE_PTHREAD but with the phthread
library, it's OK under MiNT but under MagiC the program is locked when
the window is open.
Now without fork the interface works, but I get "socket exception" when
I use an URL, I have never used MAGXNET, but I think, it seems work,
because I see socket dev and eth0. Ping also works.
No cool, for the MagiC binary...

Oh, and I use objc_sysvar for get the 3D button infos ;-)

Regards,

Didier.

Don't expect every network applications written for the BSD sockets to
run out of the box under MagiC. As far as I understand, there has been
changes in the MiNT network API and MagiCnet hasn't seen an update for
7 years. There you have it.

I've just given it a quick test on the Milan60 in 64k colours. It's
a bit slow, mainly the images, and has some of the layout problems that
Highwire has.

Now if someone could add background images and the long awaited Javascript
to Highwire....

Peter

I copied the british.tbl to the folder C:\MINT\1-16-CUR\ and renamed it
KEYBOATD.TBL

I've done this before but it had no effect on the keyboard layout.

I then edited it to re-arrange the 2 keys that are wrong # and `
Saved it and rebooted but it made no difference.

I don't think this is a problem with keyedit.

In the case, I guess you've installed another utility that overrides
the freeMiNT keyboard mapping. This was the case when I was using
the keyboard mapping utility included in Clocky. Clocky mapping required
to be disabled so that MiNT "keyboard.tbl" was effective.

You may be using other keyboard utilities such as Clocky, CKBD etc. that
makes freeMiNT keyboard mapping uneffective.

I hope it helps,

Regards,

I still haven't worked out why the list of available resolutions is
greater than the number of modelines that I have.

Has anyone else got the ATI Rage driver and do you see the same
thing ?

Peter

Hi there,

P Slegg schrieb:
> Can you put this rpm onto the Sparemint site ?

All i can do is to ask Frank Naumann (its his site) to do this but i'm going to work in another city for a few weeks. It would be nice if you, or someone else, could ask him.

Bye
Bernd

Do you have a list of active CPX's?

```
> 103  094   0     0  Sleep    253952 00:08.69  mltistrp
```

What?? No Taskbar?? ;-)

Btw make sure that you're putting keyboard.tbl in the actual sysdir. Try a "more /kern/sysdir" and check that you're using the correct one.

Open the floppy folder and drag the file over the hard drive icon and drop.
You can select more than one. If you want the files in a certain folder on
the HDD, make sure the HDD folder in open to where you want the file and
drag it from the floppy. Works pretty much like Windows.

Another beta of Taskbar is available on http://atari.nvg.org/Taskbar/. Some new features and a lot of work done cleaning up and refactoring the code.

Greetings everyone!

Here are the lucky and the proud winner(s) of the March prize(s)
at The DarkForce! BBS:

March 2008
1. ST Magazine - Tobiasj wins the free 3 mag. subscription

Congratulations to our winner(s)!

Also, here is Februarys prize:

April 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

:)

Thanks I will ask Frank if he hasn't seen this all ready. I didn't want to
ask him without your permission.

Peter

Hi Peter!

PS>I still haven't worked out why the list of available resolutions is
PS>greater than the number of modelines that I have.
PS>
PS>Has anyone else got the ATI Rage driver and do you see the same thin=
g ?

My MVDI.CNF hasn't changed since december 12th, 2003. Is it so long I have this 17" LCD? Anyway...

I've got 15 modelines and a 16th in "Defaultmodus" section. The boot menu presents a total of 24 modes.

```
[Modelines] (only the names)
# Spezielle Definierte Aufl=F6sungen f=FCr den Treiber
# Die Standard Aufl=F6sungen k=F6nnen hiermit auch =FCberladen werden
#Modus: "640*480*2"
#Modus: "640*480*256"
#Modus: "640*480*64k"
#Modus: "640*480*16M"
#Modus: "856*608*2"
#Modus: "800*608*256
#Modus: "800*608*64k"
#Modus: "800*608*16M"
#Modus: "1024*768*2"
#Modus: "1024*768*256"
#Modus: "1024*768*64k"

Ah, but those are commented out! The german comment says there are standard resolutions, which may be overwritten using the modelines. So there are some hard-coded resolutions in the driver. Those are:

```
00 ST-High
01 640*400*256
   640*400*32k
```

```
02 640*400*64k
03 640*400*16M
04 640*480*1
05 640*480*256
   640*480*32k
06 640*480*64k
07 640*480*16M
08 800*608*1
09 800*608*256
   800*608*32k
10 800*608*64k
11 800*608*16M
12 1024*768*1
13 1024*768*256
   1024*768*32k
14 1024*768*64k
15 1024*768*16M
16 1152*864*1
17 1152*864*256
   1152*864*32k
18 1152*864*64k
19 1152*864*16M
   1280*960*1
20 1280*960*256
   1280*960*32k
21 1280*960*64k
   1280*960*16M
   1280*1024*1
22 1280*1024*256
   1280*1024*32k
23 1280*1024*64k
   1280*1024*16M
   1496*1120*1
   1496*1120*256
   1496*1120*32k
   1496*1120*64k
   1496*1120*16M
   1600*1200*1
   1600*1200*256
   1600*1200*32k
   1600*1200*64k
   1600*1200*16M
   1920*1440*1
   1920*1440*256
   1920*1440*32k
   1920*1440*64k
   1920*1440*16M
```

Line numbers 00 through 23 indicate the modes visible in my boot menu.

With best regards

Ekkehard

I think the easiest would be to format a new disk on the PC, as mentioned elsewhere, and then use the Atari to copy the files to the new disk. I think you have to copy one file at a time because a full atari disk to disk copy will overwrite the bits required by the PC, and the PC won't read it after that.

However, as alternative I recall that you can read the disks on a PC by using linux.

You can get various very small distributions of linux (i.e. 3-4 diskettes only) that install and run "on top of" DOS/Windows using the existing dos file system. Unzip the linux distro into a directory, run linux-start.bat (or whatever it's called), and it boots into linux using your dos/windows file system. Now mount the atari diskette and copy the contents into a directory. Now reboot and you're back to dos/windows, and the atari files will be there on your hard disk where you put them.

In the past I have used "mini-linux", but that was long long ago. There are much more up to date distros of linux designed to be started from dos/windows. You would need to google for them yourself, I don't know what they are.

... unless you take into account that mintnet and freemint has been under development for the past 7 years. The incompatibilities are quite extensive, and not everything can be solved in mintlib. Point was only that if a coder says it's intended for mint, people generally have to accept that, unless they're willing to send free legal copies of MagiC to the coder in question.

That's excellent!
I see that the current version is 8.2, so I'm several years behind ;-)
I'll contact Uwe about upgrading.
Thanks for your suggestions!

Hi Djordje,

Thanks much for the work on TeraDesk !

We're having great, thanks =3D)

miniPack <http://eureka.atari.org/MacAranym.zip> was updated with v3.95

The minimal package is supported according to the following machine/OS

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
```

`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

Macintosh-PC-PlayStation3 are supported with both Mac OS X and Linux.

What is noticeably changing with this new v3.95 of TeraDesk is
`shutdown` now working correctly. The ARAnyM session is now shutting
down leaving TeraDesk and XaAES cleanly. That's good work indeed.

You may comment, if you're owning one of these configurations, please ?

ATARIstically yours =3D)

Good idea.
I've taken a photo which can be viewed here:
http://img247.imageshack.us/img247/6651/link97eg7.jpg

There are actually two loose wires.
A thick black wire which I believe should connect to the "frame" of
the D-sub connector (I see there's a blob of solder there).
Then there's a thin black wire which I'm guessing goes to the unused
solder blob to the left of the red wire.
This seems to make sense, but I'm not taking anything for granted, so
it would be nice if someone could confirm this.

The length of the black wire would indicate that it is to be connected
to the frame, as you say. Not so sure about that thinner one.

If no-one can confirm these connections, you could try offering the
wires up to where you think they should go. They may have a "set", so
will look right if in position IYSWIM.

I'm puzzled as to why these wires are disconnected, as I would guess
that both have the same purpose (due to the common colour), ground.

The thick black wire should indeed be connected to the connector shield/ground, and is loose because the solder joint is bad ("cold"). The thin black wire looks like it should be connected to the solder pad to the left of the grey wire - that pad still has a piece of broken wire soldered to it and I would not be surprised if the end of the thin black wire is broken as well (not clear from the picture).

That's what I thought as well, but wasn't 100% sure if there was
another connection point on the PCB.
Anyway I connected it like you suggested and it works fine.

I actually have 3 SCSI host adapters which I've tried out with the
PCMCIA card-reader, HDdriver 6.13 and a MegaSTe. When testing I've
only had one SCSI device connected externally (which means it should
be terminated). The Compact Flash card has been partitions to TOS
standards and I've chosen "1 partition" for "Removable media" (in the
"Options" section of HDDRUTIL).

- ICD Link II
- HDdriver 6.13

Works fine ONLY when the card reader is NOT terminated.
If terminated the device isn't recognized when I boot the computer, now when I run IDCHECK.APP.

- GEsoft host adapter (not sure which model this is)
- HDdriver 6.13

Works fine with or without termination.
The memory card is recognized when booting and also when running IDCHECK.APP.

- WB systemtechnik Link 97
- HDdriver 6.13

Same as with the GEsoft host adapter: works fine with or without termination and the memory card is recognized when booting as well as when running IDCHECK.APP.

Next I tried partitioning the memory card to "DOS" (when pressing the "Compatibility" button under the partition option of HDDRUTIL.APP.
Upon rebooting the computer the computer seemed to freezed when "HDdriver 6.13" was displayed. By switching off the card-reader it moved on and completed the booting. This was with the Link 97, but I suppose the result would be no different with the two other host adapters.

I switched on the card-reader after the computer was done booting, then ran HDRUTIL.APP, hoping I would be able to repartition the memory card to TOS standards (seeing that its DOS standard apparently caused the problems), but the memory card wasn't available in the available devices of the partition menu.
So I ran IDCHECK.APP and it was available there, strangely.
NEWMEDIA.TOS wouldn't solve the problem either. Finally I ran HDDRIVER.PRG which recognized the internal MegaSTe hard drive right away and seemed to get stuck after that (just like when I booted the computer), but after 3 or 4 seconds the memory card was recognized and I was returned to the desktop.
This time, when running HDRUTIL.APP I was able to partition the memory card, so I chose "TOS, standard" again, rebooted the computer... however this didn't help either.
So what do I do now? Apparently the DOS formatting messed things up.

Hold on!!
While writing this the MegaSTe "unfroze" in the boot process (it probably took about a minute of waiting) and the bootup message showed both the internal MegaSTe hard drive and the memory card. So after that I ran HDDRUTIL.APP and formatted the drive to the "TOS, standard" format, rebooted and it worked fine again. I'm puzzled!!!

Probably a limitation with the Link II, perhaps in combination with your choice of cable. Also, how is the card reader terminated? I'm not sure if the Link II provides termination power (my old ICD Link did not), so you might need to feed the card reader with termination power from another source if you want to use the Link II.

> - WB systemtechnik Link 97

IIRC the Link 97 is regarded as one of the best (if not *the* best) ACSI<->SCSI adapters around, so you might want to use this one.

I suggest you download and try the demo version of HD Driver. 6.13 is
pretty old. I had lots of problems with CF-cards on my Milan until I
upgraded HD-Driver to 8.13 (had 7.x before that).

Strange. I'm using the standard cable that came with it.

> Also, how is the card reader terminated?

The device has a termination switch (on/off) on its side.

The red LED lights up, so this should indicate that it gets its power.

Yes, this is the one I'm going to keep. I bought the other two
earlier.
Anywhere I can get a full overview of their specifications?

The demo won't help solve my issues as far as I know because it won't
let me partition. But perhaps I could try to see if there's any
difference by just installing the new driver.
What really puzzles me at this stage is why using the DOS partition
scheme makes the memory card unreadable. And I'm talking about the
MegaSTe. Why would Uwe add a partition option that doesn't work?
There's got to be another problem I haven't looked at yet.

Don't give it up yet, it will probably just require someone who is
very good at soldering (not necessarily Atari expert) to undo your
'mess'.

If you can't be bothered put it for sale in an atari forum and state
the above, someone will definietly give you money for it.

From your description I'm quite sure that this can be repaired. Do you
have a digital camera? A close-up of your mess would be helpful. Don't
sell it yet :-)

I said "perhaps" ;-)

> The device has a termination switch (on/off) on its side.

I'm pretty sure this is related to termination power. The ICD Link needs termination power enabled on the SCSI bus in order to work - there could be some issues with this on the card reader. But as the other SCSI adapters work fine I would not bother with the Link.

> The demo won't help solve my issues as far as I know because it won't

I'd recommend that. You won't be able to test the TOS+DOS partitioning (I used that format years ago before I got ethernet adapters for my Falcon and TT and swapped files with my PC using Zip drives. Worked perfectly!) but the new driver could perhaps solve some of your problems.

> What really puzzles me at this stage is why using the DOS partition

Is it unreadable on a PC as well?

I know ;-)
I don't think it's the cable, but the adapter is indeed acting
strange. It always works with termination off, but never when it's
on.

> > The device has a termination switch (on/off) on its side.

> adapters work fine I would not bother with the Link.

I agree, but I always try to learn from problems like this :-)
The card reader uses a 25 pin connector, so to connect it to the 50
pin male SCSI host adapter I've used a couple of adapter connectors as
seen here: http://img237.imageshack.us/img237/7859/cf2jx8.jpg

What you see (from the left) is:

- Minolta CD-10 PCMCIA card-reader (25 pin female D-sub)
- 25 pin male to 50 pin female adapter
- 50 pin male to 50 pin female gender changer
- ICD Link II SCSI host adapter

The other end of the cable from the ICD Link II goes to the Mega STe
external DMA port of course.

Here's a photo of the card-reader itself: http://img145.imageshack.us/img145/4881/cf1sa2.jpg
There's a power on/off switch on the right side and a termination on/off switch on the left hand side.
ID selection is by a rotary switch underneath the device.

>
> Is it unreadable on a PC as well?

I haven't tried it on a PC, but on the Mac it's unreadable and I'm
asked if I want to initialize the card.
I've just bought the HDdriver upgrade, so I now have version 8.21.
This time it all works like it should. I've chosen the TOS+DOS
compatibility partition mode, and I'm able to use the same card with
both my Mega STe and my Mac :-)
All without having to turn off the Mega STe (if I double-click the
drive icon on the TOS desktop nothing happens if the card isn't
available, but opens a window with its contents if the card is
inserted). Both computers can read/write/delete files without any
problems, so this is an excellent solution when transferring large
amounts of files quickly (e.g. backing up the Atari hard drive on to
the Mac) -it sure beats using floppy disks!
I haven't tried my 1GB memory card with the new HDdriver -I suppose I
have to split it into several partitions to make it readable on the
Mega STe.

One limitation of the TOS/DOS compatibility is that I can't make the
memory card bootable on the Mega STe. But that's really no problem -at
least not for me. The plan is to use this memory card reader for

exchanging data between the two computers. For the Atari hard drive my plan is to install some sort of IDE interface and use a Compact Flash memory card (permanently attached) or a 2.5" IDE hard drive. It will of course be bootable as it doesn't need to be DOS compatible.
This will be inserted in an STe, but unfortunately as we're painfully aware of there's no IDE interface available which fits into the STe. Mario's interface is long gone, so is the IDEal and others. PLCC to DIL adapter boards are even harder to come across, so I won't be able to use an ST compatible IDE interface (such as the one from C't magazine). There's been some talk of new IDE interfaces coming out, but so we haven't seen anything concrete, and I can't wait forever.

The only readily available solution as far as I can see is to use an Acard AEC-7720U (http://www.acard.com/english/fb01-product.jsp?idno_no=23&prod_no=AEC-7720U&type1_title=SCSIDE%20Bridge&type1_idno=2) which is an SCSI to IDE adapter board, but I'm not sure how well such an interface will work compared to a dedicated Atari IDE interface...
But I digress.

Back to the HDdriver/memory card reader issues: I'm still wondering why termination has to be off when using the ICD Link II and why DOS partitioning under HDdriver 6.13 won't make the memory card readable under TOS nor DOS.

A big hand to Uwe Seimet :-) I have a double IDE<->CF adapter in my Milan and use one of the cards for exchanging files with my laptop. Works flawlessly and allows me to share my dev-partition between the Milan and Aranym on the laptop without having to syncronise any files.

> I haven't tried my 1GB memory card with the new HDdriver -I suppose I have to split it into several partitions to make it readable on the Mega STe.

IIRC TOS 2 supports 512Mb partitions. Unfortunately the TOS+DOS partition scheme only works with one partition (atleast it did back in the day when I used this on Zip drives) so you're limited to 512Mb.

> Mario's interface is long gone, so is the IDEal and others. PLCC to DIL adapter boards are even harder to come across, so I won't be able to use an ST compatible IDE interface (such as the one from C't

You can solder a ST compatible IDE interface directly to the STE motherboard. Lots of work though...

> The only readily available solution as far as I can see is to use an Acard AEC-7720U (http://www.acard.com/english/fb01-product.jsp?idno_no=23&prod_no=AEC-7720U&type1_title=SCSIDE%20Bridge&type1_idno=2) which is an SCSI to IDE adapter board, but I'm not sure how well such an interface will work compared to a dedicated Atari IDE interface...

Why not get another SCSI card reader? You already have everything else.

> Back to the HDdriver/memory card reader issues: I'm still wondering why termination has to be off when using the ICD Link II and why DOS

If it works, why bother?

> partitioning under HDdriver 6.13 won't make the memory card readable under TOS nor DOS.

You don't know that, do you? You've tried the card on a Mac, not a computer running DOS. And since the TOS+DOS partitioning is working, no need to waste time on this :-)

Yes, a big thanks to Uwe for his continued support!
```

I'm not familiar with the Milan's architecture -does it have a built
in IDE interface, or are you using an SCSI to IDE interface?
From what I've been told you need to switch off the Atari before
removing a memory card via an IDE interface. Is this your experience
as well?

I believe you're right, but I can live with that.
A small price to pay to be able to transfer this much data at once.
Even my Atari SCSI hard drive is only 520 Mbytes :-)
It's nice to skip using floppy disk drives!

I'm not too fond of "quick & dirty" solutions like that (though the
"quick" part can be debated with so many connections).
Now, a PLCC to DIL adapter would solve it, but like I said these are
extremely rare.
Perhaps, provided one finds the right sockets, an adapter board can be
made by myself.

> > The only readily available solution as far as I can see is to use an

> Why not get another SCSI card reader? You already have everything else.

The card reader I have is quite rare, and usually very expensive. I
was lucky to get my hands on one.
SCSI card readers actually seem to be in demand at the moment. Owners
of Akai samplers use them, and if you follow eBay auctions you can see
that they go for ridiculously high sums of money.

> > Back to the HDdriver/memory card reader issues: I'm still wondering
> > why termination has to be off when using the ICD Link II and why DOS
>
> If it works, why bother?

Here's a funny thing.
I discovered that I had inserted an unnecessary gender changer in the chain of connectors. I really only needed the 25 to 50 pin connector which I inserted the ICD Link II into. After removing the 50 pin gender changer it worked with termination on or off!
I need to do some further testing to see if it has to do with other things, but it certainly seems as though the gender changer made a difference.

Well, the Mac should be able to read DOS formatted devices, but you're right -I haven't tried it with a "real" PC, so the results may be different there. But what's even stranger is that the memory card isn't readable on the Atari ST itself, even though HDdriver has been used to partition it.

All in all the memory card I've bought is a success story and comes highly recommended as a modern cross-platform removable storage solution.

No, do not change or set any track/head/cylinder settings. This is only
needed for very old SCSI
controllers.

> Also, in the main section of the "partition" window, should I enter
> anything where it says "Type" (___) next to each partition size?

No, let HDDRUTIL decide the right type automatically.

I think I missed it before, but you are running HDDRIVER 6.x? I strongly recommend using a current version, since there were numerous changes related to DOS compatibility and CF cards. HDDRIVER 8.x is almost a complete rewrite compared with 6.x.

No problem.
I believe I've solved both problems.

1) ICD Link II needing termination to be switched off:
I must have been half asleep when connecting the card reader to the
Mega STe as I used a Centronics gender-changer connector which I
really didn't need. All I needed was a 25 pin male D-sub to 50 pin

female Centronics adapter which I plugged the ICD Link II into.
Well, for some reason the card reader was recognized even with
termination switched on after removing the gender changer!
I should really check with a multimeter, but I can't see why it would
have made any difference because of this extension, but it did.
Perhaps one of the pins is malfunctioning.
I suppose this means that the Minolta CD-10 PCMCIA card reader doesn't
need initiator identification or the more modern features of the Link
97 to work.
Does anyone here know what the differences are between the various
SCSI host adapters for the Atari ST?

2) Upgrading to the latest version of HDdriver (8.21) made it possible
to partition the memory card to TOS/DOS making it fully compatible
both on the Mega STe and the Mac. Perfect!!!

So everything is working like I was hoping. The 512 MB limit with only
one partition is no problem -it's plenty of room in the Atari ST
world.

But I'm still wondering why the "DOS" partition option in HDdriver
6.13 made the memory card unreadable both on my Mac and even stranger:
with the Mega STe as well!? I didn't change the track/cylinder
information. It was set by default to 32 tracks and 64 heads.

Finally: I've heard that memory cards have a certain write-lifespan.
What happens when that lifespan is reached? Will it stop working and
I'll loose all my data on it, or will it just refuse to write any more
data (giving me write errors instead) while still letting me *read*
any existing data on it?

SixteenThirtytwo <sixteen_thirtytwo@yahoo.com> wrote:

> I'm not familiar with the Milan's architecture -does it have a built in IDE interface, or are you using an SCSI to IDE interface?

The Milan has two IDE ports. It's also possible to use a PCI SCSI card. I only have IDE in my Milan. I have a SCSI card but I removed it as it doesn't work when I run my Milan at 30/60MHz.

> From what I've been told you need to switch off the Atari before removing a memory card via an IDE interface. Is this your experience as well?

My CF adapters are very cheap and simple, bought them for less than one pound each on eBay. They don't support hot-swap, but adapters with hot-swap support exists if you want to pay a little bit more than a pound ;-) E.g. http://www.euric.com/products/product.php?product_id=850

For my use I don't need hot-swap. I have one 512Mb card permanently installed, this one I boot from. Then I have another 512Mb card where I store all my documents, configuration files, sources etc. This card I swap between the Milan and my laptop running ARAnyM. When I'm at home I use my Milan, and when I'm traveling I just take the CF card with me and I can continue my work using ARAnyM.

My Milan is connected to my LAN so I don't need to swap cards to exchange data. If I needed that I would have bought the more costly adapters.

> > You can solder a ST compatible IDE interface directly to the STE motherboard. Lots of work though...

> I'm not too fond of "quick & dirty" solutions like that (though the "quick" part can be debated with so many connections).

The "dirty" part as well ;-) I find a soldered connection more reliable than the makeshift PLCC connector used in these interfaces.

> right -I haven't tried it with a "real" PC, so the results may be different there. But what's even stranger is that the memory card isn't readable on the Atari ST itself, even though HDdriver has been used to partition it.

Have you tried partitioning it as a DOS-partition with the latest version of HD Driver?

A good quality Compact Flash card will withstand atleast 100,000
write/erase-cycles, and many will use a technique called wear levelling
to "spread the load" across sectors. Whether this is a problem or not
depends on your use. If you're in doubt you should replace the card at
regular intervals, they're so cheap now anyway. Also, you could enable
write verification in HD Driver.

Cool! I didn't know it was possible to hot-swap with IDE, but

apparently it is (or rather, the ability to hot-swap or not seems to
lie with the type of card-readers used, not the IDE protocol.
Good to know, though I probably don't need to do that now that I have
my SCSI card reader working.
For IDE I don't need to have anything removable.

That's true. I was more thinking about a "rats nest" of wires here and
there. Typical "home made" sort of thing.
I want it to look professionally done. Clean, tidy and working.

> Have you tried partitioning it as a DOS-partition with the latest version
> of HD Driver?

Yes, it works perfectly now! :-)
No problem reading the memory card on my Mega STe nor my Mac.
I even have a custom icon and a name for the memory card when it
appears on the Mac desktop. Very cool!

The only *minor* cosmetic inconvenience of the icon is that a file
named "VOLUME~1.ICN" which musn't be deleted (it's invisible on the
Mac side though).
There's also a Mac specific folder which shows up on the Atari side as
"TRASHE~1", again invisible on the Mac, but it'll be recreated on the
Mac if deleted on the Atari ST, so no worries.
The Mac actually creates a bunch of "invisible" files (invisible on
the Mac that is) which is a total mess on the Atari ST or PCs (every
folder contains additional files with strange names -some of them
which can't be copied because of illegal characters).
They contain information about the display mode, icon size etc. for
the Mac platform, but by ejecting/unmounting the card through a free
program called "Clean up non Mac disks" (on the Mac) these additional
files won't be created.

I have it listed here already (seeling the parts).  Not much interest
in a broken Falcon, it seems...

Well, it's going to need a new DMA chip. I removed the damaged one completely from the board.

The Nemesis and associated buffer board has also been removed.

I am attempting to sell off the parts. There has been some interest, but nothing has been sold just yet. And if someone wants the whole thing in it's current condition, I'm still open to offers...

>down leaving TeraDesk and XaAES cleanly. That's good work indeed.

On the matter of shutdown I would like to comment that TeraDesk can power-down CT60 on its own in single-TOS (and probably in Magic), but uses power-down code of Mint whenever Mint is running , e.g. in Aranym. Unfortunately TeraDesk can not shut down (terminate) Aranym when it is running single-TOS: Aranym uses a rather complicated and ilogical shutdown method (IMO the development concept of Aranym and Mint has gone astray in some aspects) and too much additional code would have to be linked into TeraDesk in order to perform a self-contained termination of Aranym.

That could be overcome if someone wrote an external program that does
that, and that Teradesk could call. Of course the best thing would be
to change aranym's power-off sequence.

And, to stay on topic, thanks for your hard work :)

I'll let you know. Man I love Ataris! Just about to add another one
- a 1040ST!

Happy Easter,

The following WEB sites seems unreachable.

<http://www.apak.fr/>
<http://www.abandonware-france.org/>
<http://www.altparty.org/>
<http://www.emojunkie.de/>
<http://lvogel.free.fr/stonc.htm>
<http://www.atari-st.lovely.net/>
<http://windom.free.fr/dfrm/>
<http://zorro.arcadia-crew.com/>
<http://www.popsyteam.org/boub/atari/atari.htm>
<http://www.gamebasest.com/>
<http://sinasohn.com/abacus/links.htm>
<http://atari.apinc.org/>

Can something be done with it ?

Regards,

--=20

I've only done this via dialup modem. I run MagiC OS and bought CAB browser and it comes with I-Connect dialer program. Works good I have gotten on with my TT and STacy2 just fine. A lot of people don't like MagiC or don't have it so they use STing or STik instead of I-Connect with Standard TOS with CAB or another browser.

There is also the TAF MINT package that has a dialer and Web Browser in it. It installs only in Mono and not color. It's old but from what I heard about it is that it works. I believe it also requires at least 4 Meg of RAM.

I have not tried it recently but the Open Source (I think) browser
High-Wire and STik or STing dialers are your best bet for a stand ST to
get on the Web.

Hi,

there's a new CrippleMiNT version available on my website. Now it's possible to
configure a network card. But to do so, read the README

Bye

maanke

I've just released a small GEM utility for editing keyboard layouts for
FreeMiNT. It allows you to easily edit the keytable.tbl keyboard files
used by FreeMiNT >= 1.16. ARAnyM-users in particular might find this tool
useful due to the amount of different PC keyboards.

It's available on http://atari.nvg.org/download.html

Hi,

I once used "Big Convert" to convert Neochrome or Degas Elite pictures IIRC.
Maybe that's the one you're looking for ?

Pretty much. Here's a copy of my post from 2004 regarding recasing a Falcon. If you use a mini-PSU you will also need an AC - DC regulated adapter (which will sit outside the Falcon like a laptop's power supply does). This is fairly easily sourced.

- - - - -
How to wire an ATX supply to a Falcon:

For an ATX supply, first obtain one that has an on/off switch. (I'm not kidding -- many do not have one.) Note that the Falcon pulls around 60 watts, and anything you connect (CT60, hard drive, etc.) will also use power. I'd suggest a power supply of at least 100 watts and as quiet as your pocketbook will allow.

Connect the green wire to one of the black wires, which bypasses the internal power switch you don't have on a Falcon. Alternatively, see

For an ATX supply, first obtain one that has an on/off switch. (I'm not kidding -- many do not have one.) Note that the Falcon pulls around 60 watts, and anything you connect (CT60, hard drive, etc.) will also use power. I'd suggest a power supply of at least 100 watts and as quiet as your pocketbook will allow.

Connect the green wire to one of the black wires, which bypasses the internal power switch you don't have on a Falcon. Alternatively, see
http://www.gideontech.com/content/articles/196/1 to see how to wire an internal switch. Connect three red wires to the three power prongs farthest from the keyboard. These are +5V. Connect four black wires to the next four prongs. These are grounds. Finally, connect one YELLOW wire to the prong closest to the keyboard. This is +12V.

If your Falcon has a built in power supply that you no longer need, it is helpful to cut off the cable so you can reuse the eight prong connector instead of soldering. By combining the Falcon cable with a few PC MOLEX cables you can easily build an adapter cable that will allow you to disconnect the power supply should the need require. If you use electrical twist caps, you don't even have to know how to solder. If you do use the Falcon cable, HEAD THIS WARNING! PC POWER CABLES USE BLUE WIRE TO MEAN -12V. THE FALCON NEEDS +12V. That means that you will be connecting the blue Falcon wire to a YELLOW ATX wire.

Galen

LS

AHCC, a Pure C compatible C89 compiler for Atari's,
is nearing its beta status.

AHCC currently fully supports hardware floating point
operations by generating line_F instructions.

Now I am looking for someone who would like to port
a good software floating point package that implements all
the MC68881 operations.

I have heard of the existence of a good BSD package.

AHCC converts operators on floats to calls of the following appearance:

Calls take 1 or 2 of a convenient 12 byte struct by value and return such a struct for passing the result.

```
typedef struct
{
   short exponent, filler;
   long mantissa[2];   /* or anything at your convenience */
} double_t;
```

The type is for internal use only.

operators look like:

```
typedef double_t unary_dbl_op (double_t val);
typedef double_t binary_dbl_op(double_t left, double_t right);
```

coercions look as follows:

```
typedef double_t cast_d_l(long);
typedef double_t cast_d_f(float);
typedef long     cast_l_d(double_t);
typedef float    cast_f_d(double_t);
```

float & long are returned in D0.
Returning of structs is done by AHCC the same way as done by Pure C. A pointer to the return struct is implicitely passed as an extra parameter in front of the others;
The function itself assigns the result through this pointer.

Coercions are generated before calling operators (and after :-).

For painless interoperability I assume it is clear that I am looking for a person owning a legal copy of Pure C.

It is allowed to declare all function types as cdecl if that would be of convenience.
I dont care about the names of the functions.

Note, that type double itself cannot be used because Pure C unfortunately uses a form of double without the filler when generating code for sw floating point.
I want to end this anomaly.

I am very good in forgetting about vital issues,
so if there are questions e-mail me.

I registered Speed of Light and have it somewhere I can dig it out and take a look if it does 8-bit graphics or not. I don't recall as I used it to convert IMG and other odd files formats to JPG on my TT back in the day.

Someone mentioned LookNSee, which sounds like it.

I'm still searching through my software.
Thing is, I have most of it boxed up so it's taking awhile to find it.
I think it came on a Cover Disk of a magazine or I downloaded it from a BBS.

The program didn't have any fancy graphic displays,
It was for the most part just in Text, and I think you just pressed a key for which ever option you wanted.

It may have been on a STart or AIM disk, I've not gotten into
those yet.

Hi
I'm looking for the original software of old Cubase versions 1.0 to 2.5
I have a dongle of Steinberg, which I wanna test for what program it has
been made

I'm also looking for the original software of PRO24 vers. 2.1
I have the dongle and the manual but I lost the disk

Thanks

jos ,
i thought you would have asked the midi group about this ?

i really liked these programs ,

they still remain the best there are .

i have original disks but here is an internet link to where they can be found.

http://atari.music.free.fr/

nobody seems to express much interest in this area ,

not as much as the people used to.

too bad ,they don't know what the're missing!!!!!

charles

Harrison: "Atari is gaming's best opportunity"

Johnny Minkley 17:04 (BST) 04/03/2008

Ambitious plans for Atari rebirth will also be "fun"

Twelve hours after being unveiled as the president of Infogrames, Phil Harrison this morning delivered his first speech to colleagues and key press in Manhattan's Ritz-Carlton hotel.

After an informal introduction by new CEO David Gardner, who spoke of "the vision Phil and I have been sharing and really enjoy, the idea of the future of a network-centric gaming world", Harrison described Atari as "the best opportunity that exists in the industry today to redefine, refocus and re-energise an incredible brand, an incredible group of people towards that networked future."

Explaining why he quit his former role as head of PlayStation development, he pointed to "the things that excited me the most, the things that turned me on as a gamer, and as a business person, and as a creative person were the future of our industry, the connected community experiences - all the things we're starting to see emerge that are really exciting players around the world.

"And those are the things I started thinking about in terms of creating a company or getting involved with a company to really shape and direct a business towards that future."

During the relaxed session, both Gardner and Harrison were keen to stress that their ambitious plans for the rebirth of Atari would also be "fun", the former EA exec insisting he did not want to "create a big corporate entity", with Harrison - who, like Gardner, was notably suitless and tieless, jesting: "as you can see David and I are the suits".

Harrison closed by talking up Eden Studios' Alone in the Dark, itself a bold rebirth of a classic brand. As our sister site Eurogamer revealed yesterday, Harrison arrived at Atari's New York HQ hours before the announcement of his new role, with one of his first tasks to sit down with Eden for a private demo of the Xbox 360 version of the game.

Gardner added: "This product will really make it clear where we're going, from a technology point of view, and a product quality point of view."

Well, I received the new Falcon PSU from Best Electronics yesterday. The voltage is stable and up to specs. However, the Falcon still has the same issue - sometimes it boots, sometimes it doesn't (mostly, as of late, it doesn't).

So, I'm guessing the Nemesis is probably to blame, or some other tiny little problem, short, or bad component on the motherboard?

I certainly can't see any trouble with a visual inspection. Nothing looks burned out, everything is seated / connected (including all the wires and solder joints for the Nemesis. I even went through the Nemesis documentation step by step, to make sure everything was where it's supposed to be (it is).

Realistically, I don't have the time, or patience, to remove the Nemesis, and put everything back the way it was before the upgrade. I'm not really sure I'd even want to attempt it if I did. I've never won any soldering awards (hahaha).

Nor am I in a position to send it off to Wizztronics or ATY (if they'd even take it). The idea here was to sell something I don't really use much any more, but to get it into the hands of one of the Atari faithful. I'm not sure that's likely now, given the Falcon's current problem.

So, I'm at a loss. I now have one very temperamental Falcon, and two good Falcon power supplies...

Bottom line... if anyone feels like they still want to take this bird off my hands, and feels they have the technical know-how to fix the problem, by all means, I'm still open to offers.

Thanks.

> little problem, short, or bad component on the motherboard?

I'm afraid that I haven't followed this thread closely so I might ask some questions that has already been answered.

1. Does the power LED on the keyboard light up when the Falcon doesn't boot?
2. Is there any floppy activity?
3. Is the screen always black when this happens?

If (1) and (3) I would guess that there's a problem with the DMA clock patch, or the DSP clock. I would start by undoing the Nemesis DMA clock patch (IIRC a resistor or capasitor patch near the DMA chip. I can't recall the details, I removed the Nemesis from my Falcon in 2001.). If that doesn't help, undo the DSP acceleration.

If the power LED doesn't light up or there's floppy activity when this happens then there's something else that's wrong.

Hello,

is there a Telnet client available which will not use GEM and work under
plain TOS and Sting? I tried a GEM based client and even with NVDI it is
slooooow.

cheers,
Matthias

1. Yes, the power LED lights up.

2. No disk reading is attempted, but the floppy activity light flickers.

3. Yes, the screen is always black.

Other "signs of life" are the fan spins up to speed, and the speaker lets out a little pop when the Falcon is first powered on, and then about every 6 seconds or so.

>If (1) and (3) I would guess that there's a problem with the DMA clock patch, or the DSP clock. I would start by undoing the Nemesis DMA clock patch (IIRC a resistor or capasitor patch near the DMA chip. I can't recall the details, I removed the Nemesis from my Falcon in 2001.).

OK, I removed the wire from the Nemesis to the circuit trace that's near the DMA chip (this is the trace that you scrape away slightly

during the installation so you can solder this wire to it, as well one
leg of the tiny capacitor - who's other leg attaches to one of the
pins of the DMA chip itself.

Both removed. The only change was that I no longer heard the speaker
pop (not during power up / not every 6 seconds).

>If that doesn't help, undo the DSP acceleration.

I guess I'll try that next.

>If the power LED doesn't light up or there's floppy activity when this
>happens then there's something else that's wrong.

This is not the case.

If you only removed the wire the DMA chip has no clock. During
installation the clock feed to the DMA chip is cut somewhere, this has to
be restored.

> >If that doesn't help, undo the DSP acceleration.

> I guess I'll try that next.

Try reinstalling the wire to the DMA, and undo the DSP acceleration.

Hello Atari ST fans from a lifetime Commodore 8bit and Amiga fan:-) I have never used an ST so I can only assume they use standard Atari style joysticks? If so, you may be interested in this sale.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=180221729871

These are genuine new boxed Competition Pro joysticks from new production, not old stock.

Enjoy:-)

I'm second Peter, really cool work. Can you tell any features yet? I
mean, what about code generation PureC vs AHCC, speed of compilation
etc... And if you really want to try something, try my quake port ;-)
It needs 32bit ints (what about this in AHCC?) but the compilation is
as simple as adding files to project. No gcc extensions, pure ansi and
a lot of floating stuff. You can disable asm routines for now (but it
would be nice to test it too, of course).

Forgive me if this is a dumb question to long time Atari users. I've
never owned an Atari computer, I'm a C= user. I think I read somewhere
that TOS was based on CP/M-68000. If that's the case, is TOS binary
compatible with CP/M-68000 programs, or at least source code
compatible?

I'm just curious as I like to tinker with CP/M boxes as a hobby. I own
a Commodore 128, Televideo TS-803H and Kaypro 10, all of which run Z80
CP/M. Thanks in advance.

AHCC produces about 8% larger code in twice the time needed
by Pure C.

Both can be improved at an amount of effort of n^3, where n is
the gain. :-)

At this moment, prior to publishing, I do not intend to jeapardize
AHCC's code quality.

AHCC can be told to generate 32 bit ints.

I am now working on a hypertext.
Writing documentation is extremely boring and tiring,
as all programmers know.

That's really out of question. If you want some kind of compare, try to ask how MSDOS and CP/M are compatible with each other :) They are similar, yes, but source level compatibility, hardly.

There has been some discussion in the past here about the maximum partition size available on Ataris. ISTR that Uwe has said that with TOS 4 or MagiC you cannot exceed 1 GB.

However, a club colleague with a CT60 Falcon has installed several hard drives in it, and recently added a 15 GB one as a single partition. He is runing HDDRIVER. This seems to work fine under MagiC, and he has experimentally transferred nearly 3 Gigs to it, all of which appear to be accessible without problems. The Jinnee desktop reports for it:

```
12.044.165.120 bytes free
 2.961.072.128 bytes used
15.005.237.248 bytes total
     1.831.694 clusters
            16 sect/cluster
           512 bytes/sector
```

The disk itself shows:

```
 2.130.024.465 bytes
       129.089 files  (many of these are quite small)
        12.869 folders
            23 links
```

Of course the 16 sect/cluster means that even a 1-byte file takes up 8kB of disk space, but then there is plenty of room on the drive!

I don't know whether the CT60 or its drivers have changed anything. Any comments, Uwe? It would be nice to clear this up once and for all! Specially as it is getting increasingly difficult to buy anything smaller than 40 GB or so these days!

Well, I am not Uwebut seems to be that this is a case of RTFM.

That's what Uwe says on his website:

VFAT or FAT32 partitions (long filenames, virtually unlimited partition
size) with MagiC or MiNT

Regards,

Frank

Hi,

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometime dated information. Part of these bookmarks persist since the creation of the WEB page, in 1996.

The interest with these numerous bookmarks, there's almost 600, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It has now become quite consistent.

This is a first experience in the direction of WEB 2.0, because even if I'm responsible of its creation, *ATARI Search Engine* can possibly be extended by everybody connecting at

<http://www.google.com/coop/cse?cx=3D014753128619202207476%3Atzogojpdahi>=

Have a good ATARI WEB Surfing :-)

This has to be a FAT32 partition, but it cannot be FAT16. A 16 bit FAT does not support more than 65535 clusters. FAT32 partitions are supported by MagiC and MiNT, but not by plain TOS.

Greetings everyone!

Here is the lucky and the proud winner of the February prize at The DarkForce! BBS:

February 2008
1. ST Magazine - Gemini8 wins the free 3 mag. subscription

Congratulations to our winner!

Also, here is the prize for March 2008:

1. ST Magazine - some lucky Atari caller will win a free 3 magazine subscription.

Congratulations to our winner, and good luck to this months callers!

 :)

Hi;

Version 3.95 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release fixes several bugs related to handling of times and dates.
It also brings an improvement in behaviour related to 'special' applications.
Powering-off of CT60 at shutdown now works correctly, even in single-TOS.

Beside the changes made to the program itself, a new page was added to the introductory section of the hypertext manual, highlighting some nice features specific to TeraDesk which otherwise may pass unnoticed by users.

Have fun.

Djordje

Is anyone selling TOS 2.06 EPROMS any more??

Thanks

Steve

OK, I followed the Nemesis manual, and restored the original clock
signal to the DMA chip. Note: I didn't solder at this point, but had

a temporary wire bridging the gap of the trace that had been cut when the Nemesis installation was done (more on this later). Still no booting, although the monitor display was now white.

>> >If that doesn't help, undo the DSP acceleration.

Next, I undid the DSP acceleration (again, following the Nemesis manual), and restored the original clock signal to it. No difference. White screen, or occasionally, white screen with some randomly colored squares.

Then, the final nail was put in the coffin...

In an attempt to permanently solder the wire to the trace of the board that came from one of the pins of the DMA chip, I got it wrong on the first try, and, in removing the wire, pulled the trace up with it, along with one pin/leg of the DMA chip.

This left just the tiniest pice of the pin/leg sticking out. Not really enough to solder to... but I tried anyway... and then, due to the closeness of the pins on the DMA chip, and my medicore soldering skills, and my not taking enough time to do things carefully... ended up getting solder on the adjacent pin, and just generally made a mess. I got frustrated, and in trying to fix that, lost another 2 DMA pins, and part of another trace.

Needless to say, I'm done, and so is the Falcon.

This bird is dead.

Time to sell some Falcon parts...

As you may know from my other recent posting here, in trying to reverse the Nemesis installation on my Falcon, I botched the job when it came to the DMA chip (pins / traces pulled).

So obviously now, my formerly "slightly tempremental" Falcon has become a rather large, and not terribly useful paperweight.

Some folks have asked if I might be parting it out, so that's what I've decided to do.

So, DMA chip aside (ahem...)

...let me know what, if anything, you're interested in.

I have 2 good power supplies (one of them is brand new from Best Electronics).

I have the Nemesis card and buffer board (although I can't guarantee they are 100% OK, since I suspected that might be why my Falcon was misbehaving in the first place? Having said that, reversing two of the Nemesis modifications (prior to messing up the DMA chip) did not resolve the issue I was having with the Falcon booting, so it might very well be just fine. Plus it booted and ran in both Nemesis HI and LO a few weeks ago when I brought it out of storage for testing and picture taking.

I have the case (which is very clean).

I have the keyboard (modified with "TT-Touch" silicon key contacts).

I have the Actionsoft 14MB memory card upgrade with 16MB SIMM.

I have the TOS 4.04 chip (and I suppose any other chips I can remove from the board easily).

If there's anything else anyone might want, please don't hesitate to ask. Obviously, I will be checking back here, but email is the best way to contact me if you're interested in anything, or have any questions.

As for prices, send me your offers and we'll go from there. I'm reasonable.

Here are some pictures of the bird from a couple weeks ago - before she started acting up, and before I viciously attacked her with a soldering iron...

http://www.dslextreme.com/users/nurmix/F030.htm

Thanks.

```

I've gotten hold of a Minolta CD-10 SCSI PCMCIA card-reader, a PCMCIA to Compact Flash adapter and a 1GB Compact Flash memory card. I'm trying to make it work with my Mega STe (TOS 2.06), but it only partly works. I'm using HDdriver 6.13.

My SCSI setup consists of:

- Mega STe internal SCSI hard drive (via Atari interface, ID 0)
- ICD Link II host adapter connected to DMA port
- Minolta PC-10 PCMCIA card reader (ID 4, terminated)

The device appears to be recognized by the system (it says "Sandisk DSP" when I boot up and the HDdriver info come up -but only if I turn its termination off, which doesn't make sense as it's the last and only external SCSI device).
Still, I'm not able to actually use the card-drive. If I install desktop icons for the missing device I get several device icons, but

nothing happens if I double-click them.

I've messed around with the format/partition stuff in HDDRUTIL.PRG, and I suspect I've done something wrong at this stage. From memory I seem to recall Mr. Seimet saying that there is usually no need to format any drives (which makes me wonder what the "format" option is for?), but rather just partition it.
I've tried both, but since formatting seemed to go on forever I reset the computer.

Partitioning seems to work fine, but I'm not sure what kind of settings I should use and what I should enter where it says "Type". And 1 GB is the size limit for TOS, isn't it, so I should probably split the 1GB CF card into 2 equal partitions. Tried that, but I still didn't work.

Ultimately I would like to make the CF card compatible with my Mac as well as the Mega STe so I can easily transfer data between the two. I suppose that would mean making it MS-DOS compatible, but how?

Formatting is only required if a drive has bad sectors.

Since TOS 1.06 has a maximum partition size of 512 MB you should ensure that your partitions are definitely smaller than that, e.g. 511 MB when partitioning.

> Ultimately I would like to make the CF card compatible with my Mac as
> well as the Mega STe so I can easily transfer data between the two. I

You can create DOS/Windows compatiable partitions, provided that you are running MagiC or MiNT, since TOS does not support them. Or you can create a single partition (smaller than 512 MB, of course) which is both TOS and DOS compatible. The appropriate options are offered in the Compatibility dialog window.

Since your card reader does not work properly as far as termination is concerned the problems you are observing are hardware problems, by the way. Your cables may be too long. Or the card reader requires the Atari to have its own SCSI ID (initiator identification) which is something the ICD Link does not support. Some SCSI devices do not work properly without initiator identification.

But no harm done even if I set HDdriver to format the card, right?

Does the same apply for TOS 2.06 which I have?

That's great!
I have MagiC, but will use the computer mostly in TOS mode.
Yes, I noticed the "Compatibility" button which gives me a choice of
TOS, TOS (minimal sector size) and DOS. However, that made no
difference. It defaults to 32 tracks and 64 heads -should I change
this?

Also, in the main section of the "partition" window, should I enter
anything where it says "Type" (___) next to each partition size?

That may be the case. I didn't get a manual with the card-reader, so I
wouldn't know.
I do actually have a Link 97, but a couple of wires have broken loose
from its PCB and I don't know where they go, which is why I'm using
the Link II.

Strangely I did eventually get the memory card appear on the desktop.
I'm not sure what I did, but it seems I had to fill it with something,
which I did by installing the HDdriver driver on to it.
Very cool to have a completely silent drive!

```

The Link 97 seems to work after all.
I also tried with a smaller memory card (256 Mbytes) in order to avoid
that size limit problem.
What works is to partition the card as TOS. If I do that it's

available on the TOS desktop (I always reboot in order for the
partition information to be reloaded).
But if I choose the DOS compatibility option nothing happens if I
double-click the drive icon on the TOS desktop.

It doesn't seem to be DOS compatible either: if I insert it into the
Mac's card-reader I'm alerted that the card is unreadable and if I
want to initialize it (I suppose "initialize" is the same as
"partitioning").
So If I partition the (256 MB) card on the Mac with the following:

- 1 partition
- MS-DOS file system
- Master boot record

.... the insert it into the SCSI card reader on the Mega STe and reboot I'm not able to access the memory card (if I double-click the drive's desktop icon nothing happens).
And why do I get 4 icons for the drive?: F, G, H and I (the Mega STe hard drive is C, D, E). I just partition the card into one partition, so this doesn't make sense.

Hi !

S>And why do I get 4 icons for the drive?: F, G, H and I

There's a setting somewhere in the HDDRIVER configuration that will tell HDDRIVER how many drive letters it should allocate for a drive with removable media.

As for the combined TOS/DOS compatibility: That's a special option which might be available in HDDRUTIL 7.x and up only. I don't have a 6.x version installed, so can't check. The option reads "TOS & DOS kombiniert (combined)" in version 7.8.

MagiC 6 or MiNT with NewfatFS should be capable of reading DOS-compatible media.

With best regards
Ekkehard

Maybe wrong programs order ? or wrong NVDI settings ? or, even,
some corrupted file ?
Anyway, I just agree with MiKRO : NVDI bypasses the blitter, so
just set it up correctly and run it, and everything should run
fine.

Sure Lance - plety of us use similar converters for hooking up CF cards to the various 8-bit IDE solutions out there. They work great for me.

Hello,

I have messed with order and NVDI settings. Corrupted file NOT likely. Because no matter what order I put NVDI in without doing this shut off the blitter and load in actual NVDI then turn the blitter back on (thanks to that 440 byte program that is in the auto folder) it will crash at the same point when it begins to load NVDI. But if I do that shut off the blitter move the actual NVDI.PRG to a created NVDI folder and then it loads in NVDI then turns the blitter back on it works fine and in almost any position in the boot order. I am not disputing that it may be a hardware issue but that is not likely either. Software has been rock solid for years. The only time I have ever had any issues is when I started messing around with getting a working MINT setup. That comes from actual trial and error till the setup is working. Again see no need to do a fresh install, since my setup has been rock solid since the original CT60 came to me 4-5+ years ago now.

Xref: g2news1.google.com comp.sys.atari.st:11179

I now have the widescreen to play with :-)

The good news is that it boots and I am using it now in my usual resolution.

The bad news is that I still can't get the resolution selection screen to show 1440x900

I had an idea today. I had previously left the monitor section unchanged and I thought that it might not show 1440 because it was greater than the max resolution.

What I can't figure out is why there are fewer lines in the mvdi.cnf than are shown in the resolution settings at boot time.

The settings I have entered for 1440x900 where generated from http://koala.ilog.fr/cgi-bin/nph-colas-modelines

I am not sure what order to put the x x x values in but at the moment it doesn't seem to matter.

OK. But, just for satisfying my curiosity : which version of NVDI
do you run ?

Regards,

J.-Luc

Hello,
   NVDI 5.03 is my version which as far as I know is the last version
that was ever created.

Followup post...

I did some testing today, and took some "up close and personal" pictures of the Falcon. You can check them out here:

http://www.dslextreme.com/users/nurmix/F030.htm

MY INFORMATION:

I'm in Southern California, near Los Angeles International Airport, in the USA. You can contact me via email through my web site (see my signiture), or directly:

p a u l [at] n u r m i x [dot] c o m
(fix the address accordingly before emailing - remove spaces, etc.)

FALCON INFORMATION & MODIFICATIONS:

The Falcon is a 14MB standard cased Atari-branded Falcon that has had the audio modifications done to it that made it work better with Cubase Audio. These included:

-DMA fix
-input is line level
-bass-boost removed from output.

I bought this Falcon brand new from Guitar Center in Hollywood, CA - right around the time Atari gave up on them.

It uses an "Actionsoft" memory board, with a 16MB PNY SIMM fitted.

I replaced all the key contacts with "TT-Touch" contacts, that give the keys a more tactile feel.

I installed an external switch to disable / enable the built-in speaker.

It has the Nemesis accelerator installed, which increases the speed of the Falcon. The speed is software selectable:

- Nemesis OFF = standard 16MHz (no acceleration)
- Nemesis Low = 40MHz clock / 20MHz bus
- Nemesis High = 48MHz clock / 24MHz bus

The Nemesis (with the addition of the included "Videlity" software) also allows for extended VGA and true color resolutions.

Part of the installation included an additional "buffer board" installed as part of the Nemesis upgrade, that, if I remember correctly, resolves some issues with SCSI transfers and over all stability.

I will include the Nemesis installation manual, as well as the Nemesis and Videlity software.

*** NOTE ***

The Falcon powered up fine today, as you can see by the pictures. However, I still believe there is a problem with the power supply, because as I mentioned in my original post, most times it powers up fine, sometimes it takes a few tries. And when it doesn't power up, you can hear the Falcon come to life, but the boot process doesn't start, and there is no screen display. Usually turning it off and on a few times resolves the issue.

Once it's up and running, it's fine.

I'm fairly certain the PSU is to blame, although I don't see any obvious signs that it is failing (no blown capacitors, etc.), but just keep this in mind if you decide to buy it.

Please email with any questions or offers. I've gotten a few already, but I wanted to post some more information and pictures - mainly due to requests from users here.

Thanks for looking...

Well, Carey, I'd recommend to find the reason for this -- one day your
harddisk die and you may get into serious troubles when you wont be
able to reproduce exact nvdi/auto folder settings and since everyone
use just NVDI nobody will be able to help you.

Lance,
   Yeah I am still alive. Me and my friend have been working on my 87
Shadow to get the car dialed in and ready for racing it at the track
this summer. We are looking at over 400HP with what we have done to
this car. Right now we are installing a line lock system for power
braking it at the track and a fuel cell then we are going to paint it red.

I will try and make time to give you a call soon.

Talk to you later,
Carey

Hi Peter!

PS>What I can't figure out is why there are fewer lines in the mvdi.cnf
PS>than are shown in the resolution settings at boot time.

Are you absolutely sure the file you're editing is the very same the driver is actually loading?

With best regards
Ekkehard

I've just listed a number of issues of the vintage video game & computer magazines "Video Games" & "Electronic Games". These issues date back to the period 1982 - 1984.

Articles cover most popular console & computer systems of the time as well as pinball & arcade machines.

The link to the auction listing follows. http://tinyurl.com/yvkmo5

I'll post worldwide and will be happy to consolidate postage for multiple purchases.

If you have any questions contact me via the link on the listings page.

I believe you should always use FOLDRxxx *unless* you have HDDRIVER
installed, which does it for you ...
```

>And, is there a FAQ somewhere that lists the bugs and fixes for all versions
>of TOS?
>

John Townsend of Atari published a list & it's been updated ... but only
to TOS 3.05 :-(. It's at this URL:
     http://www.atari.st/content.php?type=t&file=toslist

I've written a small GEM utility to edit AKP-style keyboard maps as used
in TOS 5 and FreeMiNT. Support for Atari keyboards is finished, and I've
also made an on-screen keyboard reflecting the physical layout of the PC
keyboards typically used on Hades and Milan. In order to support this on
the Hades I need a map/overview of scancodes. Does anybody know if such a
thing exists?

I did wonder that at first but I have checked several times.

Now that I have [monitor] section details for the widescreen, they
show-up in the mvdi res selection screen during boot up.

It's a good one this.

Peter

Harrison to leave Sony - join Atari ?

Worldwide Studios boss to apparently join Gardner at Atari

Sources have indicated to GamesIndustry.biz that the head of Sony Worldwide Studios, Phil Harrison, who will leave the company at the end of this week, is to join Atari in the near future.

Harrison, who recently expressed his frustration at Sony Japan's lack of foresight on the casual games front - ceding ground to Nintendo in the process - will apparently join up with ex-EA executive David Gardner and spearhead Atari's push into the casual space.

While at Sony, Harrison - one of the most respected people in the games industry worldwide - has overseen a large number of high-profile successes, including titles such as EyeToy, SingStar and the forthcoming PlayStation Home project.

That talent for spotting and evolving more mainstream products on the PlayStation 2 and PlayStation 3 platforms would be most welcome to a company that previously indicated that it would re-focus its business on the online and casual games spaces.

And following the departure of former CEO Patrick Leleu recently, his replacement, David Gardner, who arrived in January, has stated his ambition of seeing the Atari brand back in favour following a lengthy troubled spell for the iconic publisher.

"My goal is to help rebuild that passion around the company," said Gardner. "First, with the employees and then very quickly to spread it virally on the internet to millions of new customers. I have a personal challenge to create a world-class company that is European in flavour but reaches global markets.

"This will take some time of course, but here we have fantastic gaming DNA formed at the birth of the industry, access to creative talent and a company with the working capital to make the necessary investments to realise this vision," he added.

If Harrison does make the move to Atari it would be a massive shot in the arm for the publisher, and a sure sign to investors that the board is very serious indeed about the prospects for recovery.

Kaz Hirai, president and group CEO of Sony Computer Entertainment International will assume Harrison's duties, and said in a statement: "As one of the founding members of SCE, Phil played a key role in the development and growth of the PlayStation business and our industry."

"It is sad to see him departing from SCE, but I wish to express my gratitude for his many invaluable contributions and also wish Phil the very best of luck in his future endeavors."

Harrison, who has not yet confirmed his possible move to Atari, added:

"The past 15 years at Sony Computer Entertainment has been the defining journey of my life so far.

"I am grateful to all the PlayStation family for their incredible support, guidance and friendship. It has been a privilege to serve as part of the team and be inspired by them on a daily basis.

"I am so proud of everything PlayStation has achieved and will continue to support its future in every way I can."

UPDATE: There was some confusion previously over Atari Inc and the Infogrames companies, which are not the same entity. David Pearce was the former CEO of Atari Inc, while David Gardner replaced Patrick Leleu at Infogrames. It is Infogrames that is the possible destination for Mr Harrison, not Atari Inc. GamesIndustry.biz would like to apologise for any confusion arising from this.

> of trial and error.

I did this in Devpac as well for the Milan, but then I started using Aranym on various laptops with various keyboards and needed a proper tool for this. Ofcourse, I could have hand-crafted lots of keyboard tables in the time it's taken me to make this tool, but that would have been a lot less fun ;-)

> Is this what you are after?

Not really. This is a map of IBM scancodes, what I need is a map of which Atari scancode is assigned to which key. On my Milan I did this by adding a printf("scancode %d\n", event.ks) in the evnt_multi-loop for this edit-tool and taking notes as I pressed each key. As I don't have a Hades I can't use this method for the Hades keyboard - unless someone with a Hades would do it for me...

I have one of those as well, I converted it to work on my Falcon. Haven't
used it for years though, I prefer using a TT keyboard instead. On my
Milan I use a cheap cordless keyboard and mouse.

I've got 3! One on my main Linux box, one on my 17 year olds comp, and one
put away, "just in case"...

Best dang keyboards *ever*. :)

Hi Jo Even!

Don't know if it wll help, but there is a 'Show Scancode'
KEYCODE.CPX from Mark Baines that runs on Ataris (?and emulators?)
and gives scancode as well as ASCII code for each key. If you
can't find it, I can mail it to you.

Regards, /Peter/

Greetings,

Years ago I remember a program for the ST/E and or Falcon
that allowed you to view many different pictures/graphic files
from different computer platforms including the Atari 8-bit machines.

I think it also allowed you to convert them to some of the Atari 16
bit picture/graphics formats as well.

I can't recall the name of the program, and there may have been more
than one program that does this.

Anyhow I am looking for a ST/e-Falcon program(s) that allows viewing and
converting
of Atari 8-bit picture and graphics files.

Also, a program or two that will allow the playing and converting of Atari
8-bit sound/music
files on a ST/e-Falcon.

Thanks, phantomm@suddenlink.net
.

I already have such a tool (in fact I wasn't aware of the existence of
this CPX so I made my own tool...), but that wouldn't help me on the Hades
because I don't own such a machine.

Anyway, Lonny has offered to help me on this, so it looks like the problem
is solved :-)

As most of you know here, I'm trying to sell my Falcon (in another thread here). Well, in that thread, I mentioned that it occasionally won't power-up. So, I've been doing a lot of testing lately, and am still having some issues, so I thought I'd ask the group for advice or suggestions. Thanks in advance!

You can check out the pictures here:
http://www.dslextreme.com/users/nurmix/F030.htm

The story so far...

The Falcon has been in storage for the last few of years, but when I tried it out last week to take the pictures for the potential sale, it fired up right away, on the first try. And did so several times after that. But testing since then has me worried.

The problem, in a nutshell is that when you turn on the power switch, the fan comes up to speed, the LEDs light up, and you hear a little click from the speaker, but you get no display. Then you'll get a click from the speaker about every 4-5 seconds.

Normally, when it doesn't come to life, cycling the power on and off a few times gets it going, but this doesn't seem to be doing the trick as it once was.

So, the past few days, I did some more testing, and took a really close look at the motherboard and components.

For clarity, the Falcon has __no hard drive__ attached, so it's just booting on it's own (and this has been tried with the floppy drive in place, with and without disk, and with the floppy drive completely removed - all with the same result).

The bottom line is that I can't see any physical damage or obvious visual problems on the motherboard. There are no blown capacitors, all the chips are seated, and all the Nemesis wiring and slder joints are in place and secure. I even tried another SIMM just to see if it made any difference, but it didn't.

With that in mind, I decided to remove the PSU, and take a really close look at it. I did notice that the largest capacitor in the PSU board appears to have very slight leakage. Also, I tested the voltage of the +5 and +12 volt leads. The +5 leads all read right around that amount (5 volts), but the +12 lead was all over the place, ranging from about +4 volts to a high of around +8 volts. This seems to indicate to me that the PSU is indeed what's behind the problem. More than likely, all the recent use and testing has finally caused it to give up the ghost, because now, I can't get the Falcon to boot at all (just the fan, LEDs, and speaker clicking).

So, I'm at a standstill. I'd like to sell it, but without knowing for sure it's _just_ the PSU that's causing the problem (even though all signs are pointing to that), I'm not sure what to do. If someone is comfortable buying it under these circumstances, then maybe it'd be OK. But if it turns out the problem lies elsewhere with the Falcon, that person isn't going to be a very happy customer.

Having said that, I'm almost certain the PSU is to blame, based on the out-of-spec voltage readings, and based on the fact that once the Falcon does power up, everything functions 100% as it should, including the various speeds of the Nemesis. If there were a motherboard problem, or a chip was dead, this wouldn't happen.

So, I'm going to try to get ahold of another Falcon PSU to determine once and for all if this is indeed the problem. If anyone has one they'd like to sell, let me know. I'm going to check with Best Electronics later today to see if they still have some in stock.

Any thought, advice or opinions are welcomed.

A good question.  Does anywhere still exist?  ATY and Wizztronics are
"reluctant" to work on Falcons.

If I may inquire, why look for a Falcon PSU? It's not too hard to get
a device that provides +5 and +12V lines. I'd suggest something like
http://www.mini-box.com/s.nl/it.A/

Galen,

Wizztronics still does, once per week.

I'm planning on sending mine there, it definitely has problems.
They told me when I'm ready to send, let them know and they will send me
an RMA number.  They also told me they were well versed in the CT60, and
had installed and repaired them as well.

They are the only outfit I'm aware of that still repairs Falcons.

Thanks

I'd probably give it a capacitor change.

Hi Mark,

No, ImageCopy or GemView isn't the one I'm thinking of.

It may have been either shareware or Public Domain.

If I remember correctly, it was released around the time the
Falcon came out or shortly after.
I'm going thru my archives trying to locate it or something similar.

I had a problem like this with a friends Falcon. Turned out to be the
reset cap on the mainboard. Symptoms were white screen on boot, it would
boot once you pressed reset.

The PSU plug on the motherboard is much larger on the Falcon. I'm not
sure about the voltage / wattage differences though.

No. The monitor stays in sleep mode. The fan spins up, the LEDs come on, and the speaker gives a little click, but no activity on the monitor.

Cycling the power switch a few times used to bring it to life, but that's not the case lately.

I've got a new PSU on the way from Best Electronics. I should have it by early next week. I'll post here with the results.

If it ends up _not_ being the PSU, then...?

Which ones? Just on the PSU, or the entire motherboard? Many of
those are surface mount - not exactly simple to swap out. Having said
that, you're probably right.

Well, as I mentioned, I get nothing on screen, no ,monitor activity at
all.  Fingers crossed that the new PSU will fix the problem.

Interesting idea.  Is it as simple as connecting the proper +5, +12
and ground wires from this miniature PSU to the appropriate wires on
the Falcon's PSU plug?
```

Not going to work. It requires a 12 volt DC supply to power it. Probably for someone putting a PC in an automobile.

PicoPSU-120 12V DC-DC ATX power supply
- Tiniest DC-DC ATX PSU
- 120 Watts
- 12V input

PSU :-)

Wouldn't care to touch the SMDs, but it's doable if you're determined.

It's almost to the pint where I can't use my floppy drive. Almost every
c2-3 minutes from starting to use the floppy, I get the two bombs.

Geez, I'm just trying to get the HDD setup.

Drive problem or mainboard prob?

Also note that you should't use 1024mb for 1 gig, from my experiments
that's illegal too. Go for 1023 or less (and 511 for TTs etc)

That shorcut doesn't work here either, MagiCMacX.

If you use the English resource but the shortcut for the German one, does it then work?

There are IIRC some issues with the different layouts of the German and English keyboards such as Y and Z which have made some shortcuts a little "wonky" :-)

I've also reported to Gerhard that Phoenix does not display correctly under thousands or millions of colours, only a little better if 3D Desktop is switched off (blindly, since the checkbox is completely colour-filled).

I sent Gerhard the latest English resources the other day, the Alerts should all now be English, but there is still more to do elsewhere once he has had chance to check what is safe to edit.

Hi Mike,

Yes, I have been around for quite awhile. Mostly I read new posts, occasionally submitting posts either to questions or new ideas, and of course when I need help.

My weakness is in the fact that I am pretty much strictly a user of my Atari Falcon, as opposed to someone productive such as the software and hardware developers. :(

Anyhow, my Falcon is a C-Lab Falcon with a fitted CT60, and installed a tower case. The CT60 died, I think, so I've turned it off as it were. I repartitioned my drive, but due to the constant bus error problem, I'm having a heck of a time trying to install/copy files from the floppy to the hdd. Keep in mind however, that I've not used my Falcon for over a year, cause I thought we were moving, and we didn't, but the Falcon stayed put away and I just pulled it out last weekend.

I think what I'll end up having to do is send the CT60 to Rodolphe so he can fix it, then send my motherboard to Best Electronics so they can fix that....it also is having sound probs....one channel is very broken up.

Thanks for your reply Mike, and have a great day! :)

I am from Northwest Ohio.  But that is quite a drive for me.  Edward
Baiz Jr. is quite close to me living in the Notre Dame area.  Not to
mention Lonny Pursell is in the Ohio area along with Dan Ackerman who I
also believe is in the Ohio area as well.  I have thought for a long
time that maybe we should all meet somewhere and bring our hardware and
make a day of it.  But, of course real life events and scheduling
conflicts always got in the way.  Reminds me I need to get a hold of an
old friend that lives in the Grand Rapids, MI area.

Ttyl,
Falcon060

Well, perhaps not on CSAST.

Don't forget that the days of 2000+ posts are over. Traffic peaked (2,343 posts) in November 2004.

The last month with over 2,000 posts was January 1999.
The last month with over 1,000 posts was January 2004.
The last month with over 500 posts was September 2005.

Anyhow, you get the idea.

I suspect that a majority of the Falcons sold in the US are still in service (or lovingly stored), but most of the users no longer post (or likely read) here. If you have a question about a Falcon, I'll answer it if I know the topic. If you want a physical meeting, you'll have to buy a plane ticket.

Galen (still in California, but not turning on his Falcon as often as he used to)

Having helped with the translation, I can tell you that Z and Y
shortcuts in /most but not all/ menus and dialogs are reversed on
an English/US keyboard - they apparently use the scancode not
ASCII-code of the key. (Frankly, I don't understand why this
doesn't happen in /all/ cases).

Samf,
LOL, your more than welcome to come. I would love to meet all of
those guys that I listed in the previous post in person someday. If I
do nothing else in life I would love to meet my old atari friends that I
talked to over and over with online many times. Maybe someday my wish
will come to true. Although my Falcon will be very hard to transport
once I get it installed into its new place. I bought an OLD Pentium II
server case. This thing is HUGE but will give me plenty of room to work
with when putting this thing into the case. It came with TWO ATX power
supplies that work and its quite amazing how that setup works. It has

two power supplies so that if one quits working the other is supposed to take over. For 50 dollars I could not beat it. But as I said it is HUGE. It measures 31 inches tall X 29 inches deep X 10 inches wide. So it would not be easy to transport anywhere. But I would if I had to, to go meet some of these guys. I am getting ready to send the parts over to a good friend of mine that does autobody work. He told me that he can give this thing such a shine that people would be in AWE of it. He happens to know a guy that does some air brush artwork. He talked to him about putting a Falcon on the backside of this case (The opposite of the large opening) with Falcon written at the top and CT60 at the bottom with the Falcon perched on a tree limb. The guy said NO problem that is easy. He actually wanted something HARD. According to both of them they seen the computer that was going into the case and they thought it was such an awesome project that they would donate there time and materials for me. Just the automotive quality paint and clearcoat would cost well over 150 dollars that would be used on this case. I cant imagine what the labor would cost. But my friend said they both donate their services a few times a year and use it as a tax right off. He said he would paint it the base color and let his friend do the miral on the side of the case of the Falcon CT60 logo and then finish it off with tons of CLEAR COAT. I hope to post pictures on my own personal web site in the next coming months. Stay tuned.

Falcon060

That really sounds awesome....can't wait to see the pics!!!!

I'm planning on send my Falcon motherboard to Best Electronics so they can fix it up.
I keep getting bus errors (2 bombs) every time I use the floppy, and one of the sound channels are screwed up, keeps coming out all crackely.

After it comes back, then I'll fit the CT60 to it again and see if the motherboard was the problem. If not, then I guess I send the CT60 to Rodolphe.

Have a great day! :)

From what you are describing and with a advanced upgrade like the CT60,
it could be more than one thing causing the problem. Especially with a dead
or malfunctioning
CT60.
The first thing that came to mind was a problem with the DMA and or a
modification to it.

I've installed a few upgrades in Falcons before, however not a CT60. Most
have some sort of
modification to the DMA.

Check for a loose wire, cold soldering joint or break in the area especially
if it has been modified.

Of course, I could be wrong, but I've seen alot of problems come from this
area in the past.

Sending the Falcon to experts like you mention is always a good idea.

But it could be something easy to fix as well, if ya know alittle about the
Falcon motherboard
and can solder abit.

The problem was/is the hdd connector on the motherboard. It's a 2.5' to
3.5' adapter, and it's a bit loose. So, if it happens to lead a little
to the otherside, that's when I get the bus errors everytime I try to do
anything operation from floppy to hdd. Once I finally realized what the
prob was, I was able to install Magic without a problem.

So now I'm thinking I'm going to have to send my CT60 to Rodolphe so he
can fix it.

Man, I sure wish there was some outfit here in the US who could do
it...would save me alot on roundtrip shipping!! :)

Thanks and have a geat day!

samf,

I really dont think you need to send your CT60 out. There is plenty of things that can be done before going to such extremes. Do you have all the CT60 software installed??? Is NVDI installed??? Are the upgrades to the CT60 performed??? Has the CT60 been flashed with the latest and greatest 1.03c??? As you can see there is many other things that can be done and I also have a program that shuts the blitter off just before NVDI is loaded then I believe it turns the blitter back on.

Trust me I had the same error even after receiving my Falcon MOBO and CT60 back from Rodolphe. Cannot remember what it was I did to correct it, but it can be fixed. Now if you dont have the Falcon MOBO boosted to 25 mhz (instead of 20 or 16 mhz stock) then it maybe in your best interest to send both the Falcon MOBO and the CT60 to Rodolphe. It may also be in your best interest to have him take care of all the necessary updates to the Falcon MOBO and the CT60 including replacing the NVRAM if that has not been done to your Falcon as long as you have owned it. But let me know if you wish to talk in private and either by IM or phone or both. Whatever works for you.

Trust me nothing short of hearing the CT60 go POP, you probably did not hurt anything.

Ttyl,
Falcon060

> That shorcut doesn't work here either, MagiCMacX.

That is a simple problem. In the resource file is in the menu entry a space after the shortcut. If you remove them than it work, but I change the sourcecode so that someelse have not the same problem.

> I've also reported to Gerhard that Phoenix does not display correctly
> under thousands or millions of colours, only a little better if 3D
> Desktop is switched off

Has you try this:
-------------------------------cut-------------------------------
Im Phoenix-Verzeichnis befindet sich der Ordner SYSTEM, der die Datei SYSTEM.INF enth�lt. Diese Datei enth�lt Informationen, die Manager und Desginer zur Konfiguration ihrer Benutzeroberfl�che verwenden k�nnen. Damit Phoenix auf die Datei zugreifen kann, m�ssen Sie den SYSTEM-Ordner in Ihren GEMSYS-Ordner auf Laufwerk C kopieren. Hier nun eine Beispiel-SYSTEM.INF-Datei mit der Erl�uterung der Komponenten:

```
[Drives]
;<drive letter>=<descriptor>
;<descriptors are>:
;FD=floppy disk drive
;HD=hard disk drive
;CD=cd rom drive
;NET=network mapped drive
;RD=ram drive
;FDs and HDs are recognized by system and are therefore optional
A=FD
B=FD
C=HD
D=HD
E=HD
F=HD
G=NET
Y=CD
Z=RD

[IconMappings]
;<suffixes>=<img file without suffix>
APP;PRG;AC?;TOS;TTP=app
BIN=bin
GEM=gem
IMG=img
IND;DAT=ind
INF=inf
```

```
PRT;PRN=prt
TXT;ASC;C;DBS;DOC;H;ICO;LST;RPT=txt

[System]
AdaptBitmaps=1
GetVolumeNames=0
.
.
```

AdaptBitmaps ist f�r Grafikarten- und MagiCMac-Besitzer interessant, die mit mehr als 16 Farben arbeiten: Wenn Sie AdaptBitmaps den wert 1 zuweisen, wird beim Start von Phoenix eine Anpassung der internen Farbresourcen an die verwendete Grafikartenhardware durchgef�hrt. Das kostet allerdings ein wenig Zeit. Wenn Sie NVDI als Treibersoftware f�r Ihre Grafikkarte verwenden, ist eine solche Anpassung normalerweise nicht notwendig. Falls die Phoenix-Bedienelemente nach dem Start des Programms merkw�rdig aussehen, sollten Sie diesen Wert unbedingt auf 1 setzen.

-------------------------------cut-------------------------------

Sorry for the german, but if you translate it, we can start with an english version of the hypertext. ;-)

> I sent Gerhard the latest English resources the other day,

I got them, thanks to you and Peter West.

Gerhard

Aha, thanks. That makes all the difference :-)

There's still an issue with the desktop background colour which can't
make up its mind whether it's going to be all green or all pink though
;-)

I see that there is a typo in MANAGER.RSC which you can correct if you like:

String383 Wegde -> Wedge

Also, for the automomatic saving of the .inf files and for the
hypertexts to function, the enclosing folder for Phoenix should be
called just that. I had appended the version number to the folder name,
and neither .inf file saving nor the hyps would work.

Maybe it would be a good idea for your archive of Phoenix on your web
site to include what is still relevant from the previous version such
as the Demo folder and printer drivers BTW?

Peter reports that Designer crashes with a 68000 exception when he
tries to run it on his Falcon with edited resource files - please check
that it is OK if you can.

The main problem I'm having now is definitely the hdd header on the motherboard. It (specifically, where the hdd cable sets) kind of wobbles so, if I move it over a bit one way....the hdd and floppy get recognized. If I move it over a smidgen the other way....I can write from the floppy to the hdd without the 2 bomb bus error!!

Yeah, think I'll contact Wizztronics (they're way closer that anybody else) and see if the can take care of that, and the sound too, if they can. I just hope they know enough to NOT desolder the CT60 wires!!
I'll for sure ask them if they are at least familiar with it!

Anywho, thanks a bunch for all your input guys!!!
And have a great day too!!

I've recently aquired a Falcon with a BlowUp FX installed. The RAM
expansion seem to work fine, but I'm having serious problems with the
speeder part. It will crash almost instantly if I double clock the CPU,
and at 18 and 20MHz bus speeds I get lots of read errors when accessing
the IDE drive (actually a CF card).

The installation of the speeder and clock patch doesn't look too
professional, and I think I'm going to install everything from scratch.
Just wondered if anyone had any experience with these sort of problems and
could give me a tip or two :-)

Greetings,

I am getting ready to setup a Falcon and have a question about the
correct order of SCSI Devices for proper operation.

I will have 2-3 SCSI Hard Drives, 1 maybe 2 SCSI CDRW drives, 1 SCSI CDROM,
and 1 SCSI Flatbed Color Scanner.

What order should I have these installed for proper operation of each item?
I will be using, HD Driver and or Cecile.

Also, I have a SCSI CDROM CD changer that I may use if possible,
Does HD Driver and Cecile support CD Changers?

If so, I guess each CD would require its own Drive Letter?

Are there any other special settings for CD changers to work properly?

Thanks phantomm@suddelink.net

In theory, it shouldn't matter. In reality, some drives are more forgiving of being in the middle of the chain than others. Some trial and error may be in order. Of course, start with the first and last drive terminated (although rarely even that needs changing).

> Also, I have a SCSI CDROM CD changer that I may use if possible,
> Does HD Driver and Cecile support CD Changers?

I suspect so. I know that Extendos does.

> If so, I guess each CD would require its own Drive Letter?

Yes, if you want them simultaneously accessable.

> Are there any other special settings for CD changers to work properly?

I regret that I cannot help with this.

Galen

Don't terminate the first drive. The first device on the SCSI bus is the
Falcon itself, and it's already terminated (unless you have an internal
C-Lab SCSI connector). You should only terminate the last device on the
bus.

Hi,

May I suggest to listen the following podcast

     <http://twit.tv/floss24>

about POVRay past, current and future devels. Featuring
David Buck (original author of DKBTrace 2.12) and Chris
Cason (current maintainer).

I personally ported the latest 'C' version of Persistence
Of Vision 3.1g (Unix) on ATARI available from my homepage.

That's teaching us a lot !

Best regards,

The order of devices should not matter. Usually the hard disk drives get the lowest SCSI IDs.

> Also, I have a SCSI CDROM CD changer that I may use if possible,
> Does HD Driver and Cecile support CD Changers?

HDDRIVER does, but it is also required that your CD-ROM drivers suports the CDROM CD changer.

> Are there any other special settings for CD changers to work properly?

Ensure that HDDRIVER's SCSI initiator identification (please refer to the manual for details) is switched on. The Falcon should have SCSI ID 7.

Hello,

Anyone has got one of those to spare? I would like to hook up my
Falcon/CT60 to my modem/router alongside my Linux box.

Cheers,
JFL

I just wish the EtherNAT that I paid $152.00 for, on September 19th, in
the year 2005 would *ever* show up... :(

Anyone got any info on these? Thanks.

Have you gone to Nature's website?  I have finally seen my name on the
list......there are still about 20 or so people ahead of me.  Look for
your name on the list.

Yep, that's why I'd rather have an already existing EtherNEC and use it
*today*. I don't care for USB anyway. Now, with the chosen few who
already got hold of their EtherNAT, I'm hoping that someone will part
with an unused cartouche port solution.

For ethernec, contact tuxie (Ingo) at newtosworld.de

He made some ethernec devices. The devices are from very good quality
(bought myself 3 interfaces).

However, the ISA RTL 8019 AS card itself is not included.
For that you need to contact the local recycle shop (2nd hand shop) or
ebay.

Kind regards,

Mark

Well, I know that this doesn't help a lot but according to nature's website your name is no. 6 on the list of receivers after they delivered the batch of 17 boards they are shipping next.

http://nature.atari.org/news.html

Apart from that I hope you receive your etherNAT soon because it is a very reliable piece of hardware.

And don't be to sad that you still have to wait because although the networking part is working perfectly at the moment there aren't any usb drivers available (apart from one mouse driver).

Regards,

Frank

Yes, that is correct. With the Eiffel you can connect a PS2 type keyboard and mouse to the Flcon. Nice device....

As far as the RAM, I mean that Screenblaster II will allow me to use a
1024x768 environment with the extra RAM installed. Now I can only go as high
as 800x600.

Hello,

When I had the Hades060 I used specific order for my SCSI devices. When the Hades went bye-bye, I hook up the SCSI devices to my Falcon and used the same order and it worked fine. I am not sure if there is any real specific order, but here is mine: Scanner (ID 2), Jaz drive (ID 5) and Sony CD-RW drive (ID 6).

That would be nie to get together. I do not know about bringing your hardware
though. Hey I just might konk Lonny over the head and steal his Hades060. <g>

Hadn't in a long time - had kinda given up on it, honestly. I'll go check
it out. Nice to know they put a list up. :)

Thanks.

Well, for a disk based A8 magazine: Abbuc magazine ! Read more about
Abbuc and its (german) magazine here: www.abbuc.de

For an online magazine covering retro games, RGCD is also a good adress
www.rgcd.co.uk

There is also the czech FLOP magazine for the A8 which arrives once a
year (alas, all texts are in czech language, but the software on the
magazine is great)... http://raster.infos.cz/atari/flop/homepage.htm

-Andreas Koch.

Thanks everyone for the info, In the past I have always had SCSI hard drives
connected first then added on
as I got the other devices. I've had a small problem in the past with one
SCSI hard drive that had to be
the second drive in the chain or it would not be seen. Most problems I've
ran into had to do with having
good cables and proper termination.
The hardware and cables I'm using on this future setup is good stuff,
hopefully it will go well, I've had most
of my hardware in storage and can't wait to start using the Falcon for Net
and Graphics stuff again.
I've found nothing so far that really does what my last Falcon setup did.
Nothing I can really afford anyway.

My Power Supply on my 1040STe has failed and I'm looking for a
good used or new replacement.
Thought I would ask in here first before going into other waters.
This is the first 16bit I bought and it has worked flawless all these years.
Only reason the power supply failed was due to my kids curiosity with

flipping the switch on and off just to see what would happen.

So, anyone in N.A. happen to have a spare for sell/trade?

E-mail me if you happen to have one, I'd like to get the thing
back working. Wish it was just the fuse.

Thanks, phantomm@suddenlink.net

On the subject of the VME BUS in the MegaSTE and TT is the
expansion Bus in the MegaST/Stacy similar?
I know the actual connector is different, But is it possible to fix a VME
connection in a MegaST, STacy or maybe a Falcon using the expansion port.
Or is the hardware just completely different or not there?

Not really. VME is quite similar to the 68000 bus, and the crippled VME bus in MSTE/TT machines even more so - an adapter that allows MSTE/TT VME cards to be used in a MegaST should not be much effort - at most a simple PLD and some bus drivers.

Now if you want a full VME implementation (with busmaster DMA capabilities), that would be a bigger task (no matter if you have a TT or a ST).

I guess there were not enough cards/machines to warrant such a product.

Hi All,

My Falcon's ide header (where the ide ribbon cable plugs onto the motherboard) is loose, thus causing bus errors or just flat out not accessing the ide drive.

I sent an email to ATY Computers but they replied saying they don't do component repairs anymore due to a lack of parts, and if they did work on it, the fee would start out at $300.00.

I also sent the same email to Wizztronics, but have yet to receive an answer.

So, my question to you all is, what should I do now. I live in
Virginia, so am reluctant to send it to Rodolphe Czuba, shipping would
be horrendous!

Thanks all and have a great day!! :)

Could be that the Megabus wasn't used because when devices were designed
they tried to connect to the CPU allowing the device to also be used in a
regular ST too. Without need for them to make different hardware. That was
more or less the answer I got from Avant-Gard about the PC Ditto II anyway.
Not that low numbers is wrong just that they were trying to sell to the most
people. My Mega4 had the Ditto and still has a TEC Card but the Megabus
connector is still a virgin. Luckily when installing an AdSpeed I put a
socket for the CPU so the TEC Card didn't require solder.

No idea if that continued to the VME but seems likely.

Hi guys

I am using WordUp 3 by Neocept, I know its ancient but I really like
it, to be able to print to my Laserjet printer I need a copy of
Turbojet 2 or 3. Can you please e-mail me a copy of the disks, thanks.
I am also after the extended english dictionary and thesaures which
were available seperatly.

Thanks a million.

Paul

Would be interesting to know.

The Falcon only game Steel talons will only work on TOS 4.02 or 4.04,
not on 4.01 which I have. :(

Hmm, I guess that the game can be patched against TOS 4.01. But don't
think I can do it directly because I don't have a 4.01 Falcon (unless
I try hatari).

Are you positive that it's the actual header thats loose and not a problem
with
the ribbon cable?
Sometimes the connector on the ribbon cable will get worn out and cause
similar

```
problems.

The header was added on by another person in order to accept a regular
ide cable for 3.5'' hard drives.

All I can say is that it wobbles from side to side.  I'm thinking it
may be contributing to my CT60 not working either.  I'll be able to
test that theory when I get the present problem fixed.

Anyhow, it's not flopping freely from one side to the other, it does
require a small bit of pressure to lean it from side to side.

Thanks

This reminds me that the other day my Falcon couldn't start either after
having, like you, replaced the IDE ribbon cable. It so happens that I
had plugged in the middle plug! (don't ask what I was thinking).

So the original header is still present on the motherboard, and this is some kind of adaptor.

> All I can say is that it wobbles from side to side. I'm thinking it
> may be contributing to my CT60 not working either. I'll be able to

So you can either replace that bodge with the proper cable and 2.5" drive, or add bodges to make this one possibly work.

> Anyhow, it's not flopping freely from one side to the other, it does
> require a small bit of pressure to lean it from side to side.

At your own risk, *gently* bend the pins on the header *slightly* outwards. This will help give the best chance of regaining any dodgy connections.

Then you can work on a method of holding the assembly still. Glue is not recommended, but hot-melt might be OK if you're careful.

>Has you try this:

Translation follows:

-------------------------------cut-------------------------------

In the Phoenix directory there is the folder SYSTEM which contains
the file SYSTEM.INF. This file contains information that Manager
and Desginer can use for configuration of their user interface.
So that Phoenix can access the file, you must copy the SYSTEM
folder to your GEMSYS folder on drive C. Here now a sample
SYSTEM.INF file with a explanation of the components:

```
[Drives]
;<drive letter=<descriptor
;<descriptors are:
;FD=floppy disk drive
;HD=hard disk drive
;CD=cd rom drive
;NET=network mapped drive
;RD=ram drive
;FDs and HDs are recognized by system and are therefore optional
A=FD
B=FD
C=HD
D=HD
E=HD
F=HD
G=NET
Y=CD
Z=RD

[IconMappings]
;<suffixes=<img file without suffix
APP;PRG;AC?;TOS;TTP=app
BIN=bin
GEM=gem
IMG=img
IND;DAT=ind
INF=inf
PRT;PRN=prt
TXT;ASC;C;DBS;DOC;H;ICO;LST;RPT=txt

[System]
AdaptBitmaps=1
GetVolumeNames=0
.
.
```

AdaptBitmaps is of interest to owners of graphics cards and MagiCMac who work in more than 16 colours: If you assign the value 1 to AdaptBitmaps, then on launching Phoenix an adaptation of the internal colour resources to the graphics card hardware being used will be performed. This does, however, take a bit of time. If you use NVDI as driver software for your graphics card, such adaptation is normally not necessary. If the Phoenix operating elements look strange after the launch of the program, then it is imperative that you set this value to 1.

-------------------------------cut-------------------------------

YHM. Basically, it seems all the ^Z and ^Y shortcus are OK, but
those with ALT in both menus and dialogs are transposed!

I suppose, the reason is the different way to recognise shortcuts with
Control- and Alternate-Key. A letter-key in combination with Control has a
ASCII-Code. A letter-key combined with Alternate has no ASCII-code. In case
of Alternate the program has to use  the scan-codes for the recognition of
the pressed key. While the the ASCII-Codes a independent of the hardware
the scan-codes are not. The scan-code discribes the hardware.

Gru�,
Karsten

Hello,

I think about to produce a new batch of CT63 (30 units).
Actually I wait for some answers from factories, assembler and
distributors to check if it is possible a same price (320 EUR).

I will inform you nextly.

Regards

Great news.

The CT63 can fit inside a standard falcon case? (with an external ATX
power supply)

I plan also to fit CT63 to standard case (when I get mine :))!

at minibox.com you can buy this picoPSU...

and you can also take a look at DHS bbs - there is lot of information.

They are made by Czuba Tech. They do them in batches. You can get online a
their website and leave email for Rudolph. I know when I finally get the one I
ordered, I am going to put myself down for another one.

That is great. Eventhough I have one ordered, I would love to have another one as a backup....

Great news Rodolphe!

But.. for us current owners.. what about the CTPCI??

Thanks!

Yes, they told me they pretty much stopped doing component repairs due
to scarceness of parts, and that any repairs done would start at $300.00.

I am in contact with Wizztronics, all I have to do is pack up my Falcon
sysboard and send it to them.

Sam, have you tried Alex Yu at ATY Computers? He's done a lot of work for
me and the prices were very reasonable.

If it wasn't for the CT60, I wouldn't have returned to the platform. I
wouldn't have learned how to use Unix stuff, I wouldn't have learned
the C programming language, in fact I would most probably never have
returned to programming at all.

It's worth every penny. I'd pay twice the price, even. Get one and
live happily forever after. You owe it to your Atari.

Ronald,

Yeah, but they told me "Because of the type of motherboard (SMT) we do not repair any Falcon Computers / Falcon motherboards Sam. You might try Steve at Wizztronics".

So that's what I'm going to do. Wiztronics said that they've also installed/repaired CT60s, so that's a definite plus.

Might cost more to repair than sending it to Rodolphe, but it pretty much works out the same due to the costs of round trip shipping to France.

Back up and running folks. I finally got another Lantronix box in. They no longer make the UDS10, so I had to get the 1100. Happily, I can report that it seems to function indentically to the UDS10, at least as far as working with my BBS goes.

Apologies for taking so long, and many thanks to all our patient callers.

The Fuji Lives! :)

Hello all!

Nice to see this group is still active.

I've been away for quite some time, but decided to pop in and see if anyone wants to buy my Falcon030 that has the Nemesis accelerator installed (the installation was performed by Alex at ATY Computer).

The Falcon has 14MB RAM, and no hard drive. It had all the "Cubase Audio modifications" performed on it back in the day. I am the original owner, and it served me well for many years (it was a mainstay in my recording studio for quite some time).

The only issue is... I believe the power supply may be failing, because it doesn't always power on, but when it does, all is OK.

I'm not sure what to ask for it, but will consider offers. If there's no interest, I guess ebay will be the way to go.

Thanks for reading.

It's probably been asked before but what is the maximum screen
resolution/colours can be achieved with this setup or can you add
something else. (to still fit in the case though)?

CT63 i think is just plug and play, i.e. no soldering required.

CT60 is plug and solder.

can anyone confirm this

cheers

Depends on what you want to do with the CT60 and your Falcon. It will
work, plug and play. To get the most out of it though, you'll need to do,
or have done, the MB mods.

What I mean is.....do any drivers and such need to be installed for
the CT60 to operate.

I'm trying to determine if my CT60 is dead or my Falcon is screwy,
before I have to send one of both out for repair.

Thanks

Hello samf
  There are drivers if you are working with Magic. I can think of about 5 things that need to be installed if you are using Magic. TOS I believe does not need anything but you do need to have NVDI installed and there is a small program that I have installed into my auto folder which is 440 bytes. This supposedly shuts the BLITTER off and goes to NVDI folder (which you must create) to load in the actual NVDI.PRG then it turns the BLITTER back on. I found it in an early version of the CT60 software and my computer became VERY STABLE after doing that as well. We really need to hook up and make sure that you have everything setup properly before just handing your Falcon over. Now if you want a 25 mhz. system bus for the Falcon then you would need to do the soldering (although it is not necessary. But there are several other mods that need to be done to the CT60 and or Falcon to make it the most optimum setup. Let me know if you wish to talk in real life or get in touch via instant messaging to get this sorted out. I can send you all the most recent files or you can go to Didier's web page and download them from there as well. Although NVDI 440 byte program is not in the most recent distribution. I can definetly send you that file for sure.

Thanks,
Falcon060

Both ct60 and ct63 are plug and play. No additional soldering is
_required_ -- however, ct60 gives you a possibility to install bus
speeder what requires some soldering (a few wires).

> installed and there is a small program that I have installed into my
> auto folder which is 440 bytes.  This supposedly shuts the BLITTER off
> and goes to NVDI folder (which you must create) to load in the actual
> NVDI.PRG then it turns the BLITTER back on.  I found it in an early
this is absolutely unnecessary -- NVDI replaces original (blitter-
based) VDI calls so Blitter isn't used in TOS at all. There's no point
to do such strange thing, just load NVDI.PRG, that's it.

Seems funny that my system became more stable on bootup after doing
this!  I take it away and I get a bomb when NVDI tries to load.
Explain that one away.

Anyone have an interest in this? Was pulled from a working Mega 2 system. Here are the specs:

Image Systems Corp Multi-Sync video board made in the USA and its model number is: ATR-4CP REV. A3. Taken from the web, this board is for use with VGA or Multi-Sync monitors. It offers Moniterm compatibility and as is supposed to be compatible with the other Atari ST screen modes. This board also has a 68881 co-processor socket (no chip installed), 384mb of ram, 1024x768 resolution and is blitter chip supported.

Not sure what to ask. Guess it was sold for $800 when new in the early

90's. E-mail directly with any offers please.

```

Another working part from a Mega 2 system. This board plugs
into the CPU slot and includes a 16mhz 68000 chip.

Again, not sure what it's worth, so if interested, please
e-mail directly your offer.

```

I'd recommend to backup whole boot partition, install hd driver + NVDI
only. I'm pretty sure there's something bad in your setup... Or maybe
-- what version of NVDI do you use? Mine is 5.01 so there could be
some different behaviour.

I have this system working for 4-5 years why would I change it now???
It works, so as I always say if it is not broke don't mess with it. I
also have NVDI 5.01 and I also have a multi boot system thanks to
Xboot. I run TOS, Magic (with Jinnee 2.5) and Mint (with Jinnee
2.5). All runs well and the system is very stable at 98.5 mhz +. At
this point I see no need to go and mess with anything. I do have a
backup of the boot partition as well as all my other data.

Hi, just out of curiosity, where are you located, how much was the round trip shipping? If it comes to it, I may have to the same. I've already sent him Rodolphe an email explaining my problem, he just may tell me to ship it to him.

When you shipped yours, I assume that you shipped him your Falcon motherboard, with the CT60. Did you leave the CT60 attached or no? How did you pack it?

Please let me know if I'm becoming bothersome. I don't want to become
persona non grata here as well.

Thanks!

Haha! Isn't his choice of nickname pretty ironic? He calls himself
"vulgar" which turns out to descrive his personality as well ;-)
I hope someone gets hold of this crook. The Atari community in Poland
can't be that big -someone over there is bound to know the guy.

Hello samf,

I am located in USA, Ohio to be a little more precise. Gosh I have looked everywhere and I cannot seem to find it anywhere. It seems like it was around $45 dollars each direction. But do not quote me on that. Not to mention it was some 4 or 5 years ago now. Let me also tell you a little story. My Falcon went down in February, March time frame. To no fault of Rodolphe it took till end of August to get it back. Reason was because I declared a value of 1000 dollars over in Europe they wanted to collect VAT Taxes on 1000 dollars which was outrageously high. Some 200-250 dollars if I remember correctly. So I am telling you DO NOT INSURE it and DO NOT DECLARE A VALUE. If you do they will do the same thing to you that they did to me. And trust me it was HELL trying to get my Falcon back. Then I had to pay to receive it back and ship it out again. Course you will not have all that expense. But as I stated before it still seems like it was around 100 dollars or less to ship both directions. Not to mention you have to put money in the box for the repairs as well. His work is A+++++++ quality. He guarantees success and mine worked as soon as I received mine back the second time. The return shipment took over 12 weeks to get it back because the damn shipping company was waiting for the cargo ship to be full before it sent it over to the USA. To be honest I am very surprised I was ever able to track down the company that handled the shipment over there and was able to get my ole bird back.

I shipped the Falcon MOBO and the CT60 for sure. Ask Rodolphe, I cannot remember if he wanted the SDRAM memory and the STRAM memory and module as well. If I had to include all of that I am sure that I bubble wrapped everything individually. That is the way I ship anything when it comes to computer hardware. Otherwise you run the risk of maybe the CT60 or memory modules coming off during shipping and scratching all over the Falcon MOBO. So get a box at least 2 inches bigger in all directions and several inches thicker than the the Falcon MOBO. Put 2 inches of popcorn material in the bottom or better yet that sturdy foam packaging material. Then bubble wrap CT60 and Falcon MOBO and memory modules if needed individually. Wrap them at least 3 layers or more. Then top off with popcorns all around. Something I always do is put more in the box than will actually fit. As you close the flaps slightly press down (I dont put like 3 or 4 inches above the box, something like maybe an inch.) and this will ensure that nothing will be able to move or shift during the shipping. Obviously, the way I pack things is open to discussion by everyone. But, it was obviously good packaging that I had done, because it went to Europe twice and came back twice and was actually shipped to me from a friend in Holland some 8 years ago. If you have anymore questions do not hesitate to ask. I really hate to have a fellow Atarian go through the same pain I went through and be without there Atari for 6 months when it could be more like 3 months or less.

As a coincidence, I've just had that same message after changing a setting in the CT60 CPX. After rebooting, the Falcon wouldn't start (white screen with the two first lines of the boot sequence at the top) and after a reset the screen would display "out of range". Out of ideas, I rebooted in 030 mode and fiddle with some settings in the CPX and now it works again. Can't explain it.

Hello everyone,

I certianly can go through my settings in the CT60 CPX. What I have setup has been rock solid for me for 4+ years now. I have run multiple OS'es thanks to Coda from Europe. those OS'es include TOS (naturally), Magic (ran this OS for years) and now just recently in the last 8 months or so I have started using MINT. All run rock solid with these settings in my CPX. I also have obtained speeds of 99-100 mhz with the stock CT60 cooler. Although I mostly run it between 97-98 mhz for everyday use. So here goes and I hope this helps someone. If you are experiencing issues as Jean said try and get the Falcon to boot into 030 mode this may help. Dont forget to save your settings before trying to reboot.

Under Memory:
FPU: YES of course just leave the FPU on.
Speed slider if you have CTCM or adjustable clock speed. If you are having boot issues you could have the clock slider set way to high. Of course in 030 mode this slider may not be present (cant remember been years since I have booted into 030 mode). If so, I have heard of a way of resetting the CPX so that it starts out at a barebones setting that is much lower and allows boot to be possible. But for the life of me I cannot remember how to do it. As I have said before I have not had any issues in YEARS so I dont play around with what is working.

Under Boot:
IDE-1 -> SCSI 0-7
OS has just a dash (-)
SCSI arbitration YES
ID 7
Delay = 0 s
Blitter FAST
TOS in RAM YES
TOS NORMAL
boot.log WITHOUT

Under Stop:
Stop programmed WITHOUT
at 00:00
Beep Alarm: YES

Under Language:
Set these according to your likings and nationality

Under Video:
Video VGA
mode PAL for me but Eurpeons might need NTSC do what is necessary for your setup.
Resolution 640X480 of course I have centscreen now working at 800x608
Colors 256

In my experience if you dont get something right on the BOOT or VIDEO areas of the CT60 CPX you may experience issues during the boot process. Try these settings at your own risk. I make NO claim that these will work perfectly for your system. It all depends on the type of setup you are using. Hope this helps someone out there and I would love to hear feedback from anyone that found this information useful.

Well...I'm a happy camper now!! I took my Falcon out of it's tower case, attached the psu, power switch, floppy and hdd, lo and behold...it now works!!

The only I don't understand, the only way it works is if I jumper the 2 'CT60' pins....which the folks over at DHS said I should not do, go figure!

So this weekend I'll be reinstalling Magic, then maybe Mint for hopefully dual boot....yipee! I've been fighting with it all week long, drove the guys at DHS nuts!! They even got a bit ticked because I was asking so many questions.

Have a great day! :)

That would be great, but ask him. I only need a more more extended. I have
most of them covered. Late me know... Thanks....

Rory would be the man. I bought mine from him on Ebay late last year. Nice
little device. I hope to use it when I get my CT63.

Possibly. I have Screenblaster II and it does a fair job of giving me a 800x600 environment. I am hoping with the 512meg of Ram in the CT63, SBII will give 1024x768 setup. But all that will be moot when the PCI upgrade for the CT63 comes out. Didier M. has a driver for a video card that is MUCH better than the one I had in my Hades.

Yes I can agree there Lonnie. The Hades motherboard has 4 layers, so repairing
it would be a nightmare.

Greetings,

Got a few questions if anyone is still around that could help with them.

TOS 4.02

It's been awhile since I have looked at the differences between TOS 4.02 and

TOS 4.04.

Most of my working Atari Falcons came with TOS 4.04, but I acquired a CT2B Falcon,
a really nice one with Centek Memory and all, really upgraded nice and seems to work just
fine, BUT it has TOS 4.02!

Which seems abit odd, It probably doesn't matter when using the Falcon in the CT2B mode,
but not really sure on that.

I know TOS 4.02 had a few bugs, but don't recall what they all were, can someone list them?
And any Auto Program Fixes that would be necessary for bug free operation?

Also, anyone know if the bug fixes for TOS 4.02 are necessary when using the Falcon in CT2B mode?

Another question regarding bug fixes for the Atari Falcon....

I recall sometype of bug in early versions of TOS having to do with the amount of Folders/Files that one
could access. IIRC a program called FOLDER100 or similar was used to fix this.

Does this bug exist in TOS 4.02/TOS 4.04? If so, should one use Folder100 or is there another program
for this?

And, is there a FAQ somewhere that lists the bugs and fixes for all versions of TOS?

Thanks for any help.. phantomm@suddenlink.net
.

Hello Sam,

I couldn't resist.

> The only I don't understand, the only way it works is if I jumper the 2
> 'CT60' pins....which the folks over at DHS said I should not do, go figure!
>
You want to say if you connect these 2 pins, your *ct60* is powered
on?

> So this weekend I'll be reinstalling Magic, then maybe Mint for
> hopefully dual boot....yipee!  I've been fighting with it all week long,
> drove the guys at DHS nuts!!  They even got a bit ticked because I was
> asking  so many questions.
>
Hm, Sam, I don't want to see your happiness go away but... are you
sure you're using ct60 and not plain falcon? ;) You know, you mention
to that guys@dhs you don't see SDRAM test and you know why? because
you were in standard, plain, 030 mode.

Hint: If you want to be sure you're working in ct60 mode, you have to
see ct60 logo and SDRAM size (along with ct60 infos at boot time). Not
to mention 25x speedup ;)

Hello all,

I often have problems when starting my FalCT60, from the issue samf
reports to the one that JF reports, among many others.
Most of the time, however, it comes to issues just as that on the
screenshots below :
http://rapidshare.com/files/88355386/Photo001.jpg
http://rapidshare.com/files/88355620/Photo002.jpg
As you can see, though the clock is set to 96 MHz, the SDRAM is
initialized to... over 375 Mo/s!
Being a 100 MHz CPU, running at 96 MHz oughtn't lead to malfunction,
and the memory ought to be initialized at 98~100 Mo/s.
Often, just turning the power off then on again makes it work.
Sometimes, I must repeat this from 2 to 5 times before it finally
works and, more rarely, I must turn the PSU off, then press the
CT60's start button 10~12 times so the capacitors in the PSU are
completely discharged, then turn the PSU on and finally, when I
turn the FalCT60 on, it works.
I just hope it will not damage the computer. :-/

I'm afraid more ram won't change anything. I've got my CT63 now and
though the processing power is amazingly faster than that of a stock
Falcon, there is not much difference regarding screen display.

> But all that will be moot when the PCI
> upgrade for the CT63 comes out. Didier M. has a driver for a video

I would say that the difference should be in the same order of magnitude than between the stock Falcon and the CT63. Imagine that.

Hard to get, those screenshots.

Just a thought: should you be using an alpha release of TOS? this
375Mo/s really looks like a bug in TOS. And have you tried another PSU?

> I just hope it will not damage the computer. :-/

I don't think this should have any impact on the Falcon itself. Now, on
the CT60, that's another story...

JFL

Mikro, after watching the Falcon boot up....I've come to the conclusion
I may have killed my CT60! :(:(

I've already sent an email (acutually 2) to Rodolphe, asking if 1) he
can fix my CT60, or 2) He's got another one he can sell to me.

I am so mad at myself!!!!!!!!!!!!!

On the other hand, I'm happy I didn't kill my Falcon as well!!! :) :)

Samf,
   What leads you to believe that you killed your Falcon??? Have you
installed the CT60 software??? I doubt you have killed it if the
computer boots. It seems if something was wrong with the CT60 and you
were trying to boot in 060 mode it would not allow you to boot up. Let
me know what you are getting and I can help. I hate to see anyone have
to wait for there CT60'ed Falcon as long as I had to wait. 3 months is
way to long for anyone to have to wait. Especially if its something
simple. If you want maybe we can IM in real-time so we can search it

out much quicker for you. Let me know.

Thanks,
Falcon060

Isn't the Eiffel, something like the KeyBoard Gizmo, which allows you to
connect a PC style keyboard,
mouse, along with joystick?

I have one of these, (KeyBoard Gizmo), not used yet. Neat piece of
hardware, especially because it
requires no drivers to use.

The reason I think I killed either my CT60 and/or the cpu, is because I
have to put the jumper on the two 'CT60' pins (which turns off the
ct60)in order for the Falcon too boot. If I take that jumper off, then
the psu powers up, the Falcon does nothing, and the monitor displays the
  Frequency Out of Range message.

Also, some of the Mint files in the auto folder, put up messages stating
'This is not a CT60 Falcon030', or something to that effect.

I appreciate your offer to IM in real time, but after you've read this,
I'm pretty sure you might come up with the same conclusion as I have.
Let me know,

Thanks!

Greetings,

I am looking for information on any current ongoing Atari 8-Bit/ST-Falcon,
CD/Disk based, Magazines and Newsletters.
Printed Magazines and Newsletters.

If anyone knows of any sources in North America or Overseas,
I would like info on how to subscribe, and contact info on the publisher(s).

Also would like to know about how many subscribers/active members if
possible.

Although the Internet is a great tool for information, I still enjoy a good
disk
and paper mag/newsletter. phantomm@suddenlink.net

.

Is there any other Atari Computer related NewsGroups that have more
activity than comp.sys.atari.st?

There use to be alot of activity in here, but now it seems just a few posts
now and then.

Does the lack of activity in here reflect actual Atari ST-Falcon Computer
Users?

If you understand french, there is fr.comp.sys.atari, but you'll have to be strong: some unending wars have started years ago and peace will never come back. Among the shoots, some interesting things...

Guillaume.

There is much more activity today on web forums than on Usenet. I still
prefer Usenet personally, and my ISP does a good job of filtering spam,
but most people seem to prefer web forums nowadays.

Samf,

Although I have never had this issue. I still believe that it can be corrected without going to the extreme of having to send it out to Rodolphe. Do you have your Falcon bus sped up??? Before Rodolphe fixed my Falcon so that it would start up by the Power Supply switch on the back of the Power Supply here is how I started my CT60 without a switch.

Make sure the Power Supply is OFF. Then put a jumper on the two pins below PWR (Power). They should be the two pins furthest to the left. Now turn the power supply ON from the back of the power supply. This should not turn the computer on yet. Now pull the jumper off the pins that you had placed on the pin. This should start the Falcon up. If you receive any of the errors that you have talked about. Frequency out of range and this is not a CT60 Falcon go ahead and hit reset on the back of the falcon until you here the monitor synch up. Are you running Magic or MINT, or do you want to run both??? Was MINT installed using Falcon040 setup?? There is lots to try yet to get the computer working.

Course if you do not have the bus sped up and you are lacking other things that need to be done to both the CT60 and Falcon to make it a more stable machine it may be in your best interest to send it to Rodolphe. Let me know what kind of soldering has been done to your setup.

Ttyl,
Falcon060

Hello Sam,

Before you do anything else, keep in mind that there may be many reasons
that should make it behave this way.
One of these might be the NVRAM, so you ought to check it first, and the
better way would be to set the cpx so as to bypass it.
But I don't think this is the real cause.
Another one could be a dead CTCM - assuming you use one, and not a plain
oscillator -.
On the following picture http://rapidshare.com/files/88630642/CT60.JPG
you can see the DIL module that I outlined with purple, and the CTCM,
that I outlined with magenta (er... not that clever, the way I chosed
the colours, is it ? Anyway... we'll have to do with it...).
If you fitted the CTCM the way you ought have fitted a classic oscillator,
then you killed the CTCM - I did it! and I seem to remember I got this
message when starting the machine -.
As you can see on the picture, the CTCM must be fitted reversed, compared
to a classic oscillator.
You can check this by inserting a classic oscillator into the socket.
Hope this could help.

Regards,

J.-Luc

Hello J.-Luc,

Thanks for you input. Ihave not as yet used the CTCM (very nervous about soldering you see), so that could not be the issue.

I recieved the new cpu with the ctm sometime before last summer. Not having gotten a heatsink/fan combo, and with plans for moving, I had decided to partially disassemble my Falcon for moving.

Then earlier this week, I attaached the atx psu and tried to powerup the Falcon/CT60. Well, of course, you can't power anything up by trying to turn on an atx psu using it's own on/off switch.

That's also when I noticed I had the cpu orientated incorrectly, luckily I caught it before I could power up the Falcon/CT60!

So I orientated the cpu correctly, then momntarily touched a screwdriver to the 2 power pins on the CT60 and.....I got the frequency out of range on the monitor, and nothing happening on the Falcon/CT60. That's when I put a jumper on the 2 CT60 pins (thus turning of the ct600, and that's the only way power will get to my Falcon, and it will power on.

That's why I think I my have killed my CT60...the Falcon only power on when the CT60 is off.

I would truly love for that to not be the case.

Sorry for the extremely long post!

As I wrote in an earlier post, I had *exactly* the same behaviour with
my Falcon and it was just the NVRAM that I had apparently
mis-configured. My Falcon is running fine at 100 Mhz now. Don't jump to
conclusions and reset the NVRAM.

I think Usenet is much better as well.
For me it's much easier and faster to subscribe to a few related Newsgroups
then to search
Web Pages for current discussions and info.

My french isn't really that good, but I'll check it out anyways.
Maybe I can learn a few new words. 8-)
thanks.

Sam,

Set the CT60 off and start the Falcon, then load the control pannel
and go to the video menu, where you can select "replace nvm".
This will overide the NVRAM settings using those of the CT60.
Of course, get ensured that the proper parameters have been set,
such as the OS you wish to run at bootup (if you have MagiC! instal-

led on your disk, just set it as boot OS), aso. Then, save your settings and reboot after enabling the CT60. If it works, then you'll just have to get the NVRAM module replaced by a newer - I suggest you solder a socket, so you can plug the new chip easily -. Just hope this will solve your problem.

Regards,

J.-Luc

The TOS on my Falcon is 4.04 and, anyway, the CT60 uses its own embedded one.

[Le TOS de mon Falcon este un 4.04 et, de toute fa�on, la CT60 utilise
sa propre version]

Problems on power on did kill an Eiffel interface once - the chip didn't
appreciate the bounces -, so this could happen with other components
as well. :-/
Well, it's late and my girlfriend is waiting for me. So goodnight.

[Des probl�mes lors de la mise sous tension m'ont d�j� co�t� une interface
Eiffel, dont le CI n'a pas appr�ci� les rebonds ; cela pourrait donc arriver
avec d'autres composants.
Il se fait tard � pr�sent, et ma copine m'attend. Bonne nuit donc.]

I think my English is acceptable so I hardly see the point.

What I meant is that *getting* to them is hard. The web site itself is a
mess. It's not your fault, I know. There is nothing wrong with your
pictures.

>> Just a thought: should you be using an alpha release of TOS? this

That's the one I'm talking about, obviously. It's an alpha release. It
may not be bug-free. This might explain the strange 375MO/s display.

Hi,

There's a new 0.9.6beta2 release of ARAnyM <http://aranym.org/>,
so the *Mini Pack* <http://eureka.atari.org/MacAranym.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on MacIntel with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy =3D)

Hello,

there is a new version form SuJi:

- Search for folders (as well as files).
- No more problems with memory protection under FreeMiNT.
- If the TOS cannot produce extended objects (checkboxes) then
  these will be created by SuJi.
- GEMScript support for the following commands:
    - AppGetLongName()      Returns "SuJi"
    - Copy()                List -> Clipboard
    - Quit()                Exit SuJi
    - ToFront()             Top SuJi window
- More flexible output to the clipboard

Thanks.

There seems to be a small problem. In the date window "Control L" (Fetch filename/Dateiname holen) should call the fileselector but this doesn't happen at all.

The same problem occurs with other short cuts too.
e.g. ALT Z and ALT A (in menu actions)

It did work with the original German version.

TTFN,
Martin

I need to correct myself. ALT Z and ALT A doesn't work with the orginal
German version (5.0) either.
In version 5.0 [ALT A] calls the ProzessList which is strange because it
should be [ALT Q] according to the menu.

btw: I'm doing this under MagiCMac 5.6.2

HTH,
Martin

It's probably me but anyways here goes. I've been able to partition my hdd, HDDriver sees all the partitions except...when I tell it to copy Hddriver.prg it the only partitions it brings up to select from are d,e, and f.

I've read all through the manual, and I just can't figure out what's happening?

Also, I do I adapt a newer floppy drive to the Falcon?

Thanks!!

Please check whether the size of your C: partition is legal for your
version of TOS. For TOS 1.0x 256 MB is the upper limit, for TOS
2.0x/3.0x it's 512 MB and for TOS 4.0x it's 1 GB.

Ah! That may be the problem...I was partioning a 4gig hdd into 4 equal partitions...ending up with 1031.7 per partition.

Thanks Uwe! :)

Hello all,

Received an email last week that my CT63 will finally be coming. That is great news for me as I was so used to the speed and memory of the Hades060. I just need the CTPCI upgrade and then my system will be complete. I still have to put my Falcon motherboard in my old Hades tower. I have mostly everything I need to extend the ports and such. I am still looking for some kin of plastic part to use to install Effiel Interface I got from Rory of SCAT. Any ideas??

Ron Hall sent me an email and it had some pictures of someone who just attached a batter to the clock chip without no drilling away of the chip. That seems fessible, but I could not tell which pins he soldered them too.

I don't recommend this, as having an old battery (the one in the chip)
in the works can cause headaches. While I don't doubt an additional
battery will work for a while (when the internal battery is just low),

a dead battery linked in parallel with a good battery creates added resistance as the good battery is constantly trying to recharge the old one.

Best wishes to you as well!

As I pass my 20th year with an Atari ST in the house, I am reminded that good food, good companionship, and mental stimulation matter much more in life than having the latest niceties. Here's to another year of dabbling with a soldering iron and playing Sundog.

Galen

And Dungeon Master, and any Ultima, and, and and... lol

Best wishes to everyone as well!

PS Edward, don't feel bad, I had to work New Years eve as well, 12 hour
nightshifts - at least its time and a half with another day off. :)

Yep, I sent Edward that pic to give him some ideas - but for myself, I had
Alex at ATY Computers put a socket in my Falcon, and bought 2 clock chips
from Brad at Best Electronics. That way, next time, I just plug it in

myself... :)

PS Didn't look like it was that hard a job to do myself, but with Falcon
MBs as scarce as they are...didn't want to take a chance.

Hello. An old Atari MIDI head here.

I am in the process of cleaning my basement. I have a boatload of old ST stuff. 4 computers... I need to set them up to be sure what has what but at least one has an upgraded (16mhz) processor and I think all have 4megs. 3 SM124's, 1 SM1224, boxes of disks, a tweety board, a pc-ditto, 2 sh204 hd's a megafile hd, and a board with an ICD SCSI plus, ps and hd attached, a (RARE lol) Atari CDAR (CD-Rom drive), 3 external floppy's (not sure offhand whether single or double sided), a Hybrid Arts SMPTEmate Plus, mice, cables, and who knows what all else.

Lots of the disks are commercial games and apps, lots are PD and/or Mag disks, the Crawly Crypt Vol 1 CD and Walnut Creek Gemini CD.

When last run (a few years ago), all of it worked so it all still should but I plan to test it if there is any interest. Right now, my preference would be pickup (i.e. no shipping.) I'm in Maryland, USA. What say y'all? Any interest?

Ed

I would be interested in the a tweety board but as I am in Australia you
would have to post it which I would be happy to pay for. I want one of these
boards for some experimentation! Let me know what you think.

Hello,

Just a small message to tell I built SDL 1.2.13 for Atari. I did not have time to make any improvements to it from 1.2.12, so there are only general bugfixes, not Atari specific.

Hopefully someone can help

I'm in the process of backing my ST disks up to my PC. I've been teying to copy the files from the Discovery Pack Language Disk & I was wondering if anyone knows if there is anywhere I can download a copy of either a disk image for an emulator, or an archive of the files.

Thanks.

Jonathan

Doc. I can put the BBS back up at anytime. I just had some problems that

caused me to shut it down. If anyone still is interested. I can put it back
up. I have a full DVD online full of Atari St software.

Yeah probably digging out the old battery would be best. I remember going to
website that showed how to do it, but I cannot find it now. Anyone know where
it is?

Bonsoir :)

Download on my homepage or directly in the folder
http://rajah.atari.org/files/ -> kkcmd10_uk.zip (84KB)

This program is derived from Litchi, for local usage. It's a Total Commander mock-up that can be used as an alternative desktop for Atari ST old systems. GEM only, with (trying to) convenient keyboard navigation. since 320*200 screen rezolution and 1 MB RAM.

- copy/move/delete for files and folders
- basic launcher
- two windows display

GFA source is provided, if you can to recompile it for MiNT MP compatible GFA Lib.

Voil�

PS: do not ask me about the name of the program. it's a private joke on ircnet #atari.fr, rather scatologic... sorry about that.

They are an excellent monitor and  as I recall,   Sony built them.
They are fairly rare.  I have one, or maybe two in my collection.

Hi.

Do you have the manual for this monitor? I need it for my webpage
http://x-com.atari.org/

Ciao, Bernd

I have one too. even modded mine to use a 1.44 floppy a decade back or so.

Yes, they are rare, they didnt make very many of them if i recall.

Sorry but I bought it used and never had a manual for my PS3000.

You have a very good Atari Web site. Wish I could read German better.

Hi,

After 18 months of experience on Coldfire M5484LITE board where the TOS, MyAES and MINT works under a Radeon PCI board, the idea is to use the lastest Freescale M54455EVB board for accelerate the Coldfire migration:

http://www.freescale.com/webapp/sps/site/prod_summary.jsp?code=M54455EVB
&fsrch=1

It's a complete board with a mini-ATX box who use u-boot for start Linux under the latest Feescale Coldfire:

- Freescale MCF54455 ColdFire microprocessor
- DDR2 SDRAM (256 MByte)
- Two NOR flash memory devices (16 MByte, 512 KByte)
- Serial flash
- U-Boot bootloader
- MRAM (512 KByte, accessible through FPGA Flexbus interface)
- Four PCI slots
- Two-port Ethernet interface 40-pin
- ATA connector
- Audio interface (I2S mode of SSI module connected to audio codec)
- Multiple USB interface options

    - o FS/LS Host via on-chip transceiver with host support (Type A receptacle)
    - o HS/FS/LS dual-role via external ULPI PHY (Mini-AB receptacle)
- Two RS232 serial ports (RS232 transceivers on UART0 & UART1)
- One USB serial port (UART0 serial converted to USB converted on UART0)
- Built-in P&E Micro USB Multilink debug interface
- Standard 26-pin BDM header
- Serial interface header for access to timers, interrupts, DSPI, I2C, and more
- Clock generation logic adjustable via I2C
- LEDs and 7-segment display programmable via CPLD and FPGA

It's possible without lot of work (one or two months) to rebuild a Coldfire TOS 4.04 (like here http://ctpci.atari.org) for get an Atari clone (a base of work) booting under a Radeon PCI board.

The coldfire MCF54455 V4m at 266 MHz is faster than the MCF5484, like the v4e has an MMU but _NO_ FPU (look at Kronos capture here http://ctpci.atari.org).

But there are some advantages like USB host, ATA 6 Ultra DMA Interface, I2S sound port.

There are also 2 Ethernet ports, 2 serials port and a 3rd serial port in 5V who can use the original Eiffel interface with just a cable or a why not TT keyboard.

In a 1st time use host USB is another story, but Eiffel exists for mouse and keyboard.

Actually the TOS 4.04 for the Coldfire not need external driver for get drives on CompactFlash, so it's easy to get ATA working with the same method.

The SCSIDRV protocol is also implemented under TOS but not tested because a CompactFlash cannot replace a DVD drive with Extendos.

There are also an lwIP Ethernet stack under TOS who works fine (TOS GlueSTick, TFTP / HTTP / FTP servers, and also a VNC server unfinished), where I need just to update the Fast Ethernet Controler file for this new Coldfire.

If some peoples are interrested by this project or has some questions, please contact me :

a * n * i * p * l * a * y * AT * w * a * n * a * d * o * o * POINT * f * r

Sorry I hate spams !

It's a great complete development board !

PS. thanks also to Olivier Landemarre for his Coldfire MyAes port.

Hello,

In the past year I have been limiting the number of machines that I have setup in my office. Mostly due to space considerations. Currently I do not have an Atari computer setup anymore. I�d like to still be able to mess around on the Atari platform but having an Atari setup is not possible at the moment.

What I�d like to do is setup an Atari system in a virtual machine (emulated) that can handle networking. What I have read that ARANYM and MagiCMac (OS9) can do networking possibly there are others but I have not researched it much in over a year. I have Gemulator, MagiCMac, and MagiCPC. My version of MagiCMac does have MacTCP-Connect but one of the files is corrupt so I can not get it to work. I contacted ASH Tech Support but they claim not to support MacTCP-Connect because it is not a shipping product anymore.

My main platform is an Apple Mac G5 PowerMac running OSX 10.4.11. I do have a Windows XP and another Mac G4-500 running OS9.22 and OSX 10.4.11 setup at the current time. I no longer have a Linux machine setup but I could set one up as a last resort but I�d prefer to use OSX, XP, or OS9 in that order to accomplish what I want to do. I do like MagiC over MINT but I am not opposed to using MINT if that�s the only thing that will work.

Has anybody setup an emulated Atari machine and gotten networking and TCP/IP working? If so what emulator did you use and what is your experience with the Emulator?   How tough was it to get setup and how does it work for you and your apps? Please share your experiences here for everyone to enjoy and learn from.

Thanks

On 12th January 2008 Edward S.Baiz Jr. wrote :-

>Yeah probably digging out the old battery would be best. I remember going
>to website that showed how to do it, but I cannot find it now. Anyone know
>where it is?

I do not know what that website was,but I wrote up a section in the LAMMI files a long time back for the Zetnet Atarians on how to do the job.

If you do a Google search for Lammi Files , then you should find the details under :-

[Zetnet Atarians] Happy New Year to You All & Data Files.

I replaced the clock battery in one Falcon by cutting off the top of the chip as described in my article in the LAMMI Data Files.

Two other Falcons had the solid chip where cutting off the top was not an option. Knowing that some old circuit boards can sometimes shed their copper tracks when resoldering, I was not prepared to take the risk of desoldering and removing the old chip,and perhaps damaging the mother board.

In these cases :-

First I laid a small strip of thick tape down to mask the diode close to the chip. Don't forget to put a black dab of ink on the board to remind you of the correct orientation of the original chip.

Next using a high speed mini drill (as used by model makers) fitted with a tiny cutting disk, I cut through the legs of the chip just below the bend where they enter the body of the chip. That done the old chip may be lifted away. Next clean up any of the fine metal dust .

Take the new chip and using a straight hard edge, bend each row of legs outwards by just a fraction of a degree. Next carefully bend the bottom section of the legs (the part that normally goes through the circuit board) out at 90 degs . You will need then to snip off those bent out lower parts that would otherwise make contact with that diode that you previously masked off.

Now you should be able to slide the new chip over the upright remains of the legs of the old chip that are now sticking out of the board in two neat rows.

Press the new chip down firmly and using a fine bladed screwdriver gently push each of the new chip contacts against the old ones.

All then that needs to be done is by using a very fine tipped soldering iron and fine soldering wire (I used 0.81mm wire) to solder each new leg in place to the old one. Solder each leg quite quickly as you don't want to risk melting any solder on the underside of the board. If a leg fails to solder properly first time, then leave it to cool and come back to it later.

Use a magnifying glass to make sure that there are no sneaky little solder bridges between adjacent legs.

That done all you need is to remove the masking tape from the diode that is alongside the chip.

Your clock should now be set up for another 5 - 10 years.

On the two Falcons that I repaired this way,both had to be reset on boot up for keyboard language and screen resolution using an appropriate program. I think that it was BOOTCONFIG.PRG that I used.

I hope that helps ,bearing in mind that any repair or modification on an old computer can be risky. Beware of static so best done on a damp day, and also check that the business end of the soldering iron is earthed.

Paul.

Hi

That looks very interesting :-)

Keep up the good work, I'm hoping this will someday make it out of the testing phase.

regards

Thomas

In yesterday's post in inquiring about other users efforts in getting networking going with Atari Emulation I mentioned that a program was corrupt in my MagiCMac Mac Connect programs. The program that appears to be corrupt is MacSTip. Mac OS 9 thinks it is a Text file. I fired up my old Mac 9500MP this morning long enough to find out which program it was. The system was acting flakey and now will no longer boot. Not a total loss if I have to format the drive I'd like to do a fresh install of Mac OS and MaciCMac anyway.

Can anybody please .SIT (Stuffit compress) MacSTip and E-mail it to me or point me in the proper direction on where to get it?

Thanks

Hi Didier,
price of M54455EVB board is 850$? Right?
It's a little bit expensive?!

I see that there some PowerPC boards for Amiga OS 4.0 but they are
also expensive, more that 400euro...

Anyway, if it will be full TOS/GEM compatible solution than it is
worth every cent! :)

Actually, it's not a board, it's a complete computer. And compared with the other ColdFire solutions (which are only devel boards) it's pretty cheap -- and faster. If I was not waiting for the postman to bring me a Falcon CT63, I would buy one.

If this project ever comes to fruition, then I would most probably by
one, of course I'd have to sell my Falcon to do so......or win the
lottery!!  :)

I have followed this project with great interest, and it would be really fun to get involved in it. Unfortunately I don't have much time for this hobby anymore - work, kids and renovating a house occupies all my time. Hopefully I'll have some time to contribute later.

I'm just finishing off the translation of the remaining Alerts in the designer and manager.rsc files for the above, but there are a few that I can't make sense of. Particularly "Bericht" and "Report", as I have the same translation for both!

Anyway, if anyone can help, please?

> Particularly "Bericht" and "Report", as I have
> the same translation for both!

You have the same translation for both because the sense of both is the same (or almost the same). There are these two words because there are two different functions, that needed a name. "Report" is the old function, more like an ASCII-file. "Bericht" appeared in the latest versions of Phoenix and have more grafic possibilities. For the translation of Phoenix to english you have to find a new word for the second type of Report.

> Datenbanken oder Tabellen von|Bericht- oder Report-Definition|und
> ausgew�hlten Datens�tzen stimmen|nicht �berein!

Shit! Its difficult to understand for a native speaker as well! I think, the sense is: "there is a difference between the database/table of the report and the table, the record is from."

> Report '%s'|nicht gefunden!

Report "" not found

> Bericht '%s'|nicht gefunden!

Report "" not found ;-)

> Eingangsrechnung '%s'|nicht gefunden!

"Eingangsrechnung" ist a calculation, that is automatically done, when the dialoge is opened.

> Ausgangsrechnung '%s'|nicht gefunden!

"Ausgangsrechnung" is a calculation, that is automatically done when You click "OK" and quit the dialoge.

> Verkn�fungsobjekte 'Verkn�pfen von'|oder 'Verkn�pfen nach' nicht
> gefunden!|Untermaske wird nicht erzeugt!

Another really dificult term. Maybe something like "Link 'linking from' or 'linking to' not found! Sub-mask not created!".

Gru�,
Karsten

What do you recommend to use as a boot selector?

So far I've used Superboot, but it has a few shortcomings:
- can't handle CPX modules properly (disabling them means renaming them with an X at the end!!!)
-cumbersome to set up/configure
Other than that it's surprisingly versatile if you look past the ugly, old-fashioned text-only user interface.

Looking back I had a lot of hope in McBoot by John McLoud. I even got free registration keys from his website several years ago (2001?).
Alas the website (http://www.the-mclouds.de/software.html) isn't up any longer.
McBoot seems interesting. Alas there's no English language RSC file available -actually there's no RSC file at all, or I'd translate it myself.

So what else is there which is freely available, or available at all?

Visit my website: topic Multiple booting

I'll provide a tailer made version if you like the idee.

Subject: MANY New Commodore Related Video Interviews

---=
=AD-----

Thanks to Robert Bernardo's video work and 1.5 solid days of editing and converting by www.commodore.ca, we now have a substantial amount of video content posted from the Computer History Museum's: Impact of the Commodore 64.

Note that many of these files are large and we only have a limited amount of bandwidth. As such I recommend that you RIGHT CLICK ON THE APPROPRIATE LINK AND SELECT "SAVE TARGET AS" to download the files to your computer rather than having them run through your browser

http://www.commodore.ca/gallery/video/video.htm

Bil Herd - Commodore C128, Plus/4, Early Days
Bil Herd - Everyone Worked for Jack Tramiel
Bill Lowe - Father of the IBM PC
Jack Tramiel - Atari Deal, Amiga Chips, Irving Gould
Jack Tramiel - MOS Technology was Critical
Jack Tramiel - Commodore History His Own Words
Jack Tramiel - Commodore History - Interview
Steve Wozniak - Tries to Sell Apple to Commodore

NOTE: In a few weeks/months I will re-sort these
videos into the appropriate sections of our video page.

Hi All,

I'm in bit of a bind. I've recased my Falcon in a big tower case, but
now I need to extend all the ports except for 1 enhanced joystic port,
the headphone/mic ports, cartridge port, or midi ports.

I need the following port extenders:

1 Enhanced Joystick Port
1 Paralled Printer Port
1 Serial Port
1 DSP Port
1 Falcon to VGA Port
1 MegaST Keyboard Adapter (apprx. 12" long so I can take it out to the
back plane)

I'm willing to pay for the work, provided the charge is reasonable,
and, of course, the port extenders work.

If there are any offers please email me;
atarinut365@gmail.com

Thanks and have a great day everybody!

Hex editor, or use eed from www.rgfsoft.com which DDP Translations
use(d) for these compiled text-type programs. It extracts the ASCII
which you translate, then it replaces the original in the binary with
your version. Of course, that cannot be longer, but there's not usually

any problem with German-English.

Ouch, that's what I thought, and so did Peter West.

> For the translation of Phoenix to
> english you have to find a new word for the second type of Report.

I found the printed manual that Dennis Vermeire sent me 5 years ago
when we first started this project. I can't remember why it didn't get
finished, may be there was a loss of contact with the author. Anyway,
it's described on page 25 as a report that is suitable for output to
screen or printer, so something like Rich Report or something similar
might work.

>> Bericht '%s'|nicht gefunden!
>

Aha, that will change what I had prepared for this, along with
Ausgangsrechnung. Makes sense now, thanks to you.

A good look at the manual will help I hope, something to do at the club
tonight :-) Never was much good at databases, I must say!

Thanks for your assistance Karsten!

MI5 Persecution: Molestation. during Travel

MI5s persecution of me varies in intensity. Since 1990 it has been. steady for perhaps 80% of the time; there was a notable quiet period in. 1993, and another quiet period in Jan-Feb 1995, as well. as a hiatus in the first two months. of 1999. It puzzles me that they cease and restart, seemingly without any logic or reason. But one aspect. of MI5s activities against me which is relatively predictable is. this weeks articles topic, which is Molestation during Travel. Almost every time I. cross the Atlantic, go to the Continent or even try. to enjoy a holiday in this country, you can bet that MI5 will be there doing. their utmost to wreck it all.

This aspect of the harassment is particularly relevant as I. will be travelling to Europe again in a months. time, with naturally the Minidisc recorder in tow; so it will be interesting to see if I can. record the abuse which will almost certainly take place, either. on the Tube going to the airport, at the airport,. on the flight, in the terminal building - MI5 have previously instituted instances of abuse at each of these. locations, so well see how much taxpayers money they waste this time, and whether. it will prove possible to capture their abuse on. minidisc.

Read. about the MI5 Persecution on the Web

June 1992 in. Polands mountain resort of Zakopane

The persecution started in June. 1990, and for the first two years I stayed in the UK apart from a couple of brief day. trips to Calais. By the summer of 1992 Id had enough of being. cooped up in England with abusive fellow employees egged on by an abusive. secret police service, and decided to spend. 10 days in southern Poland, on what was intended to be a holiday at the mountain. resort town of Zakopane.

Unfortunately the psychopaths of the. Security Service were not willing to allow me to enjoy a holiday in peace and quiet. The journey. to Zakopane was by coach from the meeting point at Londons Victoria coach. station (National Express) followed by ferry followed by another. coach across Europe. As we left Victoria. a youth and his girlfriend started a loud tirade of abuse directed at "this bloke", where the "bloke" was. never named, but it was very clear. that the "bloke" was myself. The youth said "they" had "found somebody from his school, and he was always. really stressed at school, a real psycho". Again, the label "they". was not elaborated on, but it was clear that "they". = the persecutors from MI5. The boy. also said, "he was in a bed and breakfast for only one night and they got him". By a. not unexpected coincidence I had been in a B&B in Oxford. a week previously, which had been booked from work; other things lead me to the conclusion that the company's offices were. bugged for most of the 2 1/2 years that I was there, so "they" would have known a. room in the B&B had been booked. After a few minutes of this I went back to. where they were sitting and asked. where they were travelling. The boy named a village in France, and the girl's giggling suddenly. ceased; presumably it permeated to her brain cell what the. purpose of the boy's abuse was.

It is now very clear to me that MI5 were trying to. have me incarcerated, assaulted or killed on this trip across. Europe. The degree of verbal violence inescapably leads to this conclusion. When we. arrived at our destination, it became clear that many people, both in our tour. group and its guide, and. among the ordinary residents of the town, knew there was a movement under way to "get" me. MI5 employed many people. and significant resources for an action which they knew would only. take a maximum of ten days.. A commercial operation would never have felt able to waste such resources on such an unproductive and temporary. action; only a state-sponsored,. taxpayer-funded entity like the Security Service would be able to. be so wasteful.

To give some examples of what happened in those ten days; I was. walking in some woods outside the town, when a. Polish woman, looking at me, said the English "shit" in a strongly Polish-accented voice. For the. first three years 1990-92. MI5 had been trying to force this word on me. Another example; I was walking near my "hotel" when a mother said laughing to. her child,. "a wiesz ze to prawdziwy wariat" which means "you know hes a real madman". And the "TV reacting". happened there too; on Polish TV, a bemused looking journalist said to. another, "to jest sprawa Anglikow", which means "its the concern. of the English", in other words, none of our business, despite what the English. are trying to force down our throats.

Just before we left for. home, I went with some others from our group to a nearby bar. There a man shouted at me. the same sexual obscenity which MI5 have constantly thrown at me these last. three years. I think MI5 try to justify. their various terms of abuse by repeating them at me until I say them,. either while conscious or while talking in my sleep; and then they seize on my saying those words to "prove" that the. obscenities are "my fault", et. cetera. This rather stupid reasoning of theirs can actually be seen as indicative of the psychopathic condition attributed to them in. a previous. article; blaming the victim for the crime you inflict on him is how psychopaths. think.

Nor did the persecutors let up during. the return trip. Returning on the ferry over the channel, a rather insalubrious-looking guy talked to. his mates about "and you know this. bloke, hes really mad you know, hes really mad". On the National Express return coach to London, a. group of five or six young people started shouting at me. I slumped. in my seat and tried to avoid presenting a target, so they got ever. more strident - "whats the matter with you, cant you hear us?". One of the other people who had been on the trip to Poland asked them why they were. shouting at me, and they said, "hes been to Cambridge", to. which the co-holidayer asked them, "have you been to Cambridge?" presumably thinking they. were aggrieved fellow students, but they answered "no".. Even after I left the coach at Elephant and Castle abuse continued; in the tube station, two kids. started throwing abuse at me;. one of them said to the other, "and you know he works?" to which the other answered. "yes".

Immediate. Aftermath of November 1992

As you will know from previous. articles, my manager at OCG - ARIS/Oxford, Mr Mitchell,. induced a mental breakdown in me in the months leading up to Nov/92. The diagnosis was regarded by. the persecutors as a victory for them,. because few if any people give credence to allegations of harassment when they are made by somebody. suffering from schizophrenia. There is also a bias against the mentally ill, an "institutionalised bigotry". in society comparable to. the institutionalised racism against blacks.

However, MI5. did not let up on persecuting me following Nov/92. In December 1992 I flew. by charter jet to Alicante in Spain for two weeks recuperation. MI5 planted one of their people on the flight, a. youth who tried to start some noises that "hes a. nutter". One of the other passengers replied, "oh hes a nutter is. he? oh well!" and the youth shut up and said nothing. for the rest of the flight. I think it would be fair to say that the youth on the flight was. embarrassed by what he had been asked to do in making the flight "uncomfortable" for me;. he sounded defensive rather than. aggressive.

My. first trip to Canada in June 1993

Ive already covered this in a previous article so Ill just give. a brief summary here. On 10 June 1993 I flew. British Airways from Heathrow to Torontos Pearson Airport. On de-planing. from the aircraft, one of a group of four fellow passengers looked at me and said, laughing,. "if he tries to run away well find him". It was quite obvious. that these four men were the ones who had been. harassing me since 1990.

I did nothing to apprehend them. or bring this incident to the attention of the airport authorities,. mostly because this was my very first visit to Canada, and the last thing. I wanted was to get into a dispute before I had even finished disembarking. In retrospect, I can. see this was a terrible mistake; I. should have made every effort to detain and identify these people.

Subsequently I have made numerous attempts to. obtain the names of these people from British Airways. passenger lists, by talking to BA, through a lawyer in Ontario, through. a solicitor in England, through the UK police, and also through private detectives in the UK. But. all my efforts have come to nothing. BA have told me they keep passenger lists for. a period of seven years, so they will still have the list for this. 1993 flight. I did not see or hear anything during the rest of my visit to Ontario in. 1993 which would have lead me to believe that I was being. watched or followed.

Journey across. Canada in summer 1994

As I think Ive. already said in previous articles I emigrated to Canada in late May 1994. For six weeks. between late May 1994 and early July 1994 I travelled across Canada from coast to coast,. starting in Toronto, visiting various cities and ending up in British Columbia. I saw. this both as something. of a holiday, and the chance to get to know a little better my adopted. country.

As you can guess, MI5 followed me everywhere I. went during these six weeks. In Toronto, where I. started this trip in late May, I was spoken about by one youth to another with the words "hes an idiot", to. which the other replied,. laughing sympathetically, "good luck to him".

A couple of days later I went to Montreal. and stayed at the YMCA downtown. As. you can guess (this is all so predictable, isnt it?) MI5 followed me there and bugged my room at the. YMCA. Not only that, but they managed to set-up an. instance of "newscaster reaction" from a local television station; while I was watching a Vermont. TV news programme on the set in my room, the woman reporter said,. "well theyre just tired and they want to go home", which sounds like a pretty unprofessional. thing to say until you realise she was trying to. say of me that I was the one that was. supposed to be tired, and they (ie MI5) wanted me to go home to the UK.

On the. bus journey across the North American continent, it was quite clear that. MI5 were following me every step on the way. For the first part of the journey they actually. put someone on the bus with me, a youth who said at me "that guys paranoid" and tried to incite. other passengers to attack me. I stopped for. a couple of days in Winnipeg in central Canada, and on leaving the. town heard on the radio a female presenter ranting about "insanity! insanity!". It is very tiring travelling such. a long distance by bus; I took the journey in two steps, each of about 36. hours; and it is especially tiring when. you know MI5 are watching you and harassing you every step of. the way.

When I finally got to Vancouver, MI5 instituted. the usual harassment, in very short order. I was. surprised how quickly they were able to induce hatred towards me in elements of the general. populace; the Security Service must have. employed a number of agents and serious resources in a very short period of time; and for no real gain, because I. havent been back to BC. for almost five years, so all their "work" appears to be for nothing. In downtown Vancouver a street person said in front. of me, "theyre all talking about him". For. a few days I was staying at Pauls Guest House (345 W.14th Ave); on the day I left,. the owner Paul shouted at no-one in particular, "hes. going to Victoria" - which was quite accurate, I was indeed going to the. provincial capital Victoria on Vancouver Island. But I. had not told anyone at the guest house where I was going; I had only mentioned to my parents. back in England on the phone that I was going away from Vancouver for a few days.. Which leads me to suppose that MI5s bugging. of the phone in my parents house yielded the "intelligence" that I intended to. visit Victoria, and they had passed the information on to. Paul.

When I got to Victoria it was again obvious. that the persecutors were "doing their stuff" there as. well. On the street I was identified as being English, although I had not said anything. so my accent hadnt given me away; and returning by ferry to the mainland, I was. abused by a Canadian woman who said, "hes a nutter! you can run but you cant hide".. During my years in. Canada I have never heard the word "nutter" on any other occasion; I do not think it is. part of Canadians vocabulary; so the Canadian woman on the. ferry, who was obviously talking about me, must have been. supplied with this word by the English persecutors. And once I got back to Vancouver, staying at the Austin Hotel on Granville. St, I listened to a. conversation in the apartment block directly opposite, and a man saying, "hes paranoid, so thats as bad as. it can be, so why are they doing this. to him?".

Holiday. in the States, August 1995

By 1995 I was living in Canada,. and in August I went down the eastern seaboard to Florida and as far as Key West by car. As. you can guess (this is all. so boring and predictable, isnt it?) MI5 followed me every step of the way. I can see in. retrospect that this must have been quite easy for them as they had my car bugged, both on the inside. to listen to anything that was said and what radio. station I was listening to, as well as what must have been a tracker device installed to track. it across long distances.

The first city I visited was Philadelphia. In the old. Congress Hall where the first US Congress assembled, the woman guide started referring to. my situation,. saying that "all these people in Europe were watching it", and they were "a little paranoid" at this 18th-century experiment. in democracy. Also I had recently written a newsgroup post. where Id described a (female) poster as "wet-nosed" (implying "canine"),. and a young girl in Philadelphia remarked, "so he thinks were dogs?" There were. two or three more incidents during this holiday. in the eastern States, including a radio station down near Miami, showing. "they" had tracked me all the way there, and were bugging the. inside of my car; but I didnt record the details and Ive forgotten some of. it now. Also down in Miami Beach a French tourist in a lift expressed support for me. with the words, "cest incroyable" ie.. its incredible, meaning that MI5s well-known actions against me were. beyond belief.

To go back a bit, in about May/June 1995 Id visited New. York, again by car, and was insulted several times by people using. the same words that had been used against me in England. In. Central Park, and elderly Englishman (not a real gentleman - but then the Engish view. of themselves as "gentlemen" etc is quite laughable) looked at me and said "idiot".. And while. I was eating in a streetside restaurant a New York youth started laughing and. said something like, "I cant believe it, hes actually here" - I think. that was because I had had an expressed wish to visit New York for some years before this, although after this visit. I wont be going there again for a very. long time.

Visit to Poland December 1995/January. 1996

In. December 1995 I flew (BA again, unfortunately - every time Ive flown BA one of these incidents has happened, presumably MI5. is happier setting up harassment. on British-domiciled carrier) from Montreal to Berlin and travelled on to Poland to visit family. MI5 naturally. harassed me in

Poland during my. brief stay. They followed me around and got Polish people to take part in the harassment. In one case. two Polish youths talked in front of me saying in English. (with marked Polish accents), "fucked up men, fuck you". There were also other incidents which I. dont remember too clearly. since it was some time ago.

The return flight connected. through Heathrow, and in the transit lounge MI5 again set-up. harassment against me. In Poland they were talking their abuse in English, and in London they. set Polish people after me to speak in Polish; they heard me on. the phone to my father, and said "a wiesz ze to Polski wariat", in an almost sympathetic, inclusive. fashion (translation. "you know hes a Polish nutter"). Once on the. flight to Montreal I was again. set upon by two English youths, one of whom spoke and the other listened. The. aggressive "fat bastard" youth said, "if he wants to be. a wanker" (its my fault theyre harassing me, you see), self-justification that "hes a nutter". (so we have to keep on abusing him, because hes ill), as well as. talking about the town in Poland where I had been staying. He also said, "he doesnt know who we are", but. as already remarked in a previous article, that was at. best a half-denial of my guess expressed in internet newsgroups that. the people after me were MI5 - if anything its a. half-confirmation rather than a half-denial.

These incidents are still going on. You. can hear digitised audio files of abuse on a BA flight to Berlin in 1998 on the Web. at address

On this flight they were again attacking my mental health;. "paranoid, hes paranoid". and "nutter" are discernable. The last "during travel" contact was at Ottawa Airport. on 21 July 1998, when "Alan Holdsworth" the psychopath. MI5 agent, dressed as a vagrant, was pacing aggressively in the departure area. In three weeks. I will again be travelling to Europe; we will see what fresh acts of molestation. MI5 perpetrate during this trip.

MI5. are Afraid to Admit They're Behind the Persecution

MI5 have issued a formal denial of any involvement in. my life to the Security. Service Tribunal, as you might expect them to; but, more importantly, the persecutors have never denied that theyre. from the Security Service, despite several years of accusations. from my corner on usenet and in faxed articles. I. am not surprised that the Security Service Tribunal found "no determination in your favour".. I am however a little surprised that the persecutors have refused to confirm my. identification of. them; by doing so, they implicitly admit that my guess was right.

"No determination in your. favour" says the Security Service Tribunal

In 1997, I. made a complaint to the Security Service Tribunal, giving only the bare outlines of my case. I do not think it would. have made very much difference. if Id made a much more detailed complaint, since the Tribunal has no. ability to perform investigatory functions. It can only ask MI5 if they. have an interest in a subject, to which MI5 are of course free to be "economical with the truth". A couple of months after my complaint. the Tribunal. replied that;

The Security Service Tribunal have. now investigated your complaint and have. asked me to inform you that no determination in your favour has been made on. your complaint.

Needless to say this reply didnt surprise me. in the slightest. It is a well established fact that the secret service are. a den of liars and the Tribunal a toothless watchdog, so to see them conforming. to these stereotypes might. be disappointing but unsurprising.

It is noteworthy that the Tribunal never. gives the plaintiff information on whether the "no determination in your favour" is because. MI5 claims to have no interest in him, or whether they claim their interest. is "justified". In the 1997 report of the Security Service Commissioner. he writes. that "The ambiguity of the terms in which the notification of the Tribunals decision is expressed is intentional", since. a less ambiguous answer would indicate to the plaintiff whether. he were indeed under MI5 surveillance. But I note that the ambiguity also. allows MI5 to get away with lying to the question of their. interest in me; they can claim to the Tribunal that they have no interest,. but at a future date, when it becomes clear that they did indeed place me under surveillance. and harassment, they can claim. their interest was "justified" - and the Tribunal will presumably not admit that in. their previous reply MI5 claimed to have no interest.

"He doesnt. know who we are"

In early January. 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three. or four rows behind me, were two young men, one of them fat and voluble, the other silent.. It was quite clear that these two had been planted. on the aircraft to "wind me up". The fat youth described the town. in Poland where I had spent Christmas, and made some unpleasant personal slurs. against me. Most interestingly, he said the words, "he doesnt know who. we are".

Now I find this. particular form of words very interesting, because while it. is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had. my guess been wrong, the fat youth would surely have said so more clearly. What he was trying to do. was to half-deny something he knew to be true, and he was. limited to making statements. which he knew to be not false; so he made a lukewarm denial which on the face of it means nothing, but in fact acts as a. confirmation of. my guess of who "they" are.

On one of the other occasions when I. saw the persecutors in person, on the BA flight to Toronto in June 1993, one of the group of four. men said, "if he tries to run away well find him". But the other three. stayed totally quiet and avoided eye contact.. They did so to avoid being apprehended and identified - since if they were identified, their employers would. have been revealed, and it would become known that it was the. secret services who were behind the. persecution.

Why are MI5 So Afraid. to admit their involvement?

If you. think about it, what has been going on in Britain for the last nine years. is simply beyond belief. The British declare themselves to be "decent" by definition, so. when they engage in indecent activities such as the persecution of. a mentally ill person, their decency "because were British" is still in the forefront of their minds, and a process. of mental doublethink kicks in, where their. antisocial and indecent activities are blamed on the victim "because its his. fault were persecuting him", and their self-regard and self-image of. decency remains untarnished. As remarked in another article some time. ago, this process is basically the same as a. large number of Germans employed fifty years ago against Slavic "untermenschen". and the Jewish "threat" - the Germans declared, "Germans are known to be decent and the minorities. are at fault for what we do to them" - so they were able to retain the view of. themselves as being "decent".

Now suppose this entire episode. had happened in some other country. The British have a poor view of the French, so. lets say it had all happened in France. Suppose there was a Frenchman, of. non-French extraction, who was targeted by the. French internal security apparatus, for the dubious amusement. of French television newscasters, and tortured for 9 years with various sexual. and other verbal abuse and taunts of "suicide". Suppose this all. came out into the open. Naturally, the French authorities would try hard to place. the blame on their victim - and in their own country, through the same state-controlled media which the. authorities employ as instruments of torture, their view might prevail - but what on earth. would people overseas make. of their actions? Where would their "decency" be then?

This is why MI5 are so afraid to. admit theyre behind the persecution. Because if they did admit responsibility, then they. would be admitting that. there was an action against me - and if the truth came out, then. the walls would come tumbling down. And if the persecutors were to admit they were. from MI5, then you can be sure I would report the fact; and the persecutors support would fall. away, among the mass media as well as among the. general public. When I started identifying MI5 as the persecutors in 1995. and 1996 there was a sharp reduction in media harassment, since people read my internet newsgroup posts and knew. I was telling the truth. The. persecutors cannot deny my claim that theyre MI5, because then I would report their. denial and they would be seen as liars - but they cannot admit it. either, as that would puncture their campaign against me.. So they are forced to maintain a ridiculous silence on the issue of their identity, in the face of. vociferous accusations on internet newsgroups. and faxed articles.

Have MI5 lied. to the Home Secretary?

In order for the Security Services to bug. my home, they would either have needed. a warrant from the Home Secretary, or they might have instituted the bugging without a warrant. Personally I think. it is more likely that they didnt apply for a warrant. - I cannot see any Home Secretary giving MI5 authority to bug a residence to allow. television newscasters to satisfy their rather voyeuristic needs vis-a-vis one. of their audience.. But it is possible that the Security Service presented a warrant in some form before a home secretary at some point in the last. nine years, for telephone tapping or surveillance of. my residence, or interception of postal. service.

So the possibility presents itself that a Home Secretary might. have signed a warrant presented to him based on MI5 lies. Just as MI5 lie. to the Security Service Tribunal, so they might have. lied to a Home Secretray himself.. MI5 and MI6 are naturally secretive services former home secretary Roy Jenkins said, they have a "secretive. atmosphere ... secretive vis-a-vis the government as. well as [enemies]". Jenkins also said he "did not form. a very high regard for how they discharged their. duties".

It was only a few years. ago that MI5 was brought into any sot the extraordinary thing is that British media organisations. like the state- and taxpayer-funded BBC take such an active part in the. MI5-inspired campaign of harassment. We have after all heard of MI5 trying. to bribe broadcast journalists; but surely there must. be a substantial number who are not bought or blackmailed by the Security Services,. and who take part in the. "abuse by newscasters" of their own volition? The BBC is supposed to be independent of the government of the day as well. as the Establishment in general.. While perhaps it is childish to think that the BBC. is anything other than effectively state-controlled, the degree of collusion between the BBC and. the British Secret Police MI5 is something you would not find in many countries.. Individual tele-journalists in other countries would have enough self-esteem not. to allow themselves to be controlled by their. secret police - seemingly, BBC broadcasters like Martyn Lewis and Nicholas Witchell have such a low opinion. of their employing organisation that they see. no wrong in dragging the BBCs no-longer-good name through yet more mud,. at the mere request (whether supported by financial or other. inducements) of the British secret Police, MI5.

And when challenged, these broadcasters LIE about their. involvement, with just as little shame as MI5 themselves. The BBCs Information. dept have said. that;

"I can assure you that the BBC would never engage. in any form of surveillance activity such as. you describe"

which is an out-and-out lie. Buerk and Lewis have themselves lied. to their colleagues in the BBCs. Information department over the "newscaster watching", but unsurprisingly they refuse to put these. denials in writing. Doubtless if the "newscaster watching". ever comes to light, Buerk and Lewis. will then continue to lie by lying about these denials. So much for the "impartial" BBC, a. nest of liars bought and paid for by the Security. Services!

It is obvious that the persecution is at the instigation. of MI5 themselves - they have. read my post, and only they have the surveillance technology and media/political access. Yet they have. lied outright to the Security Service. Tribunal. Similarly, BBC newscasters Michael Buerk and Martyn Lewis have lied to members of their own. organisation. The continuing harassment indicates they are all petrified of this business. coming out into the open. I. will continue to do everything possible to ensure that their. wrongdoing is exposed.

MI5 Persecution Update: Friday 11 June,. 1999

Harassment in a pub. in Clapham, Tuesday lunchtime

Once a month, or once every other month, I meet a Polish. friends of mine who lives in Clapham. North, and sometimes we go to a particular pub near where he lives. The last time. was some two months ago; I did not have my minidisc-walkman with me, and consequently was seriously. harassed by people MI5 had instructed to harass me, in. the pub.

This Tuesday, 8. June 1999, we again went to the same pub for a pre-meal drink. This time I did have my minidisc-walkman with. me. As you can guess, we. were followed into the pub by a couple of young people (Im getting older and older - isnt it funny how the MI5 agents all look young. these days?). They started talking about my situation,. in particular some travel I had booked the. previous day. Unfortunately, they were talking fairly quietly, and my minidisc didnt pick up. their speech.

MI5s schizophrenic. reasoning is that simultaneously I am very important and. worthy of their acts of persecution, and I am also totally unimportant and their abuse. of me "doesnt matter". Perhaps they should test their agents and managers for obsessive personalities. or psychotic features in the same way as employees are drug-tested. MI5 might. lose their "worst cases" employees if some psychological testing were. applied to their recruitment. procedure.

Toothless Watchdogs. What. a Surprise.

Recently I have been engaging in communications with. two watchdogs, the Security Service Tribunal which deals with complaints against. the security service (and always. clears MI5 of any wrongdoing), and the Data Protection Registrar, which is. mandated to investigate misuse of personal data held on. computer.

In a letter to Nick Brooks, Security Service Tribunal. secretary, dated 20 April, I asked him if the Tribunal, as an allegedly. independent body, had the means to investigate. complaints against MI5 other than asking MI5 to themselves investigate complaints. To my disappointment, his reply. two weeks later answered the question. only indirectly, in the negative. Whatever the reader might think of the merits of the. case I have been putting before. you in faxed articles this last year and half, you will surely recognise that. it is a significant anomaly for the Tribunal to have. no independent means of investigating complaints, particularly given the view expressed even by previous home secretaries that the. security services. are untrustworthy.

MI5 Persecution: No Justice for the Victims of. MI5

In a previous article I detailed the similarities between the current. MI5 Persecution in England, and other historical. instances of similar persecution, notably that. by the Nazi Germans in the thirties and forties. The Germans persecuted first the. mentally ill, the epileptics and those suffering from. schizophrenia, then moved on to racial groups; in todays Britain the persecution is again. directed at those with mental illness, which the British in their cowardice. find easier than taking on racial groups as the Germans did. But just. as in Thirties Germany there was. no recourse against a malign and omnipotent state, so the MI5 Secret Police in the modern British Fascist State allow no justice for. their victims.

No Recourse. Against the Security Services Illegal Harassment

It has become apparent to me. over the last nine years just how loaded the dice are in todays Britain, a fundamentally fascist. country which masquerades as a democracy. Britain. is a democracy in name only; the Establishment, the defence and MI5. secret police are always there, regardless of which party has been voted into. power most recently - and from. "New Labours" conduct in office one finds it difficult to tell them apart from Old Tories, in their crackdowns on the sick. and vulnerable in society.

In thirties Germany the victims of the. Nazi regime had no legal recourse against their State oppressors; and in todays Fascist British state,. the victims of the Establishment and its MI5 Secret Police. similarly have no recourse against. the illegal state-funded and organised oppression. There is supposed to. be a mechanism for dealing with MI5 crimes, in the shape of the Security Service Tribunal. and Commissioner; yet these have never found favour of a plaintiff. One might as well ask the Nazi SS. to investigate crimes against epileptics or Jews as ask. the Security Service Tribunal to investigate MI5 crimes against British. citizens; it is quite obvious what the answer. is going to be, regardless of what you say to them, and what evidence you provide. The Tribunal and Commissioner. are a mere formality, a whitewashing body to give the Secret Services a veneer beneath. which they hide their. shabby criminality.

"Institutional. Racism" and Bigotry in the Metropolitan Police

The recent inquiry into the racist murder of Stephen Lawrence. found clear evidence of systematic and deliberate racism in the. Metropolitan Police, which cannot have surprised anyone. Commissioner Sir Paul. Condon accepted a somewhat lukewarm definition. of institutional racism as being "unconscious". In truth, and this truth must surely be obvious. to anyone who has any familiarity or encountered the great British police, the. Met has. not just "unconscious" racism, but very clearly "conscious" and deliberate racism, of the. kind that would have done Thirties Germans proud. And it. is a bastion of such open racism - when many other parts of society are learning to live in a multicultural environment, the. Met is still living in the past. in its attitude to the minorities.

But in. addition to the systematic racism confirmed by the Lawrence inquiry, there is also something much more relevant to. this case, which is systematic police. bigotry against the physically and mentally disabled, which I personally have. experienced in my dealings with the police over the years. You cannot expect equal treatment if you are. mentally disabled. I tried to make a complaint to the police in. 1995 about the harassment I had been subjected to for several years. As. soon as they found out I. had mental illness, they refused to even talk to me. I tried again in March 1999; the police made various. threats to me, while ranting about. "your paranoid rubbish" in reference to the complaints expressed to them.

The police refusal to do the job they. are employed and paid to do is extremely serious,. particularly as this case is highly important, indeed key to the whole issue of British self-perception at the end of the. 20th century and the beginning of. the 21st century. Britain has lost much in the last fifty years - it has lost an empire, it has lost its. self-respect and its identity as a. people. If the MI5 persecution finally makes it into the light and the. Security Services are seen for the rather cheap bullies their behaviour indicates,. it will have a massive and harmful effect on British self-perception in. the new century.

Security. Service Tribunal - Blatant Whitewashing

A few weeks ago I spoke on the phone to Nick Brooks,. the Secretary of the Security Service Tribunal, which is supposed to deal with cases. of MI5 transgression. I asked. him if the Tribunal had ever found in favour of a plaintiff and against the Security Service. He answered that as far. as he knew, it. had not.

I also asked Mr Brooks. if the Tribunal had any means of investigating allegations of criminal activity by MI5, other than. asking MI5 themselves if they had engaged in such activity. His rather circuitous written. reply states that the 1989 Security Service Act provides. that "it shall be the duty of every member of the Service to disclose. or give to the Tribunal such documents or information as they may require for. the purpose of enabling them to carry out their functions. under this Act". Which is a very round-about way. of saying - "No" - the Tribunal has no way of investigating. MI5 crimes - None At All.

Setting up the S.S. Tribunal, and creating. a Security Service Commissioner, was really an act. of falsehood by the government. It is generally recognised that MI5 are out. of reach of the normal criminal justice system - the. police, as we have seen, have no intesot answer to the government; in a previous article. I quoted Roy Jenkins speaking of "a secretive atmosphere.... secretive. vis-a-vis the government as well as [enemies]", and a "lack of. frankness" from MI5.

If the government wanted to, it could reform the. secret services and ensure they. acted in conformance with the laws which have been enacted for them in the. last ten years. But apparently the present government does not see any need to ensure security service compliance with the law. As. noted above, the regulatory machinery for. MI5 is deliberately weak; the Tribunal has no independent means of investigation,. and it is simply a waste of time complaining to the Tribunal. or Commissioner.

Every so often, fresh revelations come to light of secret. service transgressions. We have heard. from Shayler that MI5 bugged Jack Straw and Peter Mandelson;. we have heard from Peter Wright that MI5 plotted to see Wilson ejected from office; yet so closed is the system of. government that the law is never enforced against MI5 when they "bug and burgle". everyone from. politicians to ordinary citizens.

No Justice. from the Legal System, either

Britain has a civil and. criminal justice system which effectively limits many. complaints from being heard. For a civil complaint to be brought before. a court, you need a solicitor willing to act on your behalf. Supposedly it is possible. to represent yourself as a Litigant-in-Pthe basis of being "frivolous and vexatious". or "disclosing no cause for action in law". This is. exactly what happened to me in 1997 when I twice tried to. take the BBC to court for spying on me in my living room at. home; my case was twice struck out, and on the second occasion an order was made against me that I. could not bring further civil litigation against the BBC. without leave of the court.

As. the reader can guess it is quite impossible for a person with schizophrenia, who. complains about the secret services and media interfering in his. life, to find a solicitor willing to represent him in legal action against the. persecutors. I have quite a lot of evidence of the continuing persecution which I. have posted on the website, even if the evidence is quite tentative and perhaps. open to varying interpretations. But I have tried several firms. of solicitors; some of them have acted unprofessionally and abused me; all of. them have refused to represent me. My psychiatrist gave me the. name of the firm of Bindman and Partners. in central London, and I have approached them twice. On each occasion they refused to accept. my instructions. Plainly the problem with Bindmans, which they have admitted, is. their bigotry against mentally disabled. people; yet this is not just something that is wrong with Bindmans, it is. something that is wrong with the legal system as a whole, since the. legal system necessitates finding a solicitor willing to represent you in order. to bring a case to court, but it does not have a mechanism. for providing a lawyer in the case where no solicitor is willing to take on your case. So the British legal system is such. as to prevent cases such as mine from ever. receiving an airing in a court.

So much for the civil courts. But the criminal justice system is. no better.. Two years ago the Protection from Harassment Act came into force. But. again, while the Act is all very well on paper, in practice it is unenforceable in my case, since it would require Police action. to see the law implemented, and. if the police cannot even be trusted to conduct a murder investigation. competently (in the Lawrence case), then what chance is there. of their investigating complaints against the Security Service? Of course, it would. be possible for me to personally issue proceedings through a private prosecution either against MI5. themselves, or. against one or more of their media tools; but here we see the same problems as with the civil courts, because first of all. I would have to find a lawyer. willing to act on my behalf. Litigants-in-person do exist in the criminal courts, but the Attorney General can. bring such a prosecution to an end. by taking it over and entering a plea of "nolle prossequi"; and I suspect that if I were to bring a private prosecution against. either MI5 or one of their media tools, then this is exactly what. would happen.

So much for British justice. But if anything the wrongs that have. been perpetrated. on me by the British justice system are quite mild to what others have suffered. Others have been wrongly convicted based on. police evasions and lies, and spent many years in. jail based on false charges. I should count myself lucky that despite the best efforts of the MI5. secret police, I have not acquired. any criminal charges or convictions; which shows that for all their resources and influence, and the. clear imperfections in the British. legal system, there are still limits on how much subversion MI5 can. achieve.

The latest in. a long line of injustices

A comment. I heard during the recent scandal of the police mishandling of the. Lawrence murder investigation is that "its not as if the police themselves murdered. him". This is not a particularly wise statement to make. about the case, since it could be argued that the four alleged murderers were aided in their. crime by the expectation that the police would deliberately botch. the investigation - which of course is exactly what the. police did.

But. in my case, this would be a completely inaccurate thing to say - since the MI5. secret-police have expressly been trying to nine years now to see an end put to. my life, either by having me incarcerated and my liberty ended, or by forcing self-termination on me. It. is exactly as if the secret police "themselves murdered [me]", since that is. what their aim is in their. campaign against me.

The. public has heard of instances of police mishandling of cases, of police manufacturing evidence, lying in court,. extracting false confessions to clear up crimes, et. cetera. Various instances of extra-legal activity by the secret services. have also come to light in the last few years.. The unhappy truth is that what MI5 have been doing to me for the last nine. years is really nothing out of the ordinary for them. To me it seems unbelievable that this sort of systematic. campaign of harassment, which thousands and thousands of. people in this country and abroad. are well aware of, could exist for such a long period of time with the media maintaining "omerta".. But my case is not the first such instance of persecution by the "British secret police", and judging. by the lack of any real controls on MI5, I very much doubt. it will be the last.

MI5 Have Systematically. Destroyed My Life

This is getting depressing. From the feedback Ive received,. the recipients of these faxes are tired of hearing my. complaints, and in truth I am tired of sending. them. The reason I havent yet ceased sending faxes is because I cannot think of any other effective means of replying. to MI5s actions against me,. and I feel I have to do something to try to defend myself. Three/four years ago I got the MI5 harassment. out of my system by posting about it on Internet newsgroups, and. for a few months this tactic was quite effective - I received (and indeed still do today) support. from newsgroup regulars, and felt I could make my voice heard. and break the MI5 monopoly on access to the British media.. But that was years ago, and today nobody gives a. tinkers cuss about my internet posts - so I have sought to escalate matters by communicating. directly with the politicians who allegedly say how this country is. supposed to be run.

Of course, its quite expensive to keep up a campaign. of fax messages for many weeks. Each. set of faxes takes approx 50 hours to send over the weekend, and costs perhaps. 35. My phone bill for the last quarter was 350. These figures are naturally insignificant compared. to what MI5 have been spending against me over a similar. period. It also takes a lot of time. and energy to create a new article every week, and try and find new and fresh aspects and. viewpoints on MI5s persecution of me. I am beginning to run out of both new topics and energy. to write these articles.

So. I have a suggestion to put before the MI5 persecutors who have been wrecking my life since 1990. In a few days time I will be. going on holiday to Poland and Germany, for a couple of weeks. Previously,. almost every time. I have travelled by plane, or gone anywhere on holiday, the MI5 "wreckers" have been most assiduous. in destroying these trips. My suggestion is; if MI5 leave me alone on. this next trip, I will cease transmitting these articles. If,. however, there are any clear instances of harassment. (and I am very capable of recognising MI5 harassment when I see it), then. I will make public these instances and publish any recordings I may make of. them, and, unwillingly and unhappily, continue the articles.

Read about the MI5 Persecution on the. Web

Keith Hill MP (Labour -. Streatham), my elected representative, as ever refuses to. help.

MI5 Refuse to Allow me to have a Normal. Life

Its. kind of difficult to contemplate having a normal existence when you know. your entire house is bugged from top to bottom, for audio and, very unpleasantly, video; when your employment is. systematically destroyed, over. and over again; when every time you leave the country your travel is disrupted by MI5 plants on the plane yelling abuse. at you..... you get the idea. I would like to. have some semblance of a normal life, like my Polish and English friends do. But MI5. have made this impossible, and they have leached massive resources from the taxpayer to. institute a life not worthy of the name on. me.

A. few years ago MI5 were very open about their aims in persecuting me. They were shouting. "suicide" at me, both in Canada where I lived at the time, and during my occasional visits to London. You cant. get much clearer than that. There. have been instances as recently as a few weeks ago. of this intention being voiced by their side; on 15 April 1999, a woman at. the next ticket counter at the Royal Festival Hall said;

"it would. kill it, you know, it would just be overkill... they can't stop can. they"

meaning that "they" were trying to "kill it" i.e.. me and they "cant stop". The audio file. is at;

I wonder. why they "cant stop". Nobody (who doesnt know already) believes my claims - so. what difference would it make, if they were to "stop" persecuting me? Perhaps what this persons remarks indicates,. is the depth of the obsession MI5 have with this case. They have. chosen at random a person from. the general population, and done their worst to ruin my life. What is wrong with these people, that they persecute a national. of the. country whose citizens they are supposed to protect?

No Chance of a Harassment-Free. Job

Since. the harassment started in 1990 I have had three jobs, the first near Guildford, the second in Oxford, and the third overseas. in Canada. All three jobs have been systematically. destroyed by MI5. It is so ironic that MI5 employs a team of agents, each well compensated for. their efforts, to persecute just one person paid. a mere fraction of what they get for their "work". In fact, it is a joke that. MI5 is allocated resources for this sort. of effort. If this area of government were run along commercial lines then MI5 would be very rapidly. closed down, they produce nothing of any value, instead spending their time obsessed. with the bugging and surveillance of their former employees like Shayler, dangerous. subversives like Straw and Mandelson, and. "threats to national security" like yours truly.

Applying for. my first post university job

When I was applying for my first post-university job in the. closing months of 1990, I found. at two or three job interviews that MI5 had got there ahead of me. Interviewers knew what words to repeat. from what had been said at my home recently; MI5 had supplied them with words to. hurt me, and the "British secret. police" were trying to wreck my job search and discourage. me from joining the world of work. This and the continuing harassment in the media and by the. public meant that the search for a job took very. much longer than it would ordinarily be expected to take for a person. with my qualifications.

With my first job near Guildford came the. knowledge that MI5 were doing everything possible to make me lose the job. Despite. their efforts I managed to. stay in work for ten unhappy months, during which they made very clear to me that they were bugging my workplace, my. accomodation in Woking, my. car, my home..... and they also made clear that they had "got to". my employer in Guildford.

Employment with. Oxford

I was able to find a new job,. with Oxford Computer Training Services (now ARIS/Oxford), quite. quickly. But it became very clear, very quickly, that MI5 were treating. this job the same as the first; they tried to get the other employees and in particular the managers to. attack me. It was plainly MI5s intention that I be sacked fro this job.. But I was not sacked; instead, after almost a year of abuse. from OCTS managers, I was forced. to seek medical help, and had to take two months off for medical leave. OCTS MD Hugh Simpson-Wells was. motivated in keeping me on by the fear that if he sacked me, then. I would take him to court for the treatment. OCTS managers had meted out to me during 1992.

Emigration. to Canada

When I emigrated to Canada. in 1994, I did think that perhaps MI5 would leave me alone, given that I had made the effort to leave the UK and. try to find a new. life overseas. I could not see any reason why they would continue to harass me over in Canada. But clearly the MI5 agents. had their salaries to think about, since continue to harass me they most. certainly did, at my home in Ottawa, and. by getting fellow employees to speak against me, as had. happened with previous jobs in the UK.

MI5 are denying me a. future in work

Former Chief Constable of Devon and. Cornwall John Alderson had this to say regarding. MI5's activities;

"MI5 is not under the same restraints as the police. They. infiltrate organisations, people's jobs and lives. They operate almost like. a cancer."

Currently I am on disability, and I can see that MI5 are denying me. a future in work.. It would be an insult to logic for me to return to work and find. a job, in the knowledge that an entire team of MI5 agents, paid in total. many times what I would be earning, would have the objective of seeing me "done down" in the employment, and ejected from. the place of work. This situation is completely wrong. and nonsensical - I would very much like to have a job, but MI5 are preventing. me from even thinking about. returning to work. The culture of secrecy in MI5/MI6 means there is no objective oversight of their expenditure, when. external oversight and greater transparency might lead to wasteful and illogical operations. such as that against. me being shelved.

Watched and Harassed at my Home and. Accommodation

As you will. know if you have been reading these articles, MI5 have watched and harassed me. at my home, and at every accommodation Ive had since 1990. Theyve also. watched me at neighbours houses in London, and at short-term accommodation such as hotels. and bed-and-breakfasts. They have used the "words" gained from these. watching activities against me, by passing these. words on to other people such as OCTS managers for them to make clear that I am being. watched where I live.

Harassed at rented rooms. in Oxford in 1992

This was at. its worst in 1992 in Oxford, where during the week I lived at rented accommodation in. Oxford, and at weekends returned to my parents home in London. I was being severely. harassed by managers at my place of work, OCTS; and it was clear. from the things they said that they were being supplied by MI5 with. details of my home life, that they were being supplied with words to repeat. at me.

In 1992 I moved house in Oxford many times, living. at a total of five rented accommodations in ten months.. In January I started off living in a rented room at Headington near the. ring road / A40 intersection; then when it became clear that house was being bugged, moved to a. rented room in Botley, some miles away. It was at the. house in Botley that I had an "interactive watching" experience with. Martyn Lewis while he was reading the news; I threw a term of. abuse at him; he first flinched, then gave a gsult of what I had just said, he was no longer "on. my side".

So I moved house again. This time to a place. in Cowley, near the Rover car works,. where I stayed for a few weeks. Because of continuing harassment at work, I soon moved from this. accommodation, to yet another rented room on Iffley Road. By this time I. was very ill and being abused continuously at work. Again, MI5 followed me to the rented. room on Iffley Road, and created. new instances of "newscaster watching". There was a television in the room which I watched, and. as you can guess the newscasters got at me when I was watching the television. Also once I was assaulted,. if thats the word for what happened, on leaving the. house; a youth grabbed me by the coat lapels, roughed me up a bit with various terms of abuse.. I did not report this assault to the police,. because what was happening to me at work was very much worse, and. nobody seemed to think that that was worthy of being reported to the police. Later that day at. work, Alex G, a fellow employee, said "I heard he. was assaulted".... I had not told anyone at work about the incident that morning..... so once again it. was made very clear that. MI5 were watching my rented accommodation and giving information about. what was going on there to managers at work.

So I. moved house yet again in late autumn 1992, this time to a rented room in a large house on. Woodstock Road. I stayed there for several weeks as the situation at work deteriorated due to OCTS managers abuse, until. I was forced to take sick leave from work for two months. and attend hospital as an outpatient; at which point I gave. notice on the room, and returned to London.

MI5 continued to harass me after the diagnosis of serious illness. was made. As reported previously, they harassed me on a flight to. Spain in December 1992; and in 1993, when. I returned to live and work in Oxford, they again bugged my. rooms, as well as my workplace, although the intensity of the harassment. was very much less than in 1992.

Watched, followed. and harassed in Canada

It dismayed me to. find that MI5 would not leave me alone after I had settled in Canada. In January 1995 I rented an. apartment at the Bayshore complex in Ottawas west end. For some weeks there was no. sign of the "buggers". But then it started all over again. They first bugged. my car, which had a car alarm installed - the alarm went. off two or three times in a single evening, and the following day. gave a signal that the car had been broken into.. Then they bugged my apartment, and in particular they installed bugs on the phone line in. my apartment.

In September 1995 I moved to a new. apartment in Ottawas Bytown Market area, the restaurant and entertainment heart of. Canadas capital. This proved a serious mistake. In the west. end I had been fairly distant from the centre of town where MI5 concentrated their efforts at turning. people against me. In the Market area. it was much easier for the persecutors to motivate people to harass. me, and over the next couple of years there were frequent instances of harassment by. the general public.

From 1995 I had some Polish friends. in Ottawa, and as the reader can guess, MI5 have spent much effort trying to break up this friendship.. They supplied various things about my home life. to these friends, for example where I was living in the. Market, directly over the road were the studios of a music radio. station, which you had to "look up" to see; and MI5 told these friends that I was "looking up" to see the radio station;. so the friends then replayed these words back to me, that I was "looking. up". MI5 have also made various sexual slanders against me, and these. friends also unwittingly replayed some. of the words they had been imprinted with by the MI5. persecutors.

MI5 Will Never Allow. Me to have a Normal Life

I have. heard many excuses as to why MI5 continuously prevent me from having a normal. life. We are told that MI5 are defending the country against a tere to. zero.

When. I have travelled abroad, they always put their people on the flights, on the journeys I undertake,. to continue the harassment, so that I am put off further overseas travel, and chained to. my home in London. Yet even this is illogical, because. when I lived in Canada, they would still put people. on flights back to the UK.... and what possible reason would they have. for doing that? Perhaps the truest words to describe the MI5 persecution is that reason has nothing to do with their activities. - sane people do not behave in the way the MI5 British Secret Police have. been doing.

Summer 1999 -. more MI5 harassment?

In only. a few days time I will be going to Europe again. This time I have deliberately chosen to. travel by a non-UK airline; so we will see if they put their paid agents on this. foreign carrier, we will see if they try to harass. me on this non-British flight.

If they do harass me on. this trip to Europe, or if they resume the harassment in London. after I return home, then I will continue to report their activities in these faxes. As I said. at the beginning of this article, I would very much like. to not have to send these articles any more, but that is not my decision to make -. it is entirely up to MI5 to cease their pointless persecution of. me, once and for all.

MI5 Persecution. Update: Friday 9 July, 1999

Harassment. in Poland, July 1999

And still it continues.... in my last fax I said that provided. MI5 made no attempts at harassment during my two-week holiday this summer, or after. I returned to England, then I would discontinue. these faxes. Unfortunately MI5 have continued to harass me, both during the. holiday and after my return to London. I really dont want. to continue these articles, since they take up so much time and effort, not to. mention expense; but the Security Service wont even. let me have a holiday in peace and quiet, so I have. to make further efforts to bring their activities out into the open.

In early July I visited my. aunt and her family in Poland. On Saturday 3 July 1999, I. went to a family barbecue at an allotment outside the city. One. of my aunts family has previously shown himself to be in the "enemy" camp, by. saying the Polish equivalent of "something wrong with him", and various other. unprovoked insults. It is disappointing that one of. my family could forsake the usual ties of blood and take part in the actions against me, but thats the way it is. This guy turned. up at the barbecue, and started. making insults against me. In particular, he started to say something about the video camera which I had brought. along on the trip,. and the relevance of the video-camera to my fight against the persecution. It seemed pretty obvious to me that. my enemies had told him to turn up to this. occasion, and most likely schooled him in precisely what. words to say; since hes an unintelligent person and would not be able to think for himself. what insults to make against me.

Harassment in London, week ending Friday 9 July. 1999

Got back to London Wednesay afternoon. Two. incidents on the Underground returning. from the airport. Unfortunately I wasnt recording because I wasnt expecting trouble, so these. slipped through the net. One of these was verbal sexual abuse, of the type Ive heard many, many times. before these. last three-and-a-half years.

Yesterday, Thursday. 8/July/1999, I switched on Heart FM which had never "got at" me before.... and the. presenter started making jokes about "mad, crazy" etc. Again, wasnt recording this because Id never had. any trouble from this radio station and. wasnt expecting any.

Also yesterday,. on a bus (155?) from Balham to Clapham, a couple of girls started harassing me with taunts of "crazy". By now. I was expecting trouble and recorded an audio file of this instance of abuse, at. web URL;

The cynical reader might think my demeanour or behaviour. had given rise to the taunts of "crazy" recorded above. But I assure you my. behaviour on the bus would not have made anyone. think I was ill; and the taunts the previous day were the same sexual words as. previously; so I'm quite sure that. these incidents are either deliberately staged, or indicative of an overall high. level of awareness among the London public, particularly in the. part of London where I live.

Keith Hill MP (Labour - Streatham), my elected. representative, as ever refuses. to help.

MI5 Persecution:. Harassment through the Radio

One of the aspects of the MI5 persecution has been harassment. through the broadcast and print media; and. one of the aspects of harassment through

the broadcast media is being "got at" by radio. presenters. This being "got at" from the radio takes. various forms, the most obvious form being through overt or hidden words and. insults. But there are other, subtler forms. In. Canada a couple of years ago, I used to listen to the local radio stations every morning driving. to work, and listened to the music only, switching between radio station presets. rapidly as soon as a presenters voice came on, so that I would not be subjected to. any verbal harassment by the D.J.s. But they. found a way around this; they kept on playing the same song, every bl**dy morning at the. same time, which had the words "all coming back to me"; the perceptive reader. will remember that the words. "coming back" have special meaning (see the Private Eye cover at web URL;. for the
hidden. meaning).

And thats not the only time theyve allowed. the songs themselves to be used as abuse against me; many years ago Radio-1 in the UK did exactly. the same, and the DJ even made it explicitly. clear by saying, "dont you sometimes feel as. if the songs were made just for you".

"We should be done for attempted manslaughter". says Chris Tarrant

Capital Radio DJs have been "in on it" from the start. One of. the first things I heard in the summer of 1990 was from a Capital DJ. who said, "If he listens to. Capital then he can't be all bad" (supportive, you see. We're not bastards). Much of what came. over the radio in 1990 is now so far away the precise details have been obliterated by time.. No diary was kept of the. details, and although archives if they exist may give pointers, the. ambiguity of what broadcasters said would leave that open to re-interpretation.

In spring 1994, Chris Tarrant on. his Capital morning show made an aside to someone else in the studio, about a person he didn't identify.. He said, "You know this bloke? He says we're trying to kill him. We should be. done for. attempted manslaughter".

That mirrored. something I had said a day or two before. What Tarrant said was understood by the staff member in the studio he was saying it. to; they said,. "Oh no, don't say that" to Tarrant. If any archives exist of the morning show (probably. unlikely) then it could be found there; what he said was so out of context that he would be very hard put to find. an explanation. A couple of days later, someone. at the site where I was working. repeated the remark although in a different way; they said there had been people in a computer. room when automatic fire extinguishers went off and those people were "thinking of suing for attempted. manslaughter".

Pirate Radio "gets. at" me

In another incident in 1990/91,. Id been listening to a pirate radio station in South London for half an hour, when there was an audible. phone call in. the background, then total silence for a few moments, followed by shrieks of laughter. "So what are we supposed to. say now? Deadly torture? Hes going to talk to us now, isnt. he?" which meant that they could hear what I would say in my room.. Note the word "deadly" - they give away their. purpose.

It constantly surprised me that MI5 are so easily able. to subvert broadcasters, and, in this. case of the pirate station, to do so, so quickly. I think the answer to this question is that they. must have very wide contacts. in the broadcast media; presumably some or in fact many of those contacts are literally "bought". In the. same way as they tried to buy Jon Snow of Channel Four news, they. must have bought many broadcasters and use them both directly to. make insults against me, and promulgate their. points of view; but also, they must use these "bought" broadcasters to influence other television and radio presenters, who. might not even be aware that it was on MI5s behalf that they were being influenced. to "get at". me.

BBC-Radio-1 D.J.s celebrate my job termination. in November 1991

This is another one from the "early years". At the beginning. of November 1991 my. employment in Woking, Surrey was terminated. Chris Tarrant of Capital-FM had already made nasty remarks about both my. work for the company, and the managers. of the company themselves - "so theyre not really a serious company, well theyd have. to be to employ you wouldnt they".

So when I was terminated, as you can expect, BBC Radio 1. D.J.s celebrated.. On the Saturday afternoon (either 9/Nov/1991 or 16/Nov/1991 - I cannot remember precisely). I briefly listened to Radio-1 and heard the disc jockeys loudly proclaiming "youre useless, you should be. sacked". On the same day, I went down to the Kwik-Fit in. Tooting to get my cars tyres replaced, and in the office ran into a couple. of their staff, one of them with an Australian accent, who said "what do you think about. it then? Its getting killed on. the radio."

Plainly, if a random car-repair shop in Tooting. knew about the persecution,. then many thousands of other people across the capital and all over. the country must have known. And the phrase "getting killed" shows very. clear awareness of what the MI5 Persecutors intentions towards me. were in 1991, and judging by the continuing harassment, still remain. today.

Recent Feedback. from Virgin-Radio

As readers. will know, from mid-March 1999 for some four months, every weekend, I have bombarded. Westminster MPs with faxes about the terrible, all-encompassing MI5 Persecution. (Jesting aside,. it really is terrible and all-encompassing, in the UK anyway.). In June 1999, after I'd been at it some three. months, I started getting "covert" feedback from Virgin Radio.

The first. feedback I got was from Danny Baker, on Sunday 13th June. That weekend I was sending an article. which contained biting criticism of the police inaction. in this case. Danny Baker on his Virgin radio show started an angry rant that "he knows it's rubbish", ie.. he was rubbishing what I'd said. in that weekend's faxed article. Unfortunately I wasn't recording this. programme.

The next possible Virgin-Radio feedback was a. week later on 19th June 1999. This is contained in the. audio file above, in which Johnny Boy on his "Wheels of Steel". programme says;

"and. if you would like to put a triple play together, ahhh.... because quite frankly Hipster and me are running out of. ideas...."

He goes on to counter Hipster's "how. dare you" with a protestation that he is "only joking". You can listen to this incident on my. website at URL;

What I reckon is that. my article faxed to MPs that weekend was forwarded by one of the recipients to. Virgin Radio. My article had included the words;

"I. am beginning to run out of both new topics and energy to write these articles."

So what I reckon is that. Johnny Boy read the article.... and rephrased the above line "run out. of ... new topics" to "running out of ideas". I recognise that this. is a pretty tenuous inference to make.... but do listen. to the audio file, from the "ahhh...." pause in JB's speech you can guess he is about to say something "risky" and at. someone's expense. Anyway, I listen to the Wheels of Steel regularly and. will continue to do so, recording it as I always do - so. any future funny remarks. will get immortalised on my website! (There was a previous incident from August 1998 which is preserved. at web URL;

but I am sufficiently uncertain about it that I have not included. it in this. article.)

First Ever Radio Reference - Alan Freeman. of BBC-Radio-1

The first time. I was ever referred to on the radio was sometime in May or June. of 1990, by Alan Freeman of BBC-Radio-1. Note that this isnt an "interactive listening" episode, its different, this. was Freeman reading out a letter from one of my. "real life" enemies.

Id acrimoniously broken. up with some former friends in January of 1990, and I think they were still trying to cause. me trouble in June of that year. Freeman on his rock show read out a letter. from an "Andrew Turner"; one of my acquaintances from January 1990 had. been called Andy Turner, so I think its the same guy.. Freeman quoted Turner as saying various things about me, in particular Freeman said "thats. a hell of a letter you. wrote there Andy", "with a schizophrenic you're never alone", and something about the "one who wore out. his welcome with random precision" (from the words. of the Pink Floyd song).

When. I was looking for primary causes of the MI5 persecution, this letter which Freeman had read out on his programme struck me. as being potentially one of the. sources of the persecution. I know Turner and various others in that group were very bitter at. what they saw as their failure and my undeserved success, and they were quite. determined to upset the applecart. Of course. several other primary causes are possible; I do not know why MI5 chose me as. opposed to someone else, and MI5 are hardly likely. to tell me.

"Absolute Obscene" David Hepworth of. GLR

This one Ive. assigned a 100% rating on the website. There are actually two separate incidents, which are linked through the D.J.s. choice of words. The first incident can be heard in computer audio at web. URL;

On 21/Feb/1997, I was. listening to BBC GLR, by stealth. Back in 1990 I used to have Capital blaring. out of the speakers all over the garden ("if he. listens to Capital then he can't be all bad", thanks ever so much). But now I listen on. my walkman on headphones with the volume turned right down. It could not possibly be. overheard by any listening device, no matter how sensitive, because sound does. not carry from the phones.

Yet somehow they are still able to tell which station I am listening. to on the walkman. And last night, I bravely tuned. to GLR 94.9FM at around 8.45pm.. Everything went well for the first half hour or so. Around 9.10pm, Hepworth said the following after the song "Come Around" by. the Muttonbirds.

"coming up after this, we got the. rock-and-roll A-level, we have, I assume, Brian do we have an embarrassment of prizes in. there, we do, don't we, absolute obscene amounts. of prizes, there will no doubt be a riot at the back door, and that's, er, A-level coming up after. this"

The key phrases. in what he said are, "EMBARRASSMENT of prizes", and what he himself emphasized verbally,. "ABSOLUTE OBSCENE amount of prizes". It is my belief (based on content and tone of. voice) that when he spoke these phrases he knew I. was listening, and that the phrases refer directly to my situation. The "EMBARRASSMENT" is. the embarrassment he and other media people would feel at. having their wrongdoing exposed; the "ABSOLUTE OBSCENE". (which he verbally emphasized) described the disgusting sexual abuse which. the harassers have been throwing at me.

There was a. second incident, on 9/May/1997, which may be found on the web (with computer audio) at. URL;

This incident again. contains the words "absolute embarrassment of prizes", with the same emphasis. as the first instance, and laughter following the phrase. So theyre aware of. the complaint I made on Usenet after the first incident; and they are so. arrogant that they do exactly the same again. They are so arrogant, they know they are. being recorded and that what they say. will be published on the web, but they dont care. What corrupt media, and. what a corrupt country to have such corruption in its media.

Three Years. of "MI5 Persecution" Faxes

Ten Thousand. Faxes, and Still No Breakthrough

In the last three years I have sent at least 5,301. faxes directly from my computer, and 4,478 faxes through Demons. extremely useful TPC.INT service, to politicians and. the media, in the subject of the "MI5 Persecution". This has obviously. cost me quite a lot of money, not to mention time and effort. The aim. of all this communication has been to try to put discussion of the. "MI5 persecution" into the public arena; unfortunately, this aim has not been. achieved, yet.

This. fax will be my last transmission for the time being, since the summer recess is almost upon us. Depending on what the. persecutors do between now and the autumn, I may or may not. resume faxing later this year. In the article dated 18/6/99 I said Id stop the articles if MI5. left me alone; but they seem to have no fear of. these articles, since they kept pursuing. me in Poland and after my return to the UK. Again, if they leave me alone this summer then I wont have to. resume the articles in the autumn; but. I think its fairly obvious that MI5 have nothing better to do with their time than to go after me, and its almost pointless. to make this offer when I know they. wont cease harassing me.

TPC.INT. 1996, 1997, 1998.....

Three years ago I was living in Canada, and the only economic way. of sending faxes to the. UK was through the international email-to-fax gateway TPC.INT. This. highly useful and totally free service converts emails (which may. have Postscript-formatted attachments) into faxes which it delivers to any. number within the UK. Using the telephone book, I constructed a computer database of M.P.s fax numbers,. and used this database to deliver copies of. the "FAQ - frequently asked questions" article which Id written. some time earlier.

This service is still operational, but given that I have resided. in London for the last year, I do not need to use. Demons service when I can send articles directly from my own. computer using its fax/modem, which is what I have been doing since 1998.. However, instead of just sending the FAQ article, Ive been composing articles. on various aspects of MI5s treatment of me. Since their activities have been going on. for nine years now, and there have been various aspects. to their actions; they have harassed me at work, at home, through the media, etc; I have so far not run out. of things to say, particularly since their harassment of me is still ongoing,. and I have been able to record the actual words used by their paid. agents on my minidisc-walkman.. Since mid-March 1999 I have been sending these articles pretty. much every weekend.

Anyway, as mentioned above, I intend this to be the. final transmission before the summer recess, and it would be nice. not to have to continue these articles in the autumn. But thats something that depends on. them, not me, and. their attitude is unfortunately clear.

Why am I sending. these articles?

Because I want the. harassment to stop. The cynical reader might think from these articles that I "thrive. on adversity" and would be lost without the harassment to complain about; but. that is not the case. In a perfect world I. would like to return to work, in a job unsullied by MI5s attempts to ruin it; I would like to live in a house which wasnt. bugged, with my words being repeated at me wherever I go; I would like a normal life.. I do not particularly thrive on adversity; I am. beaten down by adversity; the purpose of these faxes is. to try to bring the whole matter out into the public arena, where the. rights and wrongs would be visible to all, and once that were to happen,. the adversity might cease. I have had something approaching a normal life a couple of. times in the last nine years, but always, in the end, MI5 turn up and ruin. it. I just want these people out of my life, permanently, and the only way of doing that is. to kick this business. into the public arena, and shame MI5 so that they are incapable of doing. me further damage.

Having said that,. unfortunately it seems fairly obvious by now that these faxed articles are not. going to achieve that aim. Some of the recipients know what I. am saying is true; but they choose to stay quiet - wisely, because if they were to admit the truth. of these articles, then they would bring the wrath. of MI5 down on their heads. Presumably most recipients do not know these articles are true; their reaction. to me is the same as my reaction to. the other apparently deluded people who have sent me email after reading my webpage to. tell me it happened to them too; the reaction being, "leave me alone, I. dont want to know". Its sad that many M.P.s have given me this reaction, because my case genuinely is different;. I genuinely am telling the truth,. and the harassment genuinely is happening to me,. and some recipients of this fax know this to be true.

"Write to your. own M.P."

My local M.P. is Mr Keith Hill, Labour-Streatham. He refuses to. have anything to do with me. He refuses. to represent me, he refuses to talk to me, he has. told me not to communicate with him. He has done absolutely nothing to help me, and he has told me he will. do absolutely nothing to help. me.

Other M.P.s, recipients of these faxes, have for. quite some time been telling me, "write. to your own M.P.". On 23 March 1998, Paul Burstow M.P. wrote to me; "Whilst I take. the issues that you raise seriously, there is a strict Parliamentary convention. that one Member of Parliament does not take up anothers. casework. Can I suggest that you write to your own M.P. at the House of. Commons?" Hopefully the above paragraph will make clear that I have written to. my own M.P. and he has proved unhelpful.

Other M.P.s have told me the same. thing. On 21 May 1998, John McFall M.P.. told me, "... there is a parliamentary convention that M.P.s do not take up cases of people not in their constituency...... therefore can I suggest that you write to your local M.P. who will be better. able to assist you." And. on 8 June 1998, Michael Foster M.P. wrote to me that "M.P.s. are inundated with unsolicited faxes .... M.P.s have a considerable amount of constituent work. to deal with, thus other M.P.s constituents cease to be. of concern in so far as they should have a voice and representation".

Simon Hughes M.P. wrote. to me on 5 November 1998, "There is a strict parliamentary convention which states that I am. not able to represent individuals who are not constituents of mine. My advice is. that you find out who your own. Member of Parliament is rather than circulating your story to all M.P.s.". To my suggestion that. Keith Hill M.P. was doing nothing to help me, George. Foulkes M.P. sent the following faxed response; "If. Keith Hill your own M.P. cannot help no-one else in the House of Commons can." But it is clearly not a case of "cannot". help, but "will not" help. I. have detailed in letters to Mr Hill specific ways in which he. could help me, first of all by finding a lawyer to represent me. It is Mr. Hills job as a Member of Parliament to represent his constituents; if he chooses not to do so, then. it reflects badly on him.

Kate. Hoey Sympathises, but says, "Write to your own M.P."

Here is part of a letter Ms Hoey sent. to me on 15 June 1999.

I appreciate that you have concerns about the. persecution and harassment that you feel you are experiencing but I note that your MP is. in fact Keith Hill.. There is a very strict Parliamentary code which means that M.P.s. can only take action on matters that relate to their own constituents. I. am aware that you are not happy with the fact that you do not feel Mr Hill will. assist you but I am afraid that I cannot take any action on. your behalf.

Ms Hoey plainly belongs in. the camp of people who do not know about the reality of the "MI5 Persecution". She doubts its. existence; "the harassment you feel you are experiencing". She urges me to see. Mr Hills assistance, as have other. M.P.s detailed above.

Really,. the fact that I am unable to obtain assistance from any other M.P., if my own alleged "representative" Mr Hill. chooses not to represent me, is a very basic. weakness in the Parliamentary system. Beinggmainly events at my former. employers in Oxford during 1992, when I was harassed constantly. by manager Steve Mitchell for most of 1992, and was forced to begin attending hospital as an outpatient as a result.. This harassment was obviously of Mitchells own volition, since I. observed him harass similarly another new worker two years later; but it was also at MI5s. instigation, since they kept providing him with. words from my home life which he then proceeded to abuse me with. Yet. this is not the only employment that MI5 have destroyed; the MI5 persecution has lasted from the end of. my student days until the present time,. during which I have had three jobs, all of which. have been in various ways destroyed by MI5s deliberate actions.

In March 1999 I. decided to try to force the issue once and for all. Ever weekend for the last four months, apart from two. weeks when I was on holiday, I have sent original articles by fax directly from my computer. to Westminster politicians. Here is a summary. of the articles of the last four. months;

How to Identify. the Persecutors

Their use of Schizophrenia to discredit. my claims
Comparing the MI5 Persecution with German. "Final Solution"
MI5 are. Plainly Trying to Kill Me
MI5 Waste Taxpayer Millions on. Pointless Hate-Campaign
Four Years of "MI5. Persecution" Posts on Internet Newsgroups
MI5. Agents are Clinical Psychopaths
BBC Newscasters. Lior the Victims of MI5
MI5 Have Systematically. Destroyed My Life
Harassment through the. Radio

To my deep worry these. fourteen faxed articles have still not achieved the objective of kicking the matter out. into the public arena and forcing an admission either from the persecutors, or from those "in the know",. which includes some. M.P.s.

I dont. really know what else to do to try to bring the "MI5 persecution" out. into the open. I would have expected that these weekly faxed articles would have had some effect,. but the only result has been M.P.s telling me to contact my own representative Mr Hill who refuses. to talk to me. I understand the convention that M.P.s. deal with their own constituents and not those of other M.P.s, but. there seems to be a gap in the process since it allows your own M.P. to refuse to deal with. you, and then you are totally. denied any representation at all.

Conclusion

The only conclusion I can. inform the readership of these articles of, is that there is no conclusion. to this matter, yet! Three years of intermittent articles, and four months. of faxes every weekend, have been absorbed by some of the most. powerful people in the country, to no effect.

Whether these. articles continue in the Autumn is entirely up to the "opposition". I offered them a cessation of. complaints if they would leave me alone on holiday in June/July, and they went right ahead. and harassed me anyway, on holiday and after I returned to London.. If MI5 cease their activities now, then I wont have to continue these faxes in. the autumn; but I suspect they wont cease, which means youre. in for more articles later this year. "There will be. no conclusion."

MI5 Want Me to Send You these. Faxes

MI5 seem to Want to Spin this Business out. for as Long as Possible

The MI5 persecution has now been going on, starting. from June 1990, for well over nine years. If I knew how to put an end to it. then I would do so. Of course MI5 have. indicated how they wish to finish the matter, by finishing me off; they indicated this very clearly years ago. when they were. shouting "suicide" at me.

But a. deeper truth is that the MI5 agents carrying out the persecution rely on it. for their income and their livelihood. They have absolutely no interest in anything other than spinning out the. whole business, because that is how they will maximise their earnings from. their employer for the "work" they. do against me.

A. vital part of the fantasy structure MI5 have created about me is that I am somehow a worthwhile. target. If you bother to read these faxes, if you browse. my website, or perhaps read my posts on the uk.misc newsgroup, you will have by now twigged that I am. a totally insignificant person who in a proper. dictatorship like East Germany would not merit five minutes of Stasi time. But Britain is improper in the methods of its corruption,. and the. Security Service seeks to present me as being a an evil fascist, an evil communist, an evil something-else, and even a. "national institution".

It occurs to me that. to some extent I am playing into their hands, into their scheme of things, by writing. these articles and sending these faxes.. By doing these things, I elevate my profile, and fuel MI5s paranoid obsession with me. But to stop sending faxes. would be to give up the only hope I have. of seeing their campaign "outed" and justice done. Certainly there is no point going to the police. again; and as remarked in a previous article, the. Security Service Tribunal routinely whitewashes every complaint. that is placed before it.

So although MI5 seems to want me. to continue sending these faxes, doing this is the only. real chance of getting this business out into the open. And so Ill continue trying to. kick down their house of cards. At least. my situation is less serious than that of some other victims of the secret services; unlike Shayler I am not. broke and exiled; unlike Fayed I have. not lost a son to the posited activities of the secret services. All I have lost is some of my health, some of my life, and. some of my possible career.

MI5s Abuse of me is without. Cause or Reason

It constantly puzzles me that MI5. refuse to leave me alone, wherever I go and whatever I do, or rather,. whatever I dont do, since Im not a very socially or otherwise active person.. When I am in England, they chase me all over the place, and once theyve found. me, they pay people to shout rude words at me. When I am in Europe, they. again chase me all over the place, and as usual pay people to shout obscenities at. me. When I am in Canada or visiting the States, they. faithfully chase me all over the place, and when they find me, pay people to shout. obscenities at me.

It is hard to avoid the conclusion that these MI5 operatives. who chase me are total lunatics. You will remember from a. previous articles the assessment "MI5 Agents are Clinical Psychopaths". They have tried. to blame me for what. they do and what they say; yet their lies have been wafer-thin, and are clearly seen to be. oiled by the money which they acquire from the Government, and ultimately from the. taxpayer.

They have tried various lies to put the. blame on me; "we have to abuse him because hes a nutter", as if there werent many tens of. thousands of other people. with schizophrenia in the United Kingdom. Their choice of abuse words is telling; subconsciously perhaps they realise that. it is they who are the "nutters", and they. try to project their own illness onto their target.

MI5 Operatives. have Nothing Else to Do With Their Time

Ive seen the same "Alan Holdsworth" person. three or four times over a period of several years. I saw. him at the Civic Hospital in Ottawa in the Emergency. Ward, where he falsely declared his name to be "Tad"; at Ottawa airport in. summer 1998; and on board another flight in 1995.

So what we see from. the above paragraph is, the same people are delegated to. watch me for many years. Without me, they wouldnt have a job. They literally have nothing else to do with their. time, except indulge their voyeurism against me. With this observation, we come to the. core of MI5s campaign against me; these people are not fit for any job. other than the exercise of voyeurism against me, and. if sanity were to land on MI5 then they would be out of a job.. If sanity were truly to land then these people and their employers would be prosecuted. for offences under the Protection from Harassment legislation,. which they are clearly breaking.

It is one of the ironies of their campaign that. MI5 have been trying to make me an object of. ridicule for completely trivial things I have done, while. MI5 themselves have simply not mentioned how ridiculous is their own behaviour. and that of broadcast media journalists, in spying on me while they read the news for example. If the whole truth. of this business is ever. exposed, and despite all my efforts it still seems there is a block on its exposure in Britain, then the rights and wrongs. will be clear to all, and no amount of MI5 lies will be able to. change that. MI5 presumably do realise just. how damaging such a revelation would be both to themselves, and to broadcast media. such as the BBC and ITN, because there has. not been even the slightest chink in the armour, despite four and a half years of my complaints on. internet newsgroups and by fax to politicians and. the media.

MI5s Final Kick in the Teeth to the. British State

For someone like myself born in the late sixties it. seems peculiar to think that Great. Britain once used to have a say in the destiny of foreign peoples in far-off sections. of the globe. Modern Britons tacitly accept the lowering of their country. to a third-rate power reliant on the United States for what little. say it has in the world. A third-rate power, now "reverse-colonised" by third world peoples it once. ruled and riven with internal problems so severe the government. hardly dares acknowledge them.

To this third-rate power the MI5 secret police are delivering. the final kick in the teeth through a. campaign of persecution which is guaranteed to hold the state up to ridicule throughout the world when it. is finally exposed. As a "thought experiment" suppose. the French or the Spanish security service had. done to one of their own born citizens what MI5 has done in this country. Suppose say the Spanish had planted hidden. cameras in his home, for the perverted pleasure of their. state television newscasters, just as hidden cameras have been placed. in my home for the perverted pleasure of Martyn Lewis, Nicholas Witchell et al.. Suppose the Spanish service had for nine years. been trying to force suicide on their target;. at times, so blatantly that they shouted the word "suicide".

Now suppose they were. caught.

Of course, as long as MI5 arent. caught, theyre laughing. The psychopathic security service agents gets their kicks from. shouting abuse at me; the newscasters, Lewis, Witchell. etc get their jollies, "it was so funny", we were watching. this bloke and he couldnt do anything about it.

But once theyre caught, the sky falls in. Of. course, the "patriotic" MI5-funded. media in Britain will try to put the best spin on the MI5/media activities; it was the targets. fault, of course. But most of the world bears no. allegiance to Britain. If this business is ever exposed then a weakened Britain will become the laughing-stock of. the world. And I promise you, the security services persecution of. me will be exposed. MI5 has. delivered a final kick in the teeth to the British state, and I will do everything I can to ensure the world hears about what. they have done.

Metropolitan Police Refuse to. Investigate the MI5 persecution

I have on a couple of. occasions tried to motivate the police to investigate MI5s actions against me. On. each occasion they have refused to do so. In 1995 I went to my local police. station and spoke to an officer there; he refused to. accept my complaint, and seemed interested only in seeing me. leave the station as quickly as possible.

Earlier this year I had some communications with Det.Sgt.Richards. of Charing Cross police. Again I asked him to. deal with MI5s actions against me. Unfortunately DS Richards conformed. to the negative stereotype of the bigoted, ignorant "copper"; he said, "I. have read your various bits on the internet. I'm afraid there is no substance. or credence to it. It's an absolute load of rubbish. I don't. investigate rubbish. I can't be more blunt or to the point. than that."

You have to wonder at the state of law enforcement in. Britain. If the victim of a murder is black, as happened in the. Lawrence case, the police deliberately botch the investigation.. If the victim of a crime is mentally ill, and the perpetrators are the secret services, as in my. case, then the police refuse to even begin to. investigate the crimes committed. Politically Britain is a third-rate country,. but from the point of view. of obtaining justice, Britain ranks down there with third-world countries. You almost feel that MI5 and their media. buddies would not even have any. shame if their activities against me were exposed; after all, why should they? they have the money, they have the control, OK. so perhaps theyve. broken a few dozen laws, but doesnt the fact that the police are too. corrupt to investigate these crimes, doesnt that prove that in fact no crimes have. been committed?

I should say again what I have said earlier in this. article. My losses over the last nine years have not been as great as those of other. victims of British Secret. Police malefaction. Fayed lost his son to their murderous activities;. in my occasional communications with former MI5/MI6 employees I have been informed that a. "permanent solution" is not uncommon for opponents of the British. secret police. I have lost health and financially, but am obviously. well enough to keep fighting my case. Others have lost. much more than I. If the joke which is British "law enforcement" refuses to enforce laws against. the security services then that is something that. is recognised in other countries and Britains stock correspondingly falls. Not that it has very far to. fall; the days when England had any say in the world are long. gone.

MI5 Want These Faxes. to Continue

Before the. holiday, I said that if MI5s harassment of me stopped, then I would cease. my complaints. They have known very well that if they continued to harass me then I would resume the fax. campaign in the autumn. Yet they have not stopped. persecuting me. Recently a woman outside my domicile screamed her head off with abuse in the direction of. my window; and on Saturday 2. October, when I was shopping at a nearby supermarket, a. man shouted the particularly vile sexual swear word which I have heard. many times before over the last few years.

MI5s attitude shows complete arrogance. Yet it also shows. that they want the faxes to continue and deliberately try to provoke me. into sending further faxes. The reasons for this are given in the. first paragraphs of this article; the MI5 operatives who persecute me have nothing else. to do with their time; to. make their campaign, against an apparently unreacting target, have some value, they have to force me to react. in some way against their actions; and by reacting in this way, by bringing. their campaign to the. attention of British politicians, I play into their hands, by giving their campaign. the attention and importance which they feel it deserves.

In. the short term, by sending these faxes, perhaps I am doing something they want me to do, but in the longer term it is. undoubtedly more in my interest than theirs for their activities to be exposed.. If their operatives truly. do wish to see these faxes continued then they are committing a serious mistake, because. it significantly increases the risk if M.P.s. (some of whom already know about MI5s activities against me) are advised. of my side of the story.

I will continue to. monitor and record the secret services activities against. me over the next few weeks. If they diminish and cease, as I hope they will, then I may be. able to call a halt to these faxes; but that it something which is entirely up to them; recently. their continued harassment makes clear that they do. wish the faxes to continue, and in all sincerity I do think they will continue their activities. and make it impossible for me to cease these faxes. It may trouble. you to receive these articles, but it troubles me much. more to be on the receiving end of a national persecution campaign; and while Britain does not have. free speech provisions as does Canada in the Charter of Rights. and Freedoms, and the US in the first. amendment to the constitution, in practice I do not think anyone is going to try. to have me locked up for speaking the truth. I still cherish the hope that the veracity I express will be. shown for what it is, and. that the truth will prevail and make me free.

Removing the. Mask of Anonymity from the MI5 Operatives

Undoubtedly one factor. encouraging the MI5 agents actions against me has been the fact that they can shelter behind. a mask of anonymity while they carry out their abuse. This is both. a sign of their realisation that their actions are. criminal; for crimes are harder to pin down and make a coherent complaint about when their perpetrators are unknown;. and it is a sign of. their cowardice, since they lack the backbone to say things to my face themselves; instead they almost always rely. on third parties to carry out the. actual acts of abuse.

On a few occasions. I have seen the perpetrators, but on each occasion they have managed. to preserve their anonymity. They travelled on the same British Airways flight as me in 1994;. but BA have ever since refused to give up the passenger list for the flight, and the police. and lawyers have proved useless in obtaining their identities from. the list. Also one of them followed me into. A&E department of Ottawas Civic Hospital a couple of years ago, and gave his name as (if I heard correctly). "Alan Holdsworth"; but. the doctor refused to give out his identity when I later tried to speak. to him.

If only we knew. the identities of the individual operatives, then it would be possible to find out the identity of their. employing organisation. But I think. we know the latter already, since I have been accusing them on internet newsgroups for four and a half years now, and they. have never denied my guess. Indeed, when I was travelling in January 1996 back. to Ottawa, two youths on the (British Airways again, unfortunately). flight made a. lot of noise at me, one of them saying to the other that I "didnt know who we are". That is a wafer-thin denial; I had been saying. for a year that they were MI5,. so a stronger denial would be necessary if my guess were truly mistaken. I think the lukewarm denial. was worse than no denial at all, since it confirmed my guess that the. employing agency was indeed. MI5.

Conclusion

It has been suggested. to me that by sending these faxes I could be making trouble for. myself; but I dont think so. My psychiatrist knows what I am doing; indeed I have given him a couple of these articles for. him to cast an. eye over.

I dont want to have to send faxes for the next year, or. the year after that. But that is entirely up to MI5.. If they continue to persecute me then I am forced into defending myself. The ball is in their. court, and it is entirely up to them what they do. If as I suspect. it is their intention that these faxes continue, if that is what. they insist will happen then so be. it.

MI5 Persecution Update:. Friday 31 March, 2000

22,544 Faxes Delivered in Three Years, and. Still No Breakthrough

In the last three years I have. sent at least 22,544 faxes to recipients in the UK, of which at least 13,974 have. gone to Westminster. Last weekend alone I sent 832 completed. faxes to politicians, the media and various others, on. the subject of MI5s mistreatment of me these last ten years.

I believe some of the recipients know of MI5s. actions against me in the last decade; yet they maintain. strict "omerta" in fear of the security services. persecution actions being made public.

MI5 Insist that these. Faxes must Continue

Between September 1999 and mid-January 2000, the persecutors, whoever. they might be, mostly left. me alone. I counted only three incidents in almost five months - which is a lower rate than. at any time since June 1990, when this business. started.

By leaving. me alone for several months, the "oppressors" were making an implicit assurance that they would continue to leave me. alone in the future. On 11 January I. posted to an internet newsgroup accepting what I saw as. their assurance of no further harassment, stating that I would cease sending these faxes -. which is the only thing I do in my defence - if they continued to leave me alone. And for two weeks. I did indeed refrain. from distributing these articles.

But MI5 acted in bad faith.. From the last week of January until the beginning of March, they resumed their hate campaign against. me with a vengeance. They even put people in my road three times in February,. one instance of which I recorded. They resumed their normal. behaviour of bugging my. phone and house, listening to where I would go, and then placing people in that location to "aggravate and annoy". me.

What MI5 did in February is plainly a contravention of the Protection. from Harassment Act 1997, since it has caused me "alarm and distress". as specified in. the Act. But it is a waste of time going to the police with a complaint, since the. police have done, and will do, absolutely nothing. I complained to the Metropolitan Police in 1995, and they refused to take. my complaint. When I complained again in 1999,. the detective sergeant laughed at my complaint, with the words, "It's an absolute load. of rubbish. I don't investigate rubbish. I can't be more. blunt or to the point than that." It is useful. to remember that the Met also treated Stephen Lawrences. parents with similar discourtesy; police prejudices are similar in my case, so I can take some. comfort from that case and hope that one day I will. get a fair hearing.

MI5. acted in bad faith, but they also acted with arrogance. They do not care if I send 800. faxes every weekend, since they know I cannot prove my claims, and the. recent Shayler case shows how weak external oversight is of the secret. services. But they acted with more than arrogance - the MI5 agents. actually want my faxes to continue, they insist that these faxes continue, since my communications give. them an excuse to continue their activities, and continue in the paid employ of the secret service.. Despite their use of diverse proxies. over the last ten years, it is the same MI5 officers behind the campaign. all the time - I have seen one of them on three. occasions in Canada over a period of years, and it is a safe belief that that same person continues to be paid for his "work" in. harassing me in London now. The average cost. of an MI5 employee is some 75,000 per annum, so. one may infer that their officers are amply compensated; their insistence. that "hostilities" are maintained is understandable when placed in this. light.

MI5 Persecution Update: Friday. 7 April, 2000

22,544 + 837. = 23,381

Last weekend I delivered another 837 faxes to politicians and the media. on the subject of the security service conspiracy which has. destroyed my life. This brings the total in. the last three years to at least 23,381. These totals do not include partially. delivered faxes.

Some of the recipients of these faxes must know. that what I say is true; and I hope to. motivate those people to acknowledge the reality of the harassment which has followed me for. ten years. It takes much time to transmit these articles, but as OCG MD Simpson-Wells said to me. in 1992, you have to be a good communicator. if you are to succeeed.

Harassment in. February 2000

Following a quiet period of almost. five months, the persecution resumed with a vengeance in late January/February 2000. At this time. I was at home in Clapham, London and was a relatively easy. target for the persecutors. They have my house. bugged, for audio and I believe video in some rooms as well; so they. can find out easily where I will be going on a particular day, and place people in that. location to mouth words of abuse at me. (I know the last sentence sounds like classic paranoia, but. it happens to be true, and some of the people reading this. know it to be true.)

On Friday 11 February 2000 I. went shopping in Croydon, to buy a watch at H. Samuels jewellers in the Whitgift Centre.. While I was there two youths came into the shop, one of them quietly uttered. an obscenity at me, and they immediately walked out. They. showed no interest in the shop.

That Sunday I met with a friend. in Clapham, who started needling me about "do you know anything about the CIA. and FBI?". Rather unsubtle, and worrying considering Ive known this guy for 20. years. From the words and demeanour of this. "friend" and others in February, I saw that the persecutors have again been trying to. separate from me what remains of my social. life.

Incidents in. my Road in February

MI5 very rarely place people in my home road. to harass me, but such was their persecutory. fervour in February that they did so on three separate occasions. On the first such occasion, I. was met my two youths who, grinning, said a deeply offensive sexual obscenity at me - at which. I coughed. at them, so they called me a "wanker". This incident is safely recorded on minidisc-walkman, but because of the offensive. nature of their abuse. the recording will not be made public.

Another incident very early. in the morning of Sunday 20/Feb/2000 occurred outside my home,. following an evening in Croydon with some schoolfriends. Again. there were two youths - for some reason the persecutors always travel in twos or threes,. very rarely is there just one of them - perhaps they need. a group to bolster their courage, perhaps just one of them wouldnt have the guts to. say something unpleasant. One of the youths said quietly, and bitterly, "shitty,. very shitty".

Anyway,. in March there were no further incidents near my house in in my road, and our. neighbours are very well disposed towards us, so let us hope that. the current quiet continues.

Chances are high that you have received a phish in your e-mail within the few months or even last week. By the time this book is published and into your hands, the operations that involve phishing scams will have accelerated due to aggressive malware propagation (trojans, viruses), automated botnets, and the overall infrastructure that has been established by these cyber-scammers.

So let's step back for a moment. Our world has changed significantly since I was a kid. Just 10 years ago, the sophistication of hackers and the tools available to them were somewhat limited from both the national and international security perspective.Yes, there was cyber-crime, no denying that, but not at the audacious level we are experiencing today. Breaking into computer systems was motivated by the need for exploration, information, and education.That was the world of the late-night, for-fun hackers, which are now but a memory (who would have thought we would be nostalgic for them one day!).

The hackers of the past are likely now working as information security professionals, attempting to close the very same Pandora's box they contributed to opening not too long ago.The knowledge contributed by hackers today, also known as security researchers, are molded by ethics and discipline; they are reticent to release their findings, not because of "controversial" activity but because of the responsibilities required to protect this double-edged sword. People hackers and researchers call script kiddies are the principal breed of criminals on the Internet today.They are usually young and not terribly creative or skilled at hacking, but they have three attributes that make them extremely dangerous: time, persistence, and proof-of-concept code written by the creative and skilled security researcher. These "kids" can and will scan the entire Internet, breaking into computers (also known as owning a system) and using your personal machines inappropriately and arbitrarily for their own purposes.

Ten years ago, most hackers were not looking at breaking into Windows desktops (since most of them ran on a 14.4kbps modem); they were usually targeting Windows NT and various flavors of UNIX systems.Typically targeting corporate and government computers, libraries, and universities, most cyber acts were usually performed with benign intentions and curiosity as the primary motives.

With the recent proliferation of broadband, the targets have shifted to literally anything and everything that is vulnerable. According to the Internet Storm Center (http://isc.sans.org), the average time for a default unpatched Windows box to survive uncompromised on the Internet is 20 minutes. But why break into my Windows computer if I have nothing valuable on there? The intentions behind of most "break-ins" today are utilitarian in nature, ranging from something as dense as using your machine for hard drive space and bandwidth to store and trade music files (MP3s) to supporting spammers' and phishers' activities (most of these compromises are in the form of automated malware).

--- Thank You ---

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= the. BBC, television and radio -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

The first incident in. June 1990 was when a BBC newsreader made what seemed to be a reaction to something. which had happened in my home, and out of context of what they were reading. My first reaction. was disbelief; nothing of the. sort had ever happened before, the idea that such a thing could occur had not crossed my mind, yet there was no doubt. of what had just taken. place. My disbelief eroded as this recurred time after time. Besides the. news, offenders included shows such as Crimewatch (!), Newsnight, and "entertainment" shows. There seems to. be very little moral understanding among the people who make these programmes; they. just assume they will never be caught, so they carry. on without a thought for the illegality or amorality of what they do. The only. time I ever heard a word raised in doubt was by Paxman being interviewed by someone else (I. think by Clive Anderson) back in 1990; referring to the "watching" he. said it troubled him, and when asked by the host what you could do about it, replied. "Well, you could. just switch it off" (meaning the surveillance monitor in the studio). He clearly didn't let his doubts stand in the. way of continued surreptitious. spying from his own or other people's shows, though.

Now you're convinced this is a troll, aren't. you? This story has been the subject of much. debate on the uk.* Usenet newsgroups for over a year, and some readers believe it. to be an invention (it has even been suggested that a group of. psychology students are responsible!), others think it symptomatic of a derangement of the author, and. a few give it credence. Quite a few people do know part. or all of the story already, so this text will fill in the gaps. in their knowledge. For the rest, what may persuade you of the. third possibility is that some of the incidents detailed are checkable against any archives of radio and TV programmes. that exist; that the. incidents involve named people (even if those hiding in the shadows have not. made their identity or affiliations evident), and those people may be. persuaded to come out with the truth; and that the campaign of harassment is continuing today both in the UK and on. the American continent, in a none-too-secret fashion;. by its nature the significant risk of exposure. increases with time.

On several occasions people. said to my face that harassment from the TV was happening. On the first day I worked in. Oxford, I spent the evening in the local pub with the company's. technical director Ian, and Phil, another employee. Ian made. a few references to me and said to Phil, as if in an aside, "Is he the bloke who's been. on TV?" to which Phil replied, "Yes, I think. so".

I made a number of. efforts to find the bugs, without success; last year we employed professional counter-surveillance people to scan. for bugs (see later) again without result. In autumn 1990 I disposed. of my TV and watched virtually no television for the next three years. But harassment. from TV stations. has gone on for over six years and continues to this day. This is something that. many people obviously know is happening; yet the TV staff have the morality. of paedophiles, that because they're getting away with it they feel. no wrong.

Other people who. were involved in the abuse in 1990 were DJs on BBC radio stations, notably disc jockeys from Radio 1 and other. stations (see the following section). Again, since they don't have sense. in the first place they can't be expect to have the moral sense not. to be part of criminal harassment.

-=-
-= MI5: bugging. and counter-surveillance -=

-=-

PO: >Did you ever look for the bugs in your house ? If not,. why not ? I mean if
PO: >I thought that was happening to me, I'd search the. place from top to bottom,
PO: >I mean I live there I would know if anything was out of. place. If I was
PO: >really suspicious, I would. call in one of those bug detection teams which
PO: >have those machines that pick. up the transmitted radio waves. This
PO: >reminds me of BUGS, that new programme on BBC1. on

That's exactly what we did.. We went to a competent, professional detective agency in London,. paid them over 400 quid to debug our house. They used scanner devices which go to over 1 GHz and would pick up. any nearby transmitter in that range, they also checked the phones and. found nothing... but if the tap was at the exchange, then they. wouldn't find anything, would. they?

CS: >Doesn't this suggest to you that there are, in fact, no bugs. to be found?

You can assume that they've done this sort of thing to other people in. more "serious" cases, where. they would know the targets would suspect the presence of electronic. surveillance. So they will have developed techniques and devices which are not readily detectable either. by visual inspection or by electronic. means. What those techniques might be, I couldn't guess.

In this case, the existence of bugging devices. was clear from the beginning, and they "rubbed it in". with what was said by the boy on the coach. It. was almost as if they wanted counter-surveillance people to be called in,. who they knew would fail to detect the bugging devices, causing loss of credibility to the other things I would. have to say relating to the harassment.

I did all the things someone in my situation would do. to try to find the bugs. In addition to calling in. professional help using electronic counter-surveillance, I. made a close visual inspection of electrical equipment, plus any. points where audio or video surveillance devices might have. been concealed. Of course, I found nothing. Normal surveillance "mini-cameras" are. quite noticeable and require visible supporting circuitry. It. seems to me the best place to put a small video surveillance device would be additional to a piece of. electronic equipment such as a TV or video. It would be necessary to physically break in. to a property to fit such. a device.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= Capital Radio - Chris. Tarrant -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

Capital Radio DJs have. been "in on it" from the start. One of the first things. I heard in the summer of 1990 was from a Capital DJ who said, "If he listens to Capital then he can't be all. bad" (supportive, you see. We're not bastards). Much of what came over the. radio in 1990 is now so far away the precise details have been obliterated by time. No diary was kept of. the details,. and although archives if they exist may give pointers, the ambiguity of what broadcasters said would leave that open. to re-interpretation.

In spring 1994, Chris. Tarrant on his Capital morning show made an aside to someone else in the studio, about a person he didn't. identify. He said, "You know this bloke? He says we're. trying to kill him. We should be done for attempted. manslaughter".

That mirrored something I had said a day or. two before. What Tarrant said was understood by the. staff member in the studio he was saying it to; they said, "Oh no, don't say that" to Tarrant. If. any archives exist of the morning show (probably unlikely) then it could be. found there; what he said was. so out of context that he would be very hard put to find an explanation. A couple of days later, someone at the site where. I was working repeated the remark although in a different. way; they said there had been people in a computer room when automatic fire extinguishers went off. and those people were. "thinking of suing for attempted manslaughter".

Finally, this. isn't confined to the established radio stations. In 1990 after I had listened to a pirate radio. station in South London for about half an hour, there was an audible phone. call in the background, followed by total silence for a few moments, then shrieks of laughter. "So what. are we supposed to say now? Deadly torture? He's. going to talk to us now, isn't he?", which meant that they could hear what I would. say in my room.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: cost of the operation -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

Here's what a couple of other people on Usenet (uk.misc) had to. say
regarding the cost of running such. an operation...

PO: >Have. some sense, grow up and smell reality. What you are talking about
PO: >would take loads of planning, tens of. thousands of pounds and lots of
PO: >people involved in the planning,. execution and maintenance of it. You
PO: >must have a very high opinion. of yourself to think you are worth it.

PM: >But why? And. why you? Do you realize how much it would cost to keep
PM:. >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man. team and a
PM:. >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in. shifts -- so it would
PM: >be six men at #20,000 (which with on-costs. would work out at more like
PM: >#30,000 to the employer.).
PM:. >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000. for the
PM: >supervisor. #220,000. Then you've got the hardware involved.. And
PM: >any transcription that needs doing. You. don't think the 'Big Boss'
PM: >would listen to hours. and hours of tapes, do you.
```

PM:. >
PM:. >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five. years. What are you doing that makes
PM: >it worth the while of the state to spend over one and a quarter. million
PM: >on. you?

Those are pretty. much the sort of calculations that went through my head once I stopped to consider what it must be. costing them to run this operation. The partial answer is, there have been periods. when the intensity has been greater, and times. when little has happened. In fact, for much of 1993 and. the first half of 1994, very little happened. Although I don't think that was for reasons of. money - if they can tap into the taxpayer they're not. going to be short of resources, are they?

The more complete answer is in. the enormity of what they're doing. Relative to the cost. to British pride of seeing their country humiliated for the persecution of their. own citizens, isn't is worth the cost of four or five people to try to bring things to a close in the manner they would. wish? To the government a million or two. is quite honestly nothing - if they can convince themselves of the necessity of what. they're doing, resources will not be the limiting. factor.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= how and why did it start?. -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

The harassment didn't start. by itself, so someone must have been there at the outset to give it a firm push and set. the "animals" after me. It looks as if I was set up in June 1990, and the timing. indicates someone from university. was responsible.

>One thing which. has been missing from this discussion is this simple
>prognosis: that maybe he is right and that, despite. his admitted
>mental condition,. there really is a campaign against him organised by
>now-influential ex-students of. his university.

In May or June 1990,. Alan Freeman on Radio 1 read out a letter from someone who. had known me for a few years, who wrote of the one who "wore out his welcome with random precision" (from the Pink Floyd song).. Freeman went on to say to the writer. "that's a hell of a letter you wrote there". The indication is strongly that people I had parted. from soon before nursed a grudge against me and were trying to cause trouble. for me.

The suggestion is that Freeman might have shown the letter. to other people, and things could. have snowballed from there. Right from the start the real source (security services presumed). didn't announce themselves as the origin, but let the "talkers", the radio DJs, believe. that they were the originators. Think about it; if you. announce, "we're MI5 and we have a campaign. against this bloke" then people might not go along with it; but if you say, "everyone else. is getting at this bloke because he 'deserves' it" then people will join in with. fewer qualms.

>Why would. "they" wish to assassinate your character?

It's the classic case of hitting a. cripple to prove you're stronger. Why would the security services expend hundreds of thousands of pounds. and more than six years of manpower to try. to kill a British citizen? Because they are motivated by people who knew me at. university and feel personal animosity; because they knew me to be emotionally weak,. and it is in the nature of bullies to prey on. those known to be weak; and because they can rely. on the complicity of the establishment, which the security services manipulate and derive funding from. This is England's. biggest humiliation today, and the British security. services are intent on preventing their humiliation becoming reality by. continuing their campaign of attempted murder to suppress the truth from. becoming public.

-=-=-=-=-=-=-=-=-=-=-=-=-
-= who knows about. it? =-
-=-=-=-=-=-=-=-=-=-=-=-=-

Many people know,. both in the establishment and media, and among the general public. Despite an absence of its target from the UK for. more than two. years, the echoes of paranoia can still be heard loud and clear from across the water. When it started in 1990, the only people who knew. were those in BBC television who were. spying on my home, and a few radio broadcasters. There were a few cases of. public harassment, but very little compared to the situation that developed a couple of. years later.

The list today includes BBC TV staff (newsreaders such. as Martyn Lewis, Michael Buerk, Nicholas Witchell),. people from radio stations such as Chris Tarrant of Capital and Radio 1 DJs, people. in the print media, but also many people in the. general public. All united in a conspiracy which breaks the laws. which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or. elementary respect for individual. rights.

The British police (obviously) do know the nature of. the harassment and in all probability the identity. of those behind it. Some time ago I made a complaint. to my local police station in London, without positive result. The UK police are. failing in their duty to see the law enforced in not checking. the abuse.

The article of which part is reproduced below was penned by. Bernard Levin for the Features section of the Times on 21 September 1991. To my mind,. it described the situation at the. time and in particular a recent meeting with a friend, during which I for the first time admitted. to someone other than my GP that I had been subjected. to a conspiracy of harassment over the previous year and a. half.

>There. is a madman running loose about London, called David Campbell; I have
>no reason to believe that he. is violent, but he should certainly be
>approached with caution.. You may know him by the curious glitter in his
>eyes. and a persistent trembling of his hands; if that does not suffice, you
>will. find him attempting to thrust no fewer than 48 books into your arms,
>all hardbacks,. with a promise that, if you should return to the same
>meeting-place next year,. he will heave another 80 at you.
>
>If, by now, the police have arrived and are keeping. a close watch on him,
>you may feel. sufficiently emboldened to examine the books. The jackets are
>a model of uncluttered typography, elegantly and simply laid out; there. is
>an unobtrusive colophon of a rising sun, probably not picked at. random.
>Gaining confidence - the lunatic is smiling by now, and the policemen,. who
>know about such things, have significantly removed their helmets. - you
>could do worse than. take the jacket off the first book in the pile. The
>only word possible to describe the binding. is sumptuous; real cloth in a
>glorious shade of. dark green, with the title and author in black and gold
>on. the spine.
>
>Look at it more closely; your eyes do not deceive you -. it truly does have
>real top-bands and. tail-bands, in yellow, and, for good measure, a silk
>marker ribbon in a lighter green.. The paper is cream-wove and acid-free,
>and the book is sewn,. not glued.
>

>Throughout the encounter, I should have. mentioned, our loony has been
>chattering away, although. what he is trying to say is almost impossible to
>understand; after a time, however, he becomes sufficiently coherent to. make
>clear that he. is trying to sell the books to you. Well, now, such quality
>in bookmaking. today can only be for collectors' limited editions at a
>fearsome price. - #30, #40, #50?
>
>No, no, he says, the glitter more powerful than ever and the trembling. of
>his hands rapidly spreading throughout his entire body; no,. no - the books
>are priced. variously at #7, #8 or #9, with the top price #12.
>
>At this, the policemen understandably put their. helmets back on; one of
>them draws. his truncheon and the other can be heard summoning
>reinforcements on his. walkie-talkie. The madman bursts into tears, and
>swears it. is all true.
>
>And. it is.
>
>David. Campbell has acquired the entire rights to the whole of the
>Everyman's Library, which died a lingering. and shameful death a decade or
>so ago, and he proposes to start it all over. again - 48 volumes this
>September and 80. more next year, in editions I have described, at the
>prices specified. He. proposes to launch his amazing venture simultaneously
>in Britain and the United States, with the massive firepower of. Random
>Century at his back in this. country, and the dashing cavalry of Knopf
>across the water,. and no one who loves literature and courage will forbear
>to. cheer.

At the time this article was written I had believed for. some time that columnists in the Times and other journalists had been. making references to my situation. Nothing unusual about this you may think,. plenty of people have the same sort of ideas and obviously. the papers aren't writing about them, so why should. my beliefs not be as false as those of others?

What makes this article so extraordinary is that. three or four days immediately preceding its publication, I had a. meeting with a friend, during the course of which we discussed the media. persecution, and in particular that by Times. columnists. It seemed to me, reading the article by Levin. in Saturday�s paper, that he was describing in some detail his "artist�s impression" of that meeting. Most. telling are the final sentences, when he writes, "The madman bursts into tears, and swears it. is all true. And it is." Although I did not "burst. into tears" (he seems to be using a bit of poetic licence. and exaggerating) I did try hard to convince my friend that it was all true; and I am. able to concur with Mr Levin, because, of course, it. is.

At the beginning of the piece Levin. reveals a fear of being attacked by the "irrational" subject of his story, saying. "I have no reason to believe that he is. violent, but he should certainly be approached with caution". This goes back to the. xenophobic propaganda of "defence" against a "threat" which was seen at the very beginning of the harassment. The. impression of a "madman running loose" who needs to be. controlled through an agency which assigns to itself the mantle of the "police" is also one which. had been expressed. elsewhere.

In the final paragraph. of this extract, his reference to Everyman�s Library as having "died a lingering and shameful death a decade or so ago". shows clearly what sort. of conclusion they wish to their campaign. They want a permanent solution, and as. they are prevented from achieving that solution directly, they waste significant. resources on methods which have been repeatedly shown. to be ineffective for such a purpose.

>in Britain and the United. States, with the massive firepower of Random
>Century. at his back in this country, and the dashing cavalry of Knopf
>across the. water, and no one who loves literature and courage will forbear
>to. cheer.

At the time this article was. written I had believed for some time that columnists in the Times and other journalists. had been making references to my situation. Nothing. unusual about this you may think, plenty of people have the same sort of ideas and obviously the papers aren't. writing about them, so why. should my beliefs not be as false as those of others?

What. makes this article so extraordinary is that three or four days immediately preceding. its publication, I had a meeting with a friend, during the course of which we discussed the. media persecution, and in particular that by Times. columnists. It seemed to me, reading the article by. Levin in Saturday�s paper, that he was describing in some detail his "artist�s. impression" of that meeting. Most telling are the final sentences, when he. writes, "The madman bursts into tears, and swears it is all true.. And it is." Although I did not "burst into tears" (he seems to be using a bit. of poetic licence and exaggerating) I did try hard to convince my friend that it was all true; and I am able. to concur with Mr Levin, because, of course,. it is.

At the beginning of the piece Levin reveals. a fear of being attacked by the "irrational" subject of his story, saying "I have no. reason to believe that he is violent, but he should certainly be approached with caution".. This goes back to the xenophobic propaganda of "defence" against. a "threat" which was seen at the very beginning of the harassment. The. impression of a "madman running loose" who needs to be controlled. through an agency which assigns to itself the mantle of the "police" is also. one which had been expressed. elsewhere.

In the final paragraph of this extract,. his reference to Everyman�s Library as having "died a lingering and shameful death a decade or so. ago" shows clearly what. sort of conclusion they wish to their campaign. They want a permanent. solution, and as they are prevented from achieving that solution directly, they waste significant resources on. methods which have been repeatedly shown to be ineffective. for such a purpose.

-=-
-= why won't the British police. do their job and put a stop to it? -=
-=-

The British police obviously do. know what is taking place. Besides my interpretations of what individual officers have. said which forces that conclusion, it would be inconceivable for them to be unaware. of something on. this scale.

If they know, then they will know that. the abusers have broken laws in the UK and abroad. Recently the. UK introduced laws against electronic spying which carry a penalty. of several years jail if caught. If the police know illegal harassment is taking place, and do nothing about it, then. they are failing in. their responsibilities.

Last Easter (1995) I went into the local police station. in London and spoke to an officer about the harassment against me.. But I couldn't provide tangible evidence; what people said, in many. cases years ago, is beyond proof, and without. something to support my statements I cannot expect a police officer to take the. complaint seriously.

The current situation with. regard to the police is not one which allows a breakthrough in dealing with the problem.. On the one hand, most individual officers at a local police station may not know about the ongoing. assaults, so a complaint at that. level will not yield results. Yet the police as an organisation do know of the harassment, and they must be. aware that a complaint has been. made at a police station. So it is clearly their duty to take preventative action against. the continuing molestation, but because the. criminals are operating on behalf of a state agency, the police are not carrying out their. duty.

-=-
-= abuse in. set-up situations and in public -=
-=-

Strangers in the street have recognized me on sight many times, and. shown awareness of the current thread of abuse. To give. you one example, in 1992 I was. seriously ill, and a manager at work somewhat humorously said that "it wasn't fair" that people were. bullying me. A few days later, I attended for the first time a clinic in London as an outpatient, and on my. way out was accosted by someone. who asked if "they had paid my fare", with emphasis on the. word "fare". He repeated the word several times in this different context; that they should have paid. my "fare", each time emphasizing the word.

For two and a half years from the time their harassment started. until November 1992 I refused to see a psychiatrist, because. I reasoned that I was not ill of my own action or fault, but. through the stress caused by harassment, and that. a lessening of the illness would have to be consequent to a removal of its immediate cause, in. other words a cessation of harassment. I also reasoned that since they were taunting me. with jokes about mental illness, if I were. to seek treatment then the abusers would think that. they had "won" and been proved "right". Remember, the constant theme of any persecution is, "we must destroy you. because you're X", whether. X is a racial or other attribute. In this case the X was "we persecute you. because you have brain disease". The similarity of this logic to Nazi attitudes to the mentally ill. is striking.

The same manager who'd said "it wasn't fair". asked me in winter 1992 why I didn't seek help from a. psychiatrist; was it, he asked, because "they would think they. had won" if I sought treatment? That was something I'd never said at work... again, taken separately it proves nothing, but. many such things over a. period of months proves conclusively that people in the company knew what was going on, and in quite. a lot of detail.

Usually harassment in public lacks the level of finesse. of "paying your fare". Most people's imagination does. not go beyond moronic parroting of the current term of. denigration. That is not surprising given the average level of the abusers; if they do not have. the intelligence to distinguish wrong. from right then neither will they have the capacity for anything other than mindless repetition of a monosyllabic term calculated. to fit into their. minds.

The first incidents of verbal. assault in public were in again in the summer of 1990,. although they increased in frequency and venom with time. In July 1990 the first public incident occurred on a tube train on. the Northern line. Two men and their girlfriends recognised me; the women sprang to. my defence, saying "He looks perfectly. normal, he doesn't look ill". Their boyfriends of. course knew better, and followed the party line; one of them made reference to an "operation", apparently to work at the tube. station but implicitly to a visit that I had. made to hospital a couple of weeks previously.

In August 1990 going home. from college, soon after getting on a tube train at Gloucester. Road I was followed by a group of four youths, who started a chant of abuse. That they were targeting. me was confirmed by other people in the. carriage, one of whom asked the other "who are they going on at, is it. the bloke who just got on?" to which the second replied "yes, I think so". I was tempted to reply, but as in every. other instance the abusers are enabled in their. cowardice by physically outnumbering the abused; any confrontation. would result in my being beaten up, followed by a complaint to the police that "he attacked us", and of. course he's ill, so he must have been imagining that we. were getting at him. Shitty, aren't they?

But the shittiness of the four. youths on the tube train is as nothing compared to the episode on the National Express. coach to Dover in the summer of 1992. While going on holiday to the Continent I was. verbally set upon by a couple. travelling sitting a few rows behind. The boy did the talking, his female companion. contributing only a continuous empty giggling noise. He spoke loudly to ensure other people. on the coach heard, always about "they" and "this bloke". but never naming either the abusers or the person he. was talking about. He said "they" had "found somebody from his school, and he was always really stressed. at school". They must have dug deep to. find enemies there; perhaps someone who dropped out of school, someone who didn't do too well later, who was jealous and keen to. get their own back? The boy also said "he was. in a bed and breakfast for only one night. and they got him". By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work;. other things. lead me to the conclusion that the company's offices were bugged for most of the 2 1/2 years that I was there,. so "they" would have known a room in the B&B had been booked. (But. I'll bet "they" didn't tell the company's managers their. offices were bugged, did they?).

After a few minutes of this I went back. to where they were sitting and asked where they were travelling. The boy named a village. in France, and the girl's giggling. suddenly ceased; presumably it permeated to her brain cell what the purpose. of the boy's abuse was.

This and other set-up situations. are obviously calculated to provoke a direct confrontation which would bring in. the police, with the abusers claiming that they were the ones attacked. Again in 1992,. outside the house where I was living in Oxford I was. physically attacked by someone - not punched, just grabbed by the coat, with some verbals. thrown in for good measure. That was something the people at work shouldn't have. known about... but soon after. a couple of people were talking right in front of me about, "I heard he was attacked". The UK police have a. responsibility for preventing assault occurring, but. they do not seem to take any interest in meeting that responsibility. I suppose. their attitude is that harassment does not come within their remit unless it involves physical assault,. and they will only become involved once that happens. That is of course. quite the wrong attitude for them to take, but as. I now understand, the police investigate only the crime they wish to investigate; if they. do not take your complaints seriously then there is nothing. you can do to make them take. action.

-=
-= purpose in publicizing it; censorship in uk.* newsgroups. -=
-=

The postings to uk.misc newsgroup generated a very defensive reaction. from
Usenet readers in the UK. So much so, that. they tried strenuously to
suppress what was being said, both by breaking the rules. of netiquette in
their responses on. the forum, and directly by action to revoke the account

from which. the postings were issued.

Yet the postings were within the normal. boundaries of behaviour for uk.misc,. and other less partisan spectators did not see justice in the censorship which was effected, as the following. excerpt shows;

:Karen. Lofstrom (lofstrom@lava.net) wrote
:>It does seem that the. frequency and the size of his posts are
:>approaching net abuse. However, IMHO, they aren't. quite there yet. If
:>his postmaster were to act in this instance, it would raise. troubling
:>censorship. issues.

The inescapable conclusion of the censorship. effected on the uk.* newsgroups is that the British are intent on their wrongdoing. remaining concealed, and therefore seek to subvert and suppress freedom. of speech, not only in their own country where the media shows xenophobic bias. and bile against all perceived enemies within and without, but. also in other countries which have their own statutes to guarantee the basic human. right of. free speech.

It is absolutely necessary to bring their hate. campaign out into the open where it can be placed under. scrutiny and the harassers seen for what they are. That is the only way of making it impossible for the. security services to carry it out. There is a wider dimension, though.. Xenophobia as demonstrated by British people and institutions over the. last few years belongs to the same stable as racial hatred. In one case, two youths. on a Tube train made that racism explicit by referring to their. victim as a "soft toy, not up to British Standards".. Doubtless others victimize partly on the basis of race (isn�t it odd that they chose to. torment someone who is not ethnically English?) while. expressing their abuse in terms of another genetic attribute,. namely mental illness. All xenophobia on a genetic. basis is wrong, but while racial insults are illegal, abusing the mentally. ill is neither against the law nor subject to similar condemnation when it. is exposed.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= my. response to the harassment -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

My first reaction in. 1990/91 was to assume that if I broke contact then they would not be able to follow and would lose interest. So. I did the things that have. been suggested by other people; I sold my television, stopped listening to the radio and tried to withdraw away. from the sources of abuse as much as possible. I reasoned that. they must have more important things to deal with and that normal people. would simply leave me alone if it were made difficult for them. to continue their harassment.

I reckoned. without the sheer vindictiveness of the abusers. They did not let up but. instead "got to" people around me, mainly people at work, to do their dirty work for them. I went to. see my GP, who refused to believe what he was. being told, and refused to direct me on to anyone who could be of practical assistance. It was not until. three years had passed that the GP admitted the matter. was outside his competence and suggested going to the police.

In the summer of 1994 we called in counter-surveillance experts. from a private detective agency to sweep. our house and telephone for bugging devices. They conducted a thorough. search and found nothing; but as noted above, since the existence of surveillance was being forced in my. face by the harassers, you would expect them to have taken the possibility of. a counter-surveillance sweep into account when planning. the type of devices to be. employed.

In Easter 1995 I made a complaint to my local Police. station in London, but the police have not expressed any intention to. do anything about the continuing. harassment ("we're not saying it's happening and we're not saying it. isn't happening" were the words used). I think the officer I spoke to at Easter wasn't aware of. it happening, although other members of the police force obviously. do know.

From April 1995 until the present. time the matter has been discussed in a lot of detail on the Usenet. (Internet) "uk.misc" newsgroup. That discussion has given birth. to the article which you are now reading. My hopes in posting to Usenet were that wider. publicizing would discourage the security services from continuing their harassment,. and "draw people out" into concurring with the truth of what was being said. Neither. of those have followed, but the discussion has served a purpose in. allowing this structured report to be. created.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= MI5: methods. and tactics -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

They deliberately set out to harass in a way that would resemble. the symptoms of schizophrenia, so that any report of the harassment would. be taken. as indicating mental illness and "treated" accordingly. They never show their own faces; they only work. through proxies, in the media, among the public, and by manipulating people in the. workplace. Since they do not declare their identity there is. no evidence to initiate legal action against the security services or anyone else. The. only people you can prosecute. are the proxies and they will deny knowledge of any conspiracy.

By repeatedly humiliating and. abusing the victim, they induced mental illness. This is the worst form of human. rights violation: making any statement of the harassment appear to be symptomatic of the. illness which they cause. through the harassment. That this can happen, and people collude by silence, is absolutely. horrifying.

From the beginning. in June 1990 they set a pattern of harassment which they have followed without change for the last six years. They paint. me as a "threat" to which people must "react" (shades of Nazi. persecution methods), while simultaneously portraying their. hate campaign on which they have spent over a million pounds of taxpayers� money as. a "joke".

The MI5 that breaks the law with the silent complicity. of the police is the same agency that is now seeking a role in the fight against. crime. Perhaps the real joke is the proposed involvement. in the implementation of justice of. an organisation which commits criminal acts with secrecy and disinterest for. the legal process.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= why the. security services? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

You may ask, why do I think the "they" referred to are the. security services? Is there any evidence that. there is a single source, as opposed to a loosely based. "whispering campaign" amongst many people? Even if there is. a single source, is there any evidence that "they" are professional "buggers" as opposed to amateurs, or perhaps people working for. a privately funded. organization?

a) As to the question of a single source versus something. more fragmented; it is quite obvious that there is a single source. from the way the campaign has been carried out. Since things have been repeated verbatim which. were said in my home, there. must be one group which does the watching and listening. Since on several occasions (mainly during travel). people have been planted in close proximity and rehearsed in what they were. to say, it follows. that someone must have done the planning for that, and again a single source. is indicated.

b) So why couldn't it be amateurs?. Why couldn't it be a private organisation, for example a private detective. agency paid to manage the campaign and undertake the technical aspects?. Some detective agencies are unscrupulous as has been proved on the occasions in the. past when they've been exposed or caught; they too can have access to the. bugging technology deployed; and there are reported cases of MI5 paying private eyes to. do their. dirty work (against peace campaigners and similar enemies of the state) on. the understanding that if they were caught then they could deny all knowledge. Why couldn't that be. the case?

The main factor pointing. to direct security service involvement (as opposed to amateurs or MI5 proxies). is the breadth of their access to the media in particular, and the fact that the television companies are so. involved in the campaign. The BBC would. not directly invade someone's home themselves, since it would not be within their remit. to allocate personnel or financial resources to do so. An organisation of their stature would not. take part in a campaign set up by private sources. The only people. they would take material from would be the. security services, presumably on the assumption that if the cat. ever flew out of the bag yowling it would be MI5 who would take. the consequences.

State. sponsorship for these acts of psychological terrorism is also indicated by duration; support for over six years for a team. of three or four people would be beyond the means and. will of most private sources. The viciousness of the slanders and personal denigration also. points to MI5; they traditionally "protect" the British state from politicians of. the wrong hue by character assassination, and in this case. are using their tried and tested methods. to murder with words an enemy they have invented for. themselves.

And there are precedents. Diana and Hewitt were alleged to. have been filmed "at it". by an Army intelligence team which had operated in Northern Ireland, these allegations were. made by someone called Jones who had been on the team. His statements were denied by the defence establishment. who tried to character-assassinate. by describing him as the "Jones twins". Funny. how if you tell the truth, then you must be ill, isn't it? Thought only communists behaved like. that?

Hewitt later said that he'd been. spoken to by someone in the army who revealed the existence of videotapes of him and Diana, and. that the tapes would be published if any attempt was made by them to. resume their association.

a) As to the question of a single. source versus something more fragmented; it is quite obvious that. there is a single source from the way the campaign has been carried out. Since things have been repeated. verbatim which were said in. my home, there must be one group which does the watching and listening. Since on. several occasions (mainly during travel) people have been planted in close. proximity and rehearsed in what they were to say, it follows that. someone must have done the planning for that, and again a single. source is indicated.

b) So why couldn't it be amateurs? Why couldn't it be a. private organisation, for example a private detective agency paid to. manage the campaign and undertake. the technical aspects? Some detective agencies are unscrupulous as has been proved on the. occasions in the past when they've been exposed or caught;. they too can have access to the bugging technology deployed;. and there are reported cases of MI5 paying private eyes to do their dirty work (against. peace campaigners and similar enemies of the state) on the understanding that if they were caught then they. could deny all knowledge.. Why couldn't that be the case?

The main factor pointing to. direct security service involvement (as opposed to amateurs or MI5 proxies) is the breadth of their access to the media. in particular,. and the fact that the television companies are so involved in the campaign. The BBC. would not directly invade someone's home themselves, since. it would not be within their remit to allocate personnel or financial resources to do. so. An organisation of their stature would not take part in a campaign set. up by private sources. The only people they would take material from would be. the security services, presumably on the assumption that if the cat ever flew out of the bag yowling it would. be MI5 who would take the. consequences.

State sponsorship for these acts. of psychological terrorism is also indicated by duration;. support for over six years for a team of three or four people would be beyond the means and will. of most private sources. The viciousness of the. slanders and personal denigration also points to MI5; they traditionally "protect" the. British state from politicians of the wrong hue by character assassination, and in this case. are using their tried and tested methods to. murder with words an enemy they have invented for. themselves.

And there are precedents. Diana and Hewitt. were alleged to have been filmed "at it" by an Army. intelligence team which had operated in Northern Ireland, these allegations were made by someone called Jones who had. been on the team. His statements were denied by the. defence establishment who tried to character-assassinate. by describing him as the "Jones twins". Funny how if you tell the truth, then you must be ill, isn't it?. Thought only. communists behaved like that?

Hewitt. later said that he'd been spoken to by someone in the army who revealed the existence of videotapes of him and Diana, and that. the tapes would be published if any attempt was made by them to resume. their association.

I found a solution: I used a ZIP 100Mb formatted as a Mac volume. It is accepted by Spectre and by my PC with TRANSMAC.EXE. So I can copy files in both ways.

Guillaume.
